Maryland, one of the central Atlantic States bounded N. by Pennsylvania, E. by Delaware and the Atlantic Ocean, S. and W. by Virginia and West Virginia. It lies between lat. 37° 53' and 39° 44' N., and lon. 75° 4' and 79° 33' W. The length from E. to W. is 196 m. and the breadth varies from 5 to 120 m.; area, 9,860 sq. m., or including water surface, 12,210 sq. m. Between the Chesapeake and the Delaware Bays and the Atlantic Ocean is a peninsular containing 5,980 sq. m. Of this the part belonging to Md., comprising 3,386 sq. m., divided into 8 cos., is called the "Eastern Shore." The "Western Shore" comprises another peninsula, lying between the Chesapeake and the Potomac R., and containing 3,698 sq. m. It includes the whole 6 cos., and parts of 3 others. Both the above sections are alluvial. To the N. and W. is a third district, which is crossed by the ranges of the Blue Ridge and the Alleghany Mts. Some of the most conspicuous summits are South Mtn., Sugar Loaf, Catoctin, Kittatiny, Rugged and Will Mts. The Susquehanna, which empties into the head of Chesapeake Bay, is navigable beyond the State line. On the Eastern Shore are the Elk, Chester, Sassafras, Choptank and Nanticoke, of which only the latter two are navigable. On the Western Shore are the Patapsco, navigable for 22 m., and the Patuxent, navigable for 50 m. The Potomac, which borders Md., for 320 m., is 7½ m. wide at its mouth. Vessels ascend it to a distance of 125m. Chesapeake Bay is 200 m. long, from 7 to 30 wide, and with its tributaries drains 70,000 sq. m. of territory. It is navigable for the largest vessels. Sinepuxent Bay, 30 m. long and from 1 to 5 wide, is very shallow, and the 30 m. of Atlantic coast afford not a single good harbor.—The Eastern and Western Shores are low and sandy, with occasional stagnant marshes, which are malarious. In the central and northwestern sections the loams and rich agricultural clays are unexcelled in adaptability to growing grains and the most exacting of the grasses; portions of the State, reposing upon limestone foundations, presenting some of the finest valleys to be seen on the Atlantic slope, whether the beautiful scenery, the fertile lands or the neatly kept farms be considered.—The position of Md., is a fortunate one as regards climate, escaping as she does the extremes of both heat and cold, but subject to the moderate alterations which conduce to health and vigor. Her climatic conditions are modified, the temperature of that part of the State between the ocean and the bay being especially moderated by the proximity of these great volumes of water, the influence of which is seen in the shorter winters and higher range of mercury than places on the same lines of latitude further inland. The mean annual temperature of the central part of the State is 56°, of the northern portions 54°, the high lands of the west 50° F.—The N.W. cos. contain inexhaustible veins of bituminous and semi-bituminous coal, mined by numerous corporations, and reaching the seaboard by the B.&O.R.R., and the Chesapeake and Ohio canal, the latter work connecting Cumberland, Md., and Georgetown and Washington in the district of Columbia. Iron is found widely distributed, and is worked in many large and well equipped establishments, some of the ores found being notably pure and valuable, including some deposits of specular and chromic iron. Copper is found in several localities, and a seam of gold-bearing quartz in Montgomery co., worked at times, is now being more systematically developed by improved processes and with new machinery. In the central and western parts of the State the surface is largely underlain by limestone rocks,

those in Baltimore co., N. of the city of that name, being magnesian in composition. Some of the strata in this co., and in Carroll, afford marbles of fine grain, great density and strength, which have been largely used in the public buildings in Washington and Baltimore. Other veins yield annually large supplies of lime for agricultural and building purposes. In 1880, 32 coal-mines yielded 2,227,844 tons valued at \$2,584,455. There were 13 iron mines, which produced 57,940 tons of ore, valued at \$118,050.—The main agricultural crops are the cereals, hay, tobacco, and fruit. The wheat lands of Washington, Frederick, Talbot, and other cos., are noted for producing a grain rich in gluten, thin coated, and peculiarly adapted for making flour for shipment to and through the tropics. The product of the cereals for the year 1880 was 136,667 bush. of buckwheat, 15,968,533 of corn, 1,794,872 of oats, 288,067 of rye, and 8,004,864 of wheat. Tobacco is a staple crop of the five S.W. shore cos., both narrow and broad-leaved varieties being now grown, the latter coming more generally into favor, as preferred by buyers. The crops are adapted to the manufacture of chewing and smoking tobacco, but the cultivation of sorts suitable for cigar wrappers is extending in the cos. of Cecil, Baltimore and Hartford, whose territory joins that of Pennsylvania, whilst the production of a lighter colored weed, cured by fire heat, and once largely grown in Frederick and Montgomery cos., is being yearly restricted, its quality falling below that formerly produced on new lands, and then much sought for exportation, mainly to the factories of Germany and Russia. The crop of tobacco for the census year 1880 was 28,082,147 lbs. The apple thrives in the high W. cos. and yields noble fruit, whilst in all the bayside cos., of both shores, peaches are extensively grown for market, the orchards exceeding in extent those to be found elsewhere. Many large pear orchards also exist, and these products, for weight, fairness of form, bright color and pronounced flavor, equal any grown. The grape finds a congenial home, not only on the mountain slopes of W. Md., but smiles amid the hills of Howard, and flourishes in the lower and more sandy soils along the waters of the bay. The preserving, by canning or packing, of fruits and vegetables, especially of the peach, but including varieties of the "small fruits," is a business of huge proportions in Baltimore and many of the towns on the bay and its tributaries, such establishments frequently working alternately, as the season requires, on fruit and oysters. In several cos. the feeding of cattle is largely pursued, and great numbers of lambs are raised in almost every vicinity accessible by rail or water. Dairying is an important branch of farming along the lines of the railroads, the daily demand for milk and cream from Washington and Baltimore requiring copious supplies. The number of live stock on farms in 1880 was 117,796 horses, 12,561 mules, 22,246 working oxen, 122,907 milch cows, 117,387 other cattle, 171,184 sheep, and 335,408 swine.—In the census year 1880 there were 13,748 men employed in catching oysters in Md., with wages and earnings amounting to \$2,538,000 during the oyster season on an average of \$184.60 for each man. Baltimore is the great centre of the packing trade. The number of vessels loaded with oysters which arrived at that port was 9,543, bringing 7,252,972 bush. (the average number of oysters in a bush. is abt. 175). In addition to this amount, there were 25,000 bush. brought by the bay steamboats, making a total of 8,277,972 bush. of which 3,769,353 bush. were packed raw, 2,689,939 bush. cooked and hermetically sealed, and 188,680 bush. used for local consumption. The amount of capital invested in the business is \$2,338,300, and the estimated value of the packing-houses \$1,360,966. The number of shuckers employed by the oyster-packers of Baltimore is 6,627, of which 4,167 are males

and 2,460 are females.—In 1880 Md. had, according to the census report, 6,787 manuf. establishments, employing 74,944 hands; capital invested, \$58,742,384; wages paid during the year \$9,725,962; value of materials, \$66,937,846; value of products, \$106,780,545. The principal industries were cotton goods, flour and meal, canned fruits and vegetables, iron and steel (see page 25), tanned and curried leather, sawed lumber, refined sugar, canned oysters and fish, copper and sheet-iron ware, tobacco and cigars, &c. There were 19 cotton mills working 2,425 looms and 125,706 spindles; capital invested, \$4,600,816; operatives, 4,086; cotton consumed, 51,537 bales; value of products, \$4,682,114.—There are 3 customs districts; Baltimore Annapolis, and Eastern (port of entry Crisfield), but the foreign commerce is carried on wholly through Baltimore which ranks 6th among the American ports in the value of exports and imports. The exports for the year 1880 amounted to \$76,220,870 and for 1882 to \$39,412,642; imports (1880) \$19,956,256, (1882) \$14,940,373. The entrance in 1882 were 915 vessels of 852,575 tons; clearances, 856 vessels of 802,627 tons. There were in 1882, belonging to the 3 customs districts, 1,921 vessels of 125,176 tons (sailing vessels 1,766 of 77,301, 153 steamers of 47,626 tons and 3 barges of 249 tons). During the year, 105 vessels of 6,000 tons were built. In 1882, Md. had 1,048 m. of railroad in operation.—According to the report of the commissioner of education for 1881, Md., had 11 universities and colleges authorized by law to confer degrees. There was 158,909 scholars enrolled in public schools; average daily attendance, 79,739; total expenditure for public schools, \$1,604,580. The State institutions are the penitentiary, the institution for the instruction of the blind, and that for the colored blind and deaf mutes at Baltimore co., and the institution for the education of the deaf and dumb, at Frederick.—The State is divided into 23 cos., viz.: Alleghany, Anne Arundel, Baltimore, Calvert, Caroline, Carroll, Cecil, Dorchester, Frederick, Garret, Hartford, Howard, Kent, Montgomery, Prince George's, Queen Anne, St. Mary's, Somerset, Talbot, Washington, Wicomico and Worcester. The incorporated cities are Annapolis (the cap.), Baltimore (the largest city and commercial metropolis), Cumberland, Frederick, and Hagerstown.—Md. is governed under the constitution adopted Sept. 18, 1797. The general assembly consists of senate of 24 members elected for 4 years and a house of delegate of 85 members elected for 2 years. Biennial meetings are held. The governor (salary \$4,500) is chosen for a term of 4 years. The State is divided into 8 judicial districts. The court of appeals consists of the chief justices of the first seven circuits, together with a judge elected by the people of Baltimore. Md. has 6 representatives in congress and 8 electoral votes. The public debt of the State in 1881 was \$11,257,560. The receipts into the treasury for that year were \$1,996,641; the expenditures, \$1,757,469. The assessed value of real estate and personal property was \$461,459,939.—The first settlement in Md. was made on Kent's Island, in 1631 by a party of Virginians under Capt. Wm. Claiborne (or Clayborne). The Roman Catholic "pilgrims of Md." landed at St. Mary's in 1632. Md. suffered much in the French and Indian wars. Her troops were active and efficient in the contest for independence. Congress met at Annapolis in 1783, and Washington resigned his commission. The State contributed 50,000 men to the federal army during the civil war. The battle of Antietam, Sept., 1862, was the most bloody engagement fought on the Md. soil. Pop. in 1660, according to McSherry, 12,000; in 1775, 200,000; in 1790, 319,728; in 1830, 447,040; in 1860, 687,049 (of whom 83,942 free colored and 87,189 slaves); in 1870, 780,894; in 1880, 934,943 (of whom 462,187 males and 472,756 females; 852,137 natives and 82,806 of foreign birth; 724,693 whites, 210,230 colored, 5 Chinese, and 15 Indians).

Massachusetts, one of the New England States, bounded N. by Vermont and New Hampshire, E. by the Atlantic Ocean, S. by the Atlantic Ocean and the States of Rhode Island and Connecticut and W. by New York. It is situated between lat. 41° 15' and 42° 53' N., and lon. 69° 55' and 73° 32' W. The length is 160 m. from E. to W. and the breadth 90 m. on the E. and 48 m. on the W.; area, 8,315 sq. m. The coast line is extensive, and deeply indented with bays, harbors, and sounds, chief among which beginning with the S.E., are—Buzzard's Bay, which is almost landlocked by the chain of the Elizabeth Islands, and has many small bays and harbors on its N.W. shore; Vineyard Sound, between the Elizabeth Islands and Martha's Vineyard; Edgartown and Nantucket harbors; Cape Cod Bay, three-fourths landlocked; Wellfleet Bay, Plymouth harbor; Duxbury Bay, Massachusetts Bay, and within it Boston harbor; Lynn harbor, Nahant Bay, Marblehead, Salem, and Beverly harbors; Gloucester harbor or bay, Sandy Bay, and Annisquam harbor. There are hundreds of islands along the coast, mostly small, but

Martha's Vineyard, Nantucket Island, and several of the Elizabeth group are of good size, the two former constituting each a co. by itself. The surface of the State is much varied, with rugged hills in the west, which attain to the dignity of mountains, and flat and sandy plains in the S.E. Two separate ridges of the Green Mts. of Vermont traverse the W. part of the State. The Taconic range, near and parallel with the New York line, has the loftiest peaks, Greylock, in Adams, reaching a height of 3,505 ft., and Mt. Washington (or Mt. Everett) in the S.W. corner of the State, an elevation of 2,624 ft. The Hoosac range, a few miles eastward of the Taconic, reaches an altitude of from 1,200 to 1,600 ft., and this is pierced by the famous Hoosac tunnel, five miles in length, at a point but a few miles S. of the Vermont line. Still further east, near the west bank of the Connecticut R. are two isolated peaks, Mount Tom and Sugar Loaf, the former 1,214 ft. in height, while across the river at a short distance is Mt. Holyoke, 910 ft. high. Near the heart of the State, in the town of Princeton, Worcester co., is Mt. Wachusett, 2,018 ft. in height. There are few navigable rivers. The Connecticut, which flows S. through the W. part of the State, is the chief, and admits of a limited commerce as far as the manuf. city of Holyoke, some 15 m. N. of the Connecticut State line. The Merrimack R. in the extreme N.E. of the State, is also navigable for a few miles from its mouth. The other principal rivers are the Housatonic, Hoosic, Miller's, Nashua, Blackstone, Concord, Taunton, Charles, and Mystic. None of these are navigable within the State, but they furnish a large amount of water-power. There are no lakes of any size, but numerous ponds are scattered over the State's surface.—Much of the land in Mass. is sterile. The valley of the Connecticut, however, is an exception, and many farms, particularly those near the large cities, have been brought up to a high state of productiveness by generous culture. The five western counties are largely given over to dairying, while tobacco is a crop of prime importance in the fertile valley of the Connecticut. The presence of numerous cities and manuf. villages stimulates the raising of great quantities of garden truck to feed their inhabitants. Dairying has been carried to considerable perfection; blooded stock is common, and the milk not required to supply the demands of the town population is converted into cheese and the sweetest and most golden of butter. Cheese making is now done in neighborhood factories, and the prospect is that butter, now generally made in the dairy of the farmer, will be made by wholesale in creameries, as already commonly done in parts of the West. The amount of cheese produced of late years has materially decreased, the farmers apparently finding butter making, or selling their milk outright, more profitable. A few thousand bushels of wheat are annually raised in the valley of the Connecticut. Corn for the home feeding of farm animals holds a conspicuous place in the mixed agriculture of the State. The following agricultural statistics of Mass. for 1880 are taken from the census of that year: Improved land in farms, 2,128,311 acres (tilled, 885,886; meadow, 1,242,425; unimproved land, 1,230,768; woodland and forest, 1,004,009; other 226,669). Number of farms, 38,406 (of which 24,386 under 100 acres each). Value of farms, \$146,197,415; value of implements, \$5,134,537. The principal products were hay 684,679 tons; milk, 29,662,953 galls.; butter, 9,655,587 lbs.; cheese, 829,528 lbs.; eggs, 6,753,679 dozens; tobacco, 5,369,436 lbs.; potatoes, 3,070,389 bush.; corn, 1,797,768 bush.; barley, 80,128 bush.; buckwheat, 67,117 bush.; oats, 645,159 bush.; wheat, 15,768 bush.; and rye, 213,716 bush. Total value of products, \$24,158,881. The number of farm animals was 59,629 horses; 14,571 working oxen; 150,435 milch cows; 96,045 other cattle; 67,-

679 sheep (exclusive of spring lamb); and 80,123 swine. Total value of farm animals, \$12,957,004.—The climate of Mass. is cool. The winters are generally long and severe, the summers short and warm. Snow falls usually during five or six months, and in rare instances exceeds six months. The amount of annual rainfall has been for a term of years from 40 to 43.5 inches, and is very equally distributed through the seasons. The mean annual temperature in the N.W. part of the State is 45°, in the S.E. part 50°. July is the hottest month in Boston, with a mean temperature of 73°; January the coldest, with a mean temperature of 28°. The mercury occasionally falls to 10° below zero, in winter, and rises in summer to 100°, thus showing a range between extremes in Boston of 110°.—The mineral productions of the State are few and limited. Anthracite coal is found and mined to a small extent in the eastern counties of Bristol and Plymouth. Gold, lead and copper have also been discovered here and there, but in insufficient quantities for profitable mining. Iron of excellent quality, however, is found abundantly in Berkshire co., where there are several furnaces for extracting the ore, and the same metal exists to a smaller extent in the eastern cos. of Bristol and Plymouth. Glass sand, white marble, plumbago, etc., are also products of Berkshire co.—As a manuf. State, Mass. stands third in the Union for the value of products and is by far the first in proportion to area and population. From end to end the State is thickly dotted with manuf. cities and villages. According to the census of 1880, there were in Mass. 14,134 manuf. establishments, employing 355,078 hands capital invested, \$280,175,753; wages paid during the year, \$121,103,705; value of materials, \$355,737,797; value of products, \$581,983,449 (on which total product Boston contributed \$123,366,137; Fall River, \$18,978,776; Lawrence, \$19,332,934; Lynn, \$25,216,778; Cambridge, \$26,124,023; Lowell, \$28,656,196, and Worcester, \$24,758,457). The following table exhibits the extent of the manuf. of the leading articles in 1880:

The fisheries of Mass. are of considerable importance. In 1880, according to the U. States census, there were 20,117 men engaged in the fishing industry, which employed 1,007 vessels of 81,089 tons, and in which a capital of \$14,334,450 was invested. The total value of sea products as sold was \$8,151,750, in which the value of products of the whale fishery entered for \$2,089,537. The most important centres of the

fishery industry are Gloucester, which far surpasses any other port of the country in the magnitude of its cod and mackerel fisheries, and New Bedford, which is the leading market in the U. States for the produce of the whale.—The foreign commerce of Mass. is of great magnitude. For commercial purposes the State is divided into 11 customs districts, viz.: Barnstable, Boston, Edgartown, Fall River, Gloucester, Marblehead, Nantucket, New Bedford, Newburyport, Plymouth, and Salem and Beverly. The number of vessels belonging to the several districts in 1882 was 2,252 of 429,092 tons (2,081 sailing vessels of 374,597 tons, 160 steamers of 50,922 tons, and 11 barges of 3,573 tons). The total imports amounted to \$70,216,970; exports, \$62,516,601.—In 1882, Mass. had 1,935 m. of railroad in operation, which, on proportion to its territory, is more than any other State in the country. Nominally they belong to 61 corporations, but the railroads in the State are controlled by 31 distinct boards of direction.—The Mass. system of public schools is most excellent. Every person having under his control a child between the ages of 8 and 14 years is required to send it to school at least 20 weeks annually, under penalty of a fine not exceeding \$50. Cities and towns must provide truant schools and appoint truant officers, who shall cause the confinement for instruction of habitual truants between the ages of 7 and 15 years. Moreover, there are laws prohibiting the employment of children in manufactories to the neglect of their education. Two agents are employed in visiting the schools of the State for inspection and improvement. In many of the cities and towns text books are furnished free to the pupils in the public schools. The schools are supported by local taxation. The secretary of the board of education for the year 1880 reports 6,570 public schools in the State, with 306,770 pupils, taught by 8,595 teachers. The average attendance was 89 per cent., and the average cost per pupil \$14.54. There are 5 State normal schools for the training of teachers. These are located at Westfield, Salem, Framingham, Bridgewater and Worcester, and in addition there is a normal art school at Boston. In the way of colleges, universities and schools for professional training the State is richly provided. Harvard university at Cambridge, established in 1636, is the oldest and most important of collegiate institutions; Williams college at Williamstown, in the extreme N.W. part of the State, founded in 1783, and Amherst college at Amherst, established in 1821, come next. Of later date and less importance are Tufts at Somerville, near Boston, Boston university, and the Roman Catholic college of the Holy Cross at Worcester. Beside these are two recently established and well endowed institutions for women—Smith college at Northampton and Wellesley at Needham. Of theological schools there are no less than 7. Andover is the seat of orthodox Congregational theology; the divinity school connected with Harvard university is Unitarian in its bias; the Baptists have a school at Newton, the Universalists one in connection with Tufts college, the Episcopalians one at Cambridge, and the Methodists one in connection with Boston university. There are law and medical schools attached to Harvard and Boston universities. There is a college of pharmacy at Boston and a couple of dental schools in the same city. Scientific agriculture is taught at the Massachusetts agricultural college at Amherst, and enters into the scope of the Massachusetts institute of technology at Boston, the Lawrence scientific school, and the Worcester county institute of industrial science at Worcester. Mass. is also well supplied with charitable and reformatory institutions. There is a large State reform school at Westboro, an industrial school at Lancaster, and a primary school for the State's waifs at Monson. There is a large new State

prison for men at Concord and one for women at Sherborn, a big almshouse at Tewksbury, a workhouse at Bridgewater; and three large and expensive insane asylums are located at Worcester, Taunton and Northampton.—The State is divided into 14 cos., viz.: Barnstable, Berkshire, Bristol, Dukes, Essex, Franklin, Hampden, Hampshire, Middlesex, Nantucket, Norfolk, Plymouth, Suffolk and Worcester. The incorporated cities are Boston (cap. of the State and commercial centre of New England), Chelsea, Fall River, Fitchburg, Gloucester, Haverhill, Holyoke, Lawrence, Lowell, Lynn, New Bedford, Newburyport, Newton, Salem, Somerville, Springfield, Taunton, and Worcester.—The constitution of 1780, as several times amended, is still the supreme law of the State. The legislature consists of 40 senators and 240 representatives. The governor (salary \$5,000) and other executive officers, as well as members of the legislature, are elected annually. The supreme judicial court consists of 7 judges; chief justice receives a salary of \$6,500 and the others \$6,000. The superior court has 10 judges, salary \$5,000, except the chief justice, who receives \$5,300. All judges are appointed by the governor for unlimited time. The State debt in 1881 was \$32,799,464, sinking fund \$14,285,781. Aggregate net indebtedness of municipalities in Mass. in 1881 was \$65,408,691; val. of real estate and per. prop., \$1,684,239,976; percentage of the debt to the total property valuation, .039.—In 1602 a company of English colonists landed on the Elizabeth Islands, but soon abandoned their settlement. The Pilgrims landed at Plymouth Dec. 22, 1620. Another colony was established at Salem in 1628, and both colonies united in 1692 under one government, including Maine. Meantime, the natives had not quietly submitted to this invasion of the white man, and many fierce and sanguinary contests occurred between the settlers and the savages. In 1675, an Indian chief, named Philip of Pokaneket, or King Philip, collected a large army and began a war which had for its object the entire extermination of the English. This war lasted for 3 years, attended with severe loss on both sides, and only ended by the death of King Philip himself. From this time until the war of independence, Mass. enjoyed a period of comparative peace and prosperity. Her enterprise, her rapidly increasing population, and her independent spirit seemed to have excited the jealousy towards her, and they sought occasion to humiliate her. Oppressive measures of taxation were devised, her commerce was hampered by restrictions, and large bodies of troops were kept upon her soil. Every measure of oppression was resisted, and the other colonies were appealed to for sympathy and harmony of action. The Boston massacre of 1770 increased the excitement of the people, and the destruction of the tea in 1773 in Boston harbor, the opposition to the post bill in 1774, the representation of the colony in the general congress, the seizure of the arsenal at Charlestown by the militia, and its reorganization there as a provincial congress, were the most prominent of the many events which immediately preceded the resolution. The first blood of the revolutionary war was shed at Lexington and Concord on April, 19, 1775, the battle of Bunker Hill on June 17, of the same year followed, and Mass. was fairly involved in the great issues of the war more than a year before the declaration of independence. The constitution of the U. States was ratified in Jan. 1788, by a State convention, by a vote of 187 to 168. Maine was separated from Mass. in 1820. Pop. in 1790, 378,787; in 1820, 523,159; in 1840, 737,689; in 1850, 994,514; in 1860, 1,231,066; in 1870, 1,457,351; in 1880, 1,783,085 (of whom 858,440 males and 924,645 females, 1,339,594 natives and 443,491 of foreign birth; 1,763,782 whites, 18,697 colored, 237 Chinese, and 369 Indians).

Memphis, Tenn., a city, port of delivery, and the cap. of Shelby co., situated in the S.W. corner of the State, on the Mississippi R., just below the mouth of Wolf R., on the fourth Chickasaw bluff, 780 m. above New Orleans, 420 m. below St. Louis, and 190 m. S.W. Nashville. It is the second city in the State in point of popularity, and the principal place on the Mississippi between St. Louis and New Orleans. The bluff on which the city is built is abt. 35 ft. above the highest floods. The streets are broad and regular, and lined with handsome buildings. Many of the residences on the avenues leading from the river are surrounded with beautiful lawns. The city extends over 3 sq. m. In the centre there is a handsome park, filled with trees, and containing a bust of Andrew Jackson. There are two theatres seating 800 and 1,000 persons respectively, 35 churches 7 insurance companies having State charters, a board of health, chamber of commerce, cotton exchange, and railroads making connections with all prominent points N., S., E., and W., enable the city to carry on an immense trade with all parts of the U. States. The railroads centering at Memphis are C., O.&S.W., L.&N., M.&C., M.&L.R., and M.&T. Lines of steamers run to St. Louis, Cincinnati, Vicksburg, Napoleon, Ark., and to the Arkansas, White, and St. Francis Rs. Cotton is the chief and absorbing article of commerce. For the year 1880 the receipts of cotton amounted to 409,809 bales, valued at \$23,752,529. The annual value of the total trade of the city is abt. \$75,000,000. The principal manuf. are 5 large foundries and machine shops, with several smaller ones, extensive wood-works, a tobacco factory, a furniture factory and three of the largest oil mills in the U. States, consuming abt. 500,000 sacks of cotton seed annually and producing nearly \$1,000,000 worth of cotton-seed oil, oil cake, and reginned cotton. The number of vessels belonging to the port in 1880 was 63 with an aggregate tonnage of 11,266. There are 6 banks with an aggregate capital of \$1,478,000; 67 public schools, including a male and a female high school, and 32 private schools and academies; 3 daily, 10 wkly, and 2 monthly papers. The Memphis library association has 9,000 volumes. The city is divided into ten wards, and is governed by a mayor, with a board of aldermen of one member and a common council of two members from each ward. It has an efficient police force and a good fire department. Memphis was laid out in 1820, and incorporated as a city in 1831. Owing to the ravages made by several visitations of yellow fever and other infectious diseases, Memphis found itself in 1879, almost upon the brink of ruin as a community. The pop. was frightfully reduced, taxes had grown and increased, and finding it utterly impossible to meet its liabilities, the city failed. A thorough system of sanitary reform has since been energetically pushed forward, until Memphis, once stigmatized as "the hot bed of pestilence and death," has risen to be one of the healthiest cities in the U. States. Pop. in 1870. 40,226; in 1880 33,593 (of whom 14,896 colored, and 2,971 for.).

Miami River, *O.*, rises in Hardin co., flows S. and S.W. for a distance estimated at 150 m. passing Troy, Dayton, and Hamilton, and falls into Ohio R. at the S.W. corner of the State, 20 m. W. of Cincinnati. It passes through a picturesque and fertile country, is rapid, and admits of navigation for only a portion of its length. Its principal branches are the W. branch and the Mad and Whitewater Rs. The Miami canal runs along the river for abt. 70 m. and together they furnish extensive power for manufacturing.—This river is sometimes called the Great Miami, in distinction from the Little Miami, which rises in Clark co. and after flowing S.W. 100 m. nearly parallel with the former, falls into the Ohio 6 m. E. of Cincinnati.

Miamis, an Indian tribe of the Algonquin family, who once occupied a large part of the W. and N. W. of Ohio and a part of Indiana. In 1818 they left Ohio, and in 1846 the greater part left Indiana, where a few still remain: 500 people of this tribe were removed in that year to what is now Linn and Miami counties in Kansas, where they have a reservation of 10,240 acres. They now number but 95, having been mostly destroyed by vice and intemperance. A few others have become citizens. Many have gone to the Indian Territory and joined themselves to the Peorias and Quapaws. The Indiana Miamis are good and peaceable citizens, numbering abt. 350. There are a very few in Michigan.

Michigan (*mîsh'ee-n*), a N. central State, bounded N. by Lake Superior, E. by Lake Superior, St. Mary's R., Lake Huron, St. Clair R. and Lake, the Detroit R., and Lake Erie, S. by Ohio and Indiana and W. by Lake Michigan and Wisconsin. It is situated between lat. 41° 45' and 48° 20' N., and lon. 82° 25' and 90° 34' W. The State comprises two peninsulas entirely separated from each other. The upper peninsula is 318 m. in length from E. to W. and from 30 to 160 m. wide; the lower peninsula has a length of 280 m. and a breadth of 250 m. The area of Mich. is 58,915 sq. m. The E. shore of Lake Erie is low and swampy, thickly wooded and drained by several small and sluggish streams. Further inland the country is rolling and picturesque, with hills from 100 to 200 feet high. Along the water-shed between the lakes there is an elevation of 600 or 700 feet. Bordering Lake Superior is a rough primary formation, with rugged hills and deep valleys. The "Pictured Rocks" are sandstone bluffs from 200 to 300 feet high, which have been worn by the waves into curiously fantastic forms. The highest elevations of the northern peninsula are from 1,500 to 2,000 feet above the level of the sea. Four great lakes wash the shores of this State, which together constitute one half the fresh water on the globe. In the northern peninsula there are many small lakes covering from one to a thousand acres. There are, it is said, 100 streams which empty into the lakes, but most of them are of small size. Grand R., is 270 m. long, 50 rods wide and navigable for steamboats to Grand Rapids, 40 m. The St. Joseph is 30 rods wide for 120 m. from its mouth. Other streams which empty into Lake Michigan are the Kalamazoo, Muskegon, Manistee and Grand Travers. The Saginaw (navigable for 40 m.), Au Sable and Sheboygan empty into Lake Huron. Menomonee R. forms a part of the W. boundary of Mich. The Detroit and St. Clair form the outlet of the great lakes and are navigable for the largest vessels.—For the purposes of description the Lower peninsula of Mich. may be divided by E. and W. parallel lines into three grand divisions, to be known as the Southern, Middle and Northern. The S. division, embracing four tiers of eos., comprises the oldest and most developed section of the State, and its rural portions are devoted entirely to agriculture. The Middle division embraces the next three tiers of eos., and comprises what is generally known as the principal pine lumber region of the State. Where the native forests have been cleared away the coun-

try is rapidly developing agricultural resources, while lumbering enterprises are advancing northward. The N. division is the newest and least settled portion of the peninsula, being, in a great part, unimproved. The Upper peninsula may, in like manner, be separated into three divisions by a line drawn due southward from Marquette Bay to Green Bay, and by a line drawn from the head of L'Anse Bay to the head of Montreal R., where it becomes the W. boundary of the State. The E. division is principally agricultural and is mostly in a state of nature. The Middle division is conspicuous for its resources of iron which yield already enormous products. The W. division includes what is known as the Mineral Range, and is famous for its copper mines besides possessing valuable agricultural lands.—The climate of the S. parts of the State is considerably milder than that of the N., proportionate to their respective difference in latitude and for other reasons which have a bearing on the climate character of countries. In the S. parts, not only all kinds of cereals are raised in abundance and superior quality, but also apples, pears, cherries, plums, and the more delicate peach trees and grapes are cultivated with decided success. The climate in the N. parts of Mich. is nowhere so severe as to prevent the cultivation of winter wheat and the principal ordinary farm and garden products. There is a difference of abt. two or three weeks in the setting in of the spring, and the same time earlier the hibernal weather sets in in the fall in the most northern parts of the State, compared with the most southern districts, but the growing seasons in the north parts of the State is sufficiently long to bring all the ordinary farming crops to maturity, excepting Indian corn, and even this in some seasons ripens there before the frosts appear. Potatoes planted in the N. districts not only yield prolific harvests, but are generally considered as of superior quality to the tubers raised in the S. part of the State; turnips, carrots, radishes, and cabbage attain in the virgin soil of these N. frontier lands a really astonishing size, rarely observable in the best manured gardens in the S. The mean temperature of Lansing, as determined by 18 years of continuous meteorological observations taken at the State agricultural college, is 46° 71'.—The northern peninsula with some exceptions is rugged and has a poor soil. It is however, well timbered with white pine, spruce, hemlock, birch, oak, aspen, maple, ash, and elm. Much of the southern is occupied by oak openings and prairie, with a large portion of forest, in which walnut, sugar maple, oak, hickory, ash, basswood, elm, linden, locust, dogwood, beech, sycamore, cherry, pine, hemlock, spruce, tamarack, yypress, cedar, and chestnut are the prevailing growths. White pine forms the chief wealth of the N. half of this peninsula.—Notwithstanding the enormous wealth of Mich. in other resources, it is in agriculture in which at least half of its active pop. is employed, that it develops its greatest eminence. Its principal products in 1880, according to the U. States census of that year, were 1,204,316 bush. of barley, 413,062 of buckwheat, 32,461,452 of corn, 18,190,793 of oats, 294,918 of rye, 10,897,600 of potatoes, 800,712 tons of hay, and 35,532,543 bush. of wheat (for which last product Mich. ranked 4th among the States, Illinois, Indiana, and Ohio leading. Other staples are produced, for which the last official accessible returns are as follows: Hops, 828,269 lbs.; honey, 280,321 lbs.; butter, 4,101,912 lbs.; maple sugar, 4,319,793 lbs. The number of farms in 1880 was 119,769, containing 11,077,166 acres, of which 6,374,385 were improved. The average size of farms was abt. 92 acres. Number of farm animals was 354,005 horses, 4,576 mules, 416,900 milch cows, 764,166 oxen and other cattle, 1,930,656 sheep, and 506,437 swine. At the census of 1880 Mich. ranked 4th among the States (Ohio, California and Texas each leading) in the production of wool. In

the census year, 1,964,952 sheep were sheared, producing 10,724,107 lbs. of wool, or 5.45 lbs. per clip. —Noted for its wheat, its wool and its fruit, Mich. is also the first of the U. States in its production of lumber, salt, charcoal, pig iron, and copper, and in the extent of its fresh water fisheries, first in the value and probably first in the amount of its yield of iron ore, and among the most advanced in its general manufacturing and commercial development. While a few States excel it in the volume of their crops, and some in the aggregate of their industrial statistics, none can equal it in the magnitude and diversity of its resources, taken together. For more than a score of years lumbering has been the chief manuf. interest of Mich., and no State equals it at the present time in the extent and value of its lumber products. The product of 1881 is estimated at 3,919,500,000. The large total is that of saved lumber pine alone and is exclusive of shingles, laths, staves, and long timber, whose product possesses an annual value of many millions. The Saginaw valley is the seat of immense salt manuf. from inexhaustible under-running brine which is procured by boring deep wells and pumping. Mich. product of salt exceeds that of any other State, the value of product for the census year 1880 being at \$2,271,913, while New York comes second with \$1,106,740. The copper mines of Lake Superior are said to be the richest in the world, with the exception of those in Chili. They form 4 districts: the Ontonagon, located at the base of Keweenaw Point, and yielding now but small returns; the Keweenaw, covering the N. extremity of the Point, and containing rich fissure veins; the Portage lake, which includes the famous calumet conglomerates, belonging to the Calumet and Hecla Company which employs over 2,000 men and supports two flourishing villages; and Isle Royal, a narrow rocky island near the N. shore of the lake. The yield of 19 mines in 1880 was 938,960 tons of ore valued at \$7,979,232, which was 90.48 per cent. of the entire product of the U. States. The iron districts of Mich. are chiefly in Marquette and Menominee cos. The ores are of extraordinary richness, 62.9-10 per cent. of metal being given by the State Geologist as the average per centage of first class ores, while fortunes have been made in Pennsylvania in mining 40 per cent. ore. The greater part of the ore mined in the upper peninsula is shipped in its natural condition and reduced into iron by the coke and anthracite furnaces of other States. The furnaces of Mich. use charcoal and produce a superior quality of pig iron. In 1880, the yield of 43 mines was 1,834,712 tons of ore, valued at \$6,034,648. There are great plaster mills at Grand Rapids, and the grindstones of the Huron co. quarries have no superior in the northwest. Mich. especially excels in its manuf. of railroad cars of all grades, agricultural implements, furniture, stoves, wooden ware, paper and paper pulp, wagons and carriages, matches and cut tobacco. The annual prod. of its flouring-mills, planing-mills, sash and door factories, foundries, machine shops, cigar factories, tanneries, breweries, bakeries, boot and shoe factories, and clothing establishments, must in each case be estimated by millions. According to the census of 1880, Mich. had 8,873 manuf. establishments, employing 77,591 hands; capital invested, \$92,930,959; wages paid during the year, \$24,313,683; value of material, \$92,900,369; value of products, \$150,715,025. —Mich. has the most productive fresh water fisheries in the Union. In 1880 there were 1,781 men and 490 vessels of 108,845 tons employed in lake fishing, and the catch amounted to 24,013,000 lbs. (chiefly whitefish) valued at \$711,675. —The State is divided into 4 customs districts, viz.: Detroit, Huron (port of entry, Port Huron), Michigan (port of entry, Grand Haven), and Superior (port of entry, Marquette). The foreign commerce in 1882 is carried on wholly

with Canada. The value of exports was \$11,982,419; of imports, \$7,527,854. The vessels belonging or registered in the State consisted of 498 sailing vessels of 81,865 tons; 486 steamers of 92,522 tons, and 105 barges of 28,071 tons. The vessels built during the year were 39 sailing vessels of 11,338 tons, 58 steamers of 16,996 tons, and one barge of 445 tons. The number of miles of railroad in the State in 1882 was 4,284. — A compulsory school law is in force, which compels parents and guardians to send all children between the ages of 8 and 14 years to school for at least 12 weeks in the year. In 1881 there were 6,573 schools, 14,469 teachers and 371,613 scholars, who attended school in average 150 days. The total expenditure for the year was \$3,417,508; value of school property \$9,383,951. In all the larger cities and towns there are superior graded schools, and there is a State normal school at Ypsilanti. All the older portions of the State are well supplied with schools, for which there is adequate taxation, and have teachers fully competent for their work. In the more sparsely settled parts of the State there is a want of better buildings and a greater degree of competence on the part of teachers. The University of Mich. at Ann Arbor is a State institution, in a flourishing condition, the acknowledged peer of the foremost in the land. The State agricultural college at Lansing, founded in 1855 and opened in 1857, is the pioneer agricultural college in the U. States. In addition to these there are the following: Wesleyan Methodist college at Adrian, in a healthy condition; a Methodist Episcopal college at the beautiful village of Albion, in which there are 113 male and 100 female students; a Seventh Day Baptist college at Battle Creek, in which there are nearly 300 students; a Congregational college at Grand Traverse, a Free Baptist college at Hillsdale, a Dutch Reformed college at Holland, and a Baptist college at Kalamazoo. Olivet college, at the beautiful little village of Olivet, in Eaton co., was chartered in 1848, is under the general care of the Congregationalists and Presbyterians, and has nearly 200 pupils, about equally divided between the sexes. The Michigan female seminary at Kalamazoo was incorporated in 1856, is under the control of the Presbyterian synod of Michigan, and is modeled after the Mt. Holyoke seminary. The Michigan military academy, located on the border of a charming lake, a few miles from Pontiac, was organized in 1877. Its course is three years. A part of its instruction is military, for which a West Point officer is detailed by the war department. Two penal institutions are owned by the State; the State prison at Jackson, and the house of correction and reformatory at Ionia, the former having in 1882, 692 inmates and the latter 586. The reform school at Lansing, opened in 1853, had 325 inmates in 1882. There are 2 asylums for the insane at Kalamazoo and at Pontiac. —Mich. is divided into 79 cos., viz.: Alcona, Allegan, Alpena, Antrim, Baraga, Barry, Bay, Benzie, Berrien, Branch, Calhoun, Cass, Charlevoix, Cheboygan, Chippewa, Clare, Clinton, Crawford, Delta, Eaton, Emmet, Genesee, Gladwin, Grand Traverse, Gratiot, Hillsdale, Houghton, Huron, Ingham, Ionia, Iosco, Isabella, Isle Royale, Jackson, Kalamazoo, Kalkaska, Kent, Keweenaw, Lake, Lapeer, Leelanaw, Lenawee, Livingston, Mackinac, Macomb, Maumette, Manistowick, Marquette, Mason, Mecosta, Menominee, Midland, Missaukee, Monroe, Montcalm, Montmorency, Muskegon, Newaygo, Oakland, Oceana, Ogemaw, Ontonagon, Osceola, Oscoda, Otsego, Ottawa, Presque Isle, Roscommon, Saginaw, St. Clair, St. Joseph, Sanilac, Schoolcraft, Shiawassee, Tuscola, Van Buren, Washtenaw, Wayne, Wexford, Lansing is the cap., and Detroit the commercial metropolis of the State. The constitution adopted in 1850, as several times amended, continues in force. The legislature consists of 32 senators and 100 representatives, who,

together with the governor and other executive officers, are elected for a term of two years. The supreme court consists of 4 justices (salary \$4,000 each), elected by the people for 8 years. Treason is the only capital crime; murder is punishable with solitary imprisonment for life. The State sends 11 representatives to congress, and has 13 electoral votes. The State bonded debt in 1882 was \$904,149, but sufficient funds were held in the treasury and applicable for that purpose, to extinguish it. The receipts into the treasury for the year 1881 aggregated \$2,607,288.07; expenditures, \$2,392,569.01. The val. of taxable prop. in 1881 was \$810,000,000.—A mission was established at Sault Ste. Marie, by Father Marquette, in 1668; this was the first European settlement. The French remained in possession until 1763, when the territory was ceded to Great Britain. A bloody war was waged by the Indians under the leadership of Pontiac. The Territory of Mich. was organized Jan. 16, 1805. The upper peninsula became a part of Mich. in 1836, and the State was admitted into the Union Jan. 26, 1837. The name Mich. is abbreviated from two Chippewa words meaning Great Lake. Pop. in 1810, 4,762; in 1830, 31,639; in 1850, 397,654; in 1860, 749,113; in 1870, 1,184,059; in 1880, 1,636,937 (of whom 862 males and 772,582 females; 1,348,429 natives and 388,508 of foreign birth; 1,614,560 whites, 15,000 colored, 28 Chinese and 7,249 Indians).

Michigan Lake, one of the five great lakes, the second in area, and the only one entirely within the limits of U.S. Area, 25,600 sq. m. Its greatest length is 340 m.; average depth, 990 ft.; height of surface above the ocean, 578 ft.—the same as that of Lake Huron. Its shores are generally low and often sandy. It has comparatively few bays or very good harbors. The principal bays are Green Bay in Wisconsin and Grand Traverse Bay in Michigan. It receives many streams the mouths of which in some instances (as at Chicago, Ill.) have by artificial means been converted into capacious harbors. Most of the islands of this lake are in the N. part. Lake Michigan is subject to violent storms, but it is an important area of commerce, being traversed by many steamboats, three-masted schooners, and other craft. It has the State of Michigan on the E. and N., Wisconsin and Illinois on the W., while its S. extremity reaches Illinois and Indiana. It has extensive fisheries, the white fish and several large trout being the most important species caught.

The chief prod. in 1880 were 212,719 bush. of barley, 232,094 of corn, 497,409 of oats, 80,683 of rye, and 190,294 of wheat. Potatoes and butter are also staple prod. Cap., Milwaukee. Val. of taxable prop. abt. \$125,000,000. Pop. 138,323 (of whom 55,054 for., and 319 colored).

—The chief city and port of entry of the State, cap. of above co., on the W. shore of Lake Michigan, 75 m. E. of Madison, and 85 m. N. by W. from Chicago. The lake opposite the city makes an indentation on the shore, forming a bay 6 m. wide and 3 m. deep, which is easy of access at all seasons. It is regarded as the best harbor on the S. or W. shore of the lake. The climate is peculiarly bracing and healthful, and the atmosphere is remarkably clear and pure. The city is regularly laid out. The centre, near the Milwaukee and Menominee Rs. is the business quarter; and the E. and W. parts, the former of which is built upon a high bluff overlooking the lake, while the latter is still more elevated, are occupied by residences. The material used in building is largely the beautiful cream-colored Milwaukee brick. The streets, except those in the commercial quarter, are generally well shaded. There are three lines of horse cars. The principal public buildings are the new county courthouse, the U. States custom house and post office building, the academy of music, the opera-house, &c. The chamber of commerce building, finished in 1880, is a magnificent structure of solid cut Ohio stone and polished Scotch granite. In 1880 also was completed one of the finest exhibiting buildings in America, built at a cost of \$300,000, and the initial exhibits therein, showing the unlimited resources and products of the great N.W. was a splendid success. Milwaukee has railroad communications with all parts of the country by means of the C., M. & St. P., the C. & N. W., the M., L. S. & W., the W. C., and Western lines. The receipts and shipments by those lines are of great extent and value; wheat and flour are the most important items. There are 6 elevators for grain, with a combined capacity of 3,450,000 bush. In 1882 there were belonging to the ports 277 sailing vessels of 58,520 tons, and 83 steamers of 16,736 tons. In 1881 the entrances in the coastwise trade were 3,917 steamers, of 3,109,445 tons, and 4,541 sailing vessels of 640,247; clearances 4,039 steamers of 3,110,506 tons, and 4,567 sailing vessels of 645,035 tons. The manuf. are extensive, and embrace lager beer (which is highly esteemed and widely exported), pig iron, iron castings, flour, cement, glass, leather, malt, machinery, agricultural implements, high wines, tobacco and cigars, furniture, brooms, paper, woolens, wagons, soap and candles, doors and windows, boots and shoes, steam boilers, car wheels, baskets, trunks, and white lead. The following table shows a portion of the business of the city for 1881, from which some idea can be obtained of the total annual transactions of Milwaukee in all her manifold branches:

 In 1882 there were 3 nat. and 9 other banks. The clearings of these banks for 1881 aggregate \$360,884,426, an increase over the clearings of 1880 of nearly \$45,000,000. Milwaukee has several insurance companies; 9 daily, 19 wkly, and quite a number of semi-monthly and monthly publications. The city is divided into 13 wards, and is supplied with water from the lake by a good system of water-works. It has a bonded debt of \$2,240,000, and was in 1881, assessed at \$58,000,000, on which the tax was \$1,220,113. The N.W. national asylum for disabled soldiers is abt. 3 m. from the city. In the city there are 3 orphan asylums, a home for the friendless, and 2 hospitals. Milwaukee has 72 churches, of which 58 are Protestant, 12 Catholic, and 2 Hebrews. Here also is the large Catholic "Convent Notre Dame." There were in 1880, 25 public graded schools, including a high school, and 48 private schools, including the Milwaukee Female College. The library of the young men's association contains 11,000 volumes. Milwaukee was settled in 1835, and incorporated as a city in 1846. Pop. in 1840, 1,712; in 1850, 20,061; in 1860, 45,246; in 1870, 71,440; in 1880, 115,578; in 1882 (local estimate) 140,000.

Minneapolis, Minn., city †, cap. of Hennepin co., on both sides of the Mississippi R., at the Falls of St. Anthony, 8 m. N.W. St. Paul. It is regularly laid out, with straight avenues 80 ft. wide, and double rows of trees each side, well watered and lighted, has several creditable public edifices and many elegant private residences. The site is upon a broad esplanade which commands a fine view of the falls, and the surrounding country is noted for its beauty. Several picturesque lakes are in the immediate vicinity, and the celebrated Falls of Minnehaha are but 3 m. distant. Minneapolis is connected by railroad with St. Paul and Duluth, and has a line of steamers which in summer ply on the upper Mississippi, above the falls, to St. Cloud. The University of Minnesota is located here, as well as the Augsburg (Lutheran) Theological Seminary, and Hamline University (Methodist). There are 52 churches, 3 daily, 15 wkly, and 6 monthly papers, an academy, a female seminary, and a business college, an atheneum, academy of music and opera-house, a spacious and beautiful cemetery, extensive railroad repair shops, 2 nat. and 8 other banks, and several very extensive commercial establishments. Minneapolis has become the most important milling centre of the N.W. Power of immense capacity is furnished by the Mississippi R., which is here nearly 1,000 ft. wide, has a fall of 75 ft. within the space of a mile, and has been utilized to the supply of 28 flouring mills and several saw mills. The mills have a capacity which demands 20 million bush. of wheat in a year, a quantity representing an area of 1,250,000 acres of land in cultivation. The grain is purchased by agents representing an association of the millers, who canvass the tributary wheat-growing districts for 3 months after the harvest of each year, to secure the bulk of the year's supplies, and forestall the competition of Eastern speculators. The wheat is distributed among the several mills in proportion to their capacity for grinding. While waiting to be ground it is stored in the mills, which can take care of abt. 2,500,000 bush.; in the elevators of the city, which can hold abt. half that amount; and at outlying stations on the various lines of railroad. The total productive capacity of all the mills is computed at 28,000 barrels of flour a day. Besides the extensive system of flouring mills, 17 lumber mills are in operation, producing abt. 2,500,000 superficial ft. of lumber during the season. Minneapolis was first settled in 1849, and was incorporated in 1867. In 1872, the city of St. Anthony was consolidated with it. Pop. in 1860 (within its present limits) 5,822; in 1870, 18,079; in 1880, 46,887; in 1882 (local estimate) 60,000.

Minnesota, a river of Minnesota, having its source in a series of lakes on the Dakota border, between lat. 45° and 46° N., and pursuing a S.E. course for about 320 m. to its confluence with the Blue Earth; then turning N.E. it flows in that direction for about 120 m., falling into the Mississippi at Mendota. Its course is principally in the valley lying between the Coteau du Grand Bois and the Coteau des Prairies. For its whole distance from Big Stone Lake it has a fall of only 220 ft. It is navigable for steamers about 40 m. to a point where at low water a ledge of rocks obstruct further progress; but ordinarily small boats can ascend to Patterson's Rapids, 295 m. from its mouth.

—a N.W. State, bounded N. by British America, E. by Lake Superior and Wisconsin, S. by Iowa and W. by Dakota. It is situated between lat. 43° 30' and 49° N., and lon. 89° 39' and 97° 5' W. The extreme length N. and S. is 380 m. and the extreme breadth E. and W. 387 m.; area, 83,365 (of which 4,160 sq. m. is water surface). The general elevation of the State is 1,000 ft. above sea level. In the N. part are the "Heights of Land," constituting a water-shed between three great river systems—viz., those of the Mississippi Valley, Hudson's Bay and the St. Lawrence. The most elevated lands reach a height of nearly 1,600 ft. about Lake Itasca. Other elevations are: Near Lake Shetek, 1,578 ft.; Lake Pemidji, 1,456 ft.; Leech Lake, 1,330 ft. The N.E. section has been characterized as "the region of swamps and bogs." Westward of the Mississippi the open rolling prairie begins. A gentle descent of 400 ft. leads to the valley of the Red River of the North. This valley, or plain, is from 30 to 35 m. wide, and "a more complete dead level cannot be found in the whole country." The St. P. & P. RR. crosses it for 40 m. "without a curve, a fill or a cut, save what is necessary to remove the sod." Nearly one-third of the whole area of the State in the N.E. is almost entirely covered with coniferous forests. The pine region includes 21,000 sq. m. The swamps have a growth of tamarac of little value for timber. Deciduous trees predominate W. of the Mississippi; the oak, elm and ash are most frequent, but every species of tree known to the Upper Mississippi Valley is found here, with the possible exception of the beech and sycamore. An immense forest, known as the Bois Franc by the early French settlers, and now as the "Big Woods," extends over the centre of the State; it is 100 m. long, 40 m. wide and covers an area of 4,000 sq. m., which is larger than the combined areas of Rhode Island and Delaware. Minn. has a coast-line of 120 m. on Lake Superior. Along the N. boundary are the Lake of the Woods, Rainy, Mountain and Arrow Lakes. Other lakes are the Red, Vermilion, Leech, Winibigoshish, Swan and Mille Lacs. These bodies of water are from 1 to 30 m. in diameter, and some of them cover an area of 400 sq. m. Many of them have no visible outlet. There are said to be 10,000 lakes in the State, most of which abound in fish and are surrounded by a heavy growth of timber. The Missis-

issippi R. rises in Lake Itasca and flows through and by the State for 800 m. (for 540 m. of which it is navigable), constituting the E. boundary for 135 m. At the Falls of St. Anthony it is 350 yards wide and has a descent of 58 ft. One of its affluents, the St. Croix, navigable for abt. 55 m., constitutes the E. boundary for 129 m. The Minnesota traverses the lower part of the State in a S.E. and N.E. direction, and after a course through the State of 450 m., falls into the Mississippi at Fort Snelling, 5 m. above St. Paul; it is navigable abt. 300 m. The Red R. of the North rises in Elbow Lake, flows through several lakes, running in a S.W. direction, and then turning N. forms the W. boundary for 379 m.; it is navigable abt. 250 m. In the N.E. part is the St. Louis R., which falls into Lake Superior, and is important as the first link in the chain of lakes and rivers of the St. Lawrence system; and in the S.W. are the head waters of the Des Moines, abt. 135 m. long, of which abt. 20 are navigable. These with their tributaries and a host of lesser streams, penetrates every portion of the State. Some of the water powers furnished by these streams are among the finest in America, and will contribute to the future manufacturing importance of the State. —The elevation of Minn. above the sea, its fine drainage, and the dryness of the atmosphere, gives it a climate of unusual salubrity and pleasantness. It has an annual mean temperature of 44° 6', while its mean summer temperature is 70° 6', the same as that of middle Illinois. Its high latitude gives it correspondingly longer days in summer than States farther S., and during the growing season there are 2½ hours more sunshine than in the latitude of Cincinnati. This, taken in connection with the abundant rainfall of early summer, accounts for the rapid and vigorous growth of crops in Minn., and their early maturity. The winter climate is one of the attractive features of the State. Its uniformity, freedom from thaws and excessive spells of cold and severe weather, make out-door life and labor a pleasure. These features tend to make the climate the healthiest in the Union, and it is the resort for thousands of invalids from eastern States. Actual statistics taken in 1881, show that the average mortality was 1 in 84, or about 1.25 per cent.; whereas the births run in the ratio of 3 to 1 of the deaths. —The agricultural development of Minn. evinces the richness of its soil, and its favorable climate. The statistics of 1881 show that in that year there were 81,089 farms, and a cultivated area of 4,729,536 acres. Wheat is the prominent cereal cultivated, and embraces 66.59 per cent. of crops produced in 1880. The average yield of wheat per acre for 12 years, was 14.5 bush., showing Minn. to be almost unexcelled in the product of this great staple. The aggregate yield in 1880 was 39,399,068 bush. The other principal products exhibited by the census of 1880 were 39,399,068 bush. of corn, 2,972,965 of barley, 41,750 of buckwheat, 23,382,158 of oats, 215,245 of rye, 4,888,040 of potatoes, and 1,577,702 tons of hay. The statistics of live stock in 1881 gives the number of horses as 226,061; cattle (of all kinds), 584,573 (of which milch cows comprise 228,955); sheep, 267,315; hogs, 238,987. The wool clip in 1881 was 923,170 lbs. Dairy products are rapidly increasing. In 1880 there were 15,693,283 lbs. of butter, and 419,994 lbs. of cheese made. Creameries and cheese factories are springing up in every neighborhood. Fruit raising has not, as yet, become general. In 1880, only 275,000 apple trees in bearing were reported. —Although the leading industries of the State are agriculture and lumbering, the manufacturing branch is rapidly becoming large. The main branches now carried on are the products of lumber in various shapes, flouring, agricultural machinery, brewing, furniture, boots and shoes, clothing, wagon making, etc., although new branches of industry are being opened every day. The lumber and flour manufacturing are the principal industries, and

enlist more capital than all the other lines. In 1880 there were 540,997,000 ft. of white pine scaled (including 187,836,000 shingles and 88,088,000 laths). In the belt of hard wood extending W. and S. of the pine region, the cut for the census year 1880 (exclusive of 7,825,000 staves and 547,000 sets headings) was 36,884,000 ft. During 1881, 3,142,974 lbs. of flour were ground at Minneapolis.—Navigable waters to the extent of 1,500 m. afford good facilities for trade. The State comprises the U. States customs district of Duluth, and that of Minnesota (port of entry, Pembina on the Red R.). The imports at Duluth in 1882 amounted to \$50,980, and the exports to \$591,492. In Minnesota district the imports were \$954,162; exports, \$3,721,972. The chief articles of export were oats, flour, and lumber. The building of railroads has been very brisk for several years past. In 1862, the State had only 10 m. of railroad; in 1882 there were 3,780 m. in operation.—There are extensive and valuable mineral deposits in Minn., which only await capital and development to add to the wealth and manufacturing industries of the State. On the N. shore of Lake Superior, extensive masses of copper exist. Iron ore of a valuable quality and in large quantity is found around Portage and Knife Rs. Recently the existence of a large bed of magnetic iron ore has been discovered in and near St. Paul. Gold quartz is found at Vermillion Lake. Plumbago also exists on the N. shore. Building material, granite, brown stone, limestone, sand stone, brick, clay and potters' clay are also abundant.—In no State is more liberal provision made for education than in Minn. By its organic act, two sections of land in each township are set apart for this purpose, and the State constitution provides that the proceeds of this land shall remain a perpetual school fund for the State, the income of which shall be used to pay for the schooling of its children. This fund (Jan. 1, 1881), was \$4,830,862, and the interest on it for 1881 was divided amongst 177,278 scholars. There were 4,101 school houses in the State, valued at \$3,156,210. The normal schools of the State are 3 in number, situated at Winona, Mankato and St. Cloud. The university of Minn. at Minneapolis is the crowning institution of the public and free system of education in the State, it has a collegiate or elementary department, and beyond this department of agriculture, science, literature and the arts, and the mechanic arts, and is to have also schools of law and medicine. The most prominent among the private institutions of learning are: Carleton college, at Northfield, Groveland seminary, at Wasioja; Afton academy, at Afton; St. Mary's female academy and St. Paul female seminary, at St. Paul. The public institutions are the State prison at Stillwater, a reform school for boys and girls at St. Paul, a hospital for the insane at St. Peters, an asylum for the deaf, dumb and blind at Faribault, and a soldiers' orphans' home at Winona.—The State is divided into 79 cos., viz.: Aitkin, Anoka, Becker, Beltrami, Benton, Big Stone, Blue Earth, Brown, Carlton, Carver, Cass, Chippewa, Chisago, Clay, Cook, Cottonwood, Crow Wing, Dakota, Dodge, Douglas, Faribault, Fillmore, Freeborn, Goodhue, Grant, Hennepin, Houston, Isanti, Itasca, Jackson, Kanabe, Kandiyohi, Kittson, Lac-qui-parle, Lake, Le Sueur, Lincoln, Lyon, McLeod, Marshall, Martin, Meeker, Miller, Lacs, Morrison, Mower, Murray, Nicollet, Nobles, Norman, Olmsted, Otter Tail, Pine, Pipe Stone, Polk, Pope, Ramsey, Redwood, Renville, Rice, Roek, St. Louis, Scott, Sherburne, Sibley, Stearns, Steele, Stevens, Swift, Todd, Traverse, Wabasha, Wadena, Waseca, Washington, Watonwan, Wilkin, Winona, Wright, Yellow Medicine. The cities are: Duluth, Hastings, Mankato, Minneapolis, Owatonna, Red Wing, Rochester, St. Cloud, St. Paul (the cap.), and Winona.—Minn. is governed under the constitution adopted Oct. 13, 1857. The legislature consists of a senate

of 41 members, elected for 2 years, and a house of representatives elected for one year. The governor and other executive officers are elected for 2 years. The judiciary comprises a supreme court, nine district courts, and a probate court in each co., besides justices of the peace, who have jurisdiction where the amount in dispute does not exceed \$100, and where the title to real estate is not involved. The supreme court consists of 3 judges, elected for 7 years. The State sends 5 representatives to congress and has 7 electoral votes. The bonded State debt in 1883 was \$4,339,000. The valuation of property was: real estate, \$242,938,170, personal property, \$79,219,445; total, \$322,157,615. The revenue of the State in 1881 was \$1,715,406.—Minn., which in the Sioux language signifies "smoky water," was the name given to the principal river. Father Hennepin visited the Falls of St. Anthony's in 1680. On the 8th of May, 1689, possession was taken of the country in the name of France. The authority of the U. States was extended over it in 1812. Minn. Territory was organized March 3, 1849, and on May 11th, 1858, it was admitted into the Union as the 32d State. Pop. in 1850, 6,077; in 1860, 172,023; in 1870, 439,706; in 1880, 780,773 (of whom 419,149 males and 361,624 females; 513,097 natives and 267,676 of foreign birth, 776,884 whites, 1,564 colored, 25 Chinese, and 2,300 Indians).

Mississinewa River, O., rises in Darke co., flows W. and then N.W. for abt. 125 m. and empties into Wabash R. in Miami co.

Mississippi (Indian Mische Sepe, the Great River), the largest river of North America, and in length of navigable tributaries, and in extent of facilities afforded to commerce, the greatest river in the world. It rises in Minnesota, on the dividing ridge between the waters which flow into Hudson's Bay and those flowing into the Gulf of Mexico, and so near the source of the Red River of the North that in times of fresher their waters have been known to commingle. It is, at its source, 3,160 m. from its mouth, a rivulet flowing from a small pool fed by springs. Thence it flows through a number of pools or ponds, each larger than the preceding one, until it expands into Itasca Lake, whence it emerges as a stream of some size, and soon becomes a river. It first flows N. through Cass, Sandy, and other lakes, and then, turning toward the S., rolls downward to the Gulf of Mexico, passing over more than 18 degrees of latitude. Between the source and the Falls of St. Anthony are many rapids and waterfalls, but the only one of any magnitude is the Pegasus Rapids, 685 m. above St. Anthony. From these rapids down to the St. Anthony Falls, the river is navigable, and much of the scenery is very beautiful. The Falls of St. Anthony form an insuperable barrier to navigation, and here the St. Louis steamers stop. From St. Paul to Dubuque the river flows between abrupt and lofty bluffs, distant from each other from 2 to 6 m. and rising from 100 to 600 ft., the valley or bottom being very beautiful, filled with islands, and intersected in every direction by tributaries of the Mississippi, and by the various channels and "sloughs" of the river itself. The bluffs are principally of limestone; they are almost uniformly vertical and rugged, and nearly destitute of vegetation, except at the base and summit. There are grandeur and sublimity in every mile of this portion of the river; but it becomes monotonous after a time. Below Dubuque, the valley continues to preserve the same general characteristics, but the bluffs are lower and more like hills, and the scenery, though still beautiful, is tamer. Below Alton it begins to assume more the appearance of the "Lower River" (as the portion below St. Louis is called); and the waters, turbid and muddy, roll on a mighty torrent between banks often low, flat, and sandy, and the vegetation continually more and more tropical in its nature. The lower part of the river is so much flooded after the rainy season that there is often a space of inundated woodland from 30 to 100 m. in width; large swamps and bayous, also, are found during the whole year, on both sides the river; and, indeed, the whole country, nearly as far up as Natchez, 427 m. from its mouth, presents nothing but a swampy wilderness, the habitat of alligators, and subject to epi-

demie and other diseases most inimical to human life. The lower part of the Mississippi, for 30 m. above its delta, as far as the head called Plaquemines, is a reedy marsh, without trees and containing only a few fishermen's huts, and a residence for pilots at Balize; in fact, nothing can well be conceived more dreary than the aspect of the river, even as far as 70 m. above the mouth. The term "pass" is applied to all the outlets of the Mississippi from the point when the river divides into numerous channels or outlets to their termination in the Gulf. All these passes are seriously obstructed by bars of blue clay mud, over which the depth of water is sometimes very shallow. By act of congress approved March 3, 1875, a contract for the construction of jetty-work at the mouth of South Pass, in order to secure and maintain a navigable channel from the pass into the Gulf of Mexico. The work progressed so successfully that at the beginning of 1880 there was in South Pass a wide and ample channel of 23½ ft., and for the greater length of the channel between the jetties, over or through the bar, a channel of 28 to 35 ft. in depth. The Mississippi recipient of all the waters flowing E. from the Rocky Mts., and W. from the Alleghanies, is subject to periodical inundations, the effect of which is greatly heightened by the flatness of the circumjacent country in the lower part of its course. To secure the land from these inundations, immense embankments, or *levées*, as they are generally called, have been formed along the Mississippi, and the canals or bayous through which its waters overflow. The principal of these *levées* commences at the head of the Island of Orleans, and extends down the stream for abt. 130 m. The river, however, not infrequently bursts through this dyke, and submerges the adjoining country. The facilities afforded by the Mississippi and its various tributaries for internal navigation are wholly unequalled, except, perhaps, by the Amazon and its feeders, in S. America. And vast as are its natural capacities for navigation, they have been greatly extended by canals and connection with our wonderful system of railroads. It is also united with the grand chain of lakes and the basin of the St. Lawrence; and goods taken on board at New York may be transported to New Orleans without being unshipped.—a S. W. State bounded N. by Tennessee, E. by Alabama, S. by the Gulf of Mexico and Louisiana and W. by Louisiana and Arkansas. It is situated between lat. 30° 13' and 35° N. and lon. 88° 7' and 91° 41' W. Its extreme length from N. to S. is 331.65 m. and its breadth from E. to W. 210 m.; area, 46,810 sq. m. Along the Gulf of Mexico the country is low and sandy, with frequent cypress swamps and marshes. The central part of the State is hilly or undulating and interspersed with prairies. A belt of level country, covered with forests and designated as the "flat woods," extends from the N. boundary through the E. cos. half the length of the State, and terminates in Kemper co. In the N.E. is a carboniferous formation, elevated some 500 or 600 ft. above the level of the sea. Bluffs extend along the Mississippi R. as far N. as Vicksburg. Above that city the bottom lands stretch to the Tennessee line, with a width of 50 m. As far E. as the Yazoo and Tallahatchie Rs. the ground is low and swampy. Nearly 7,000 sq. m. are liable to inundation. The *levées* were neglected during the war, and large tracts once cultivated have become the prey of the river. The waters remain stagnant in the morasses, lagoons and slashes, which are the retreats of alligators, snakes, lizards and swarms of venenous insects. The Mississippi R. forms the W. boundary of the State for more than 500 m. Its principal affluents are the Yazoo, 290 m. long, navigable as far as the junction of its two branches, the Tallahatchie and Yalabusha; the Big Black, 200 m. long and navigable for 50 m.; the

Bayou Pierre and Homochitto. The Tennessee R. forms the N.E. boundary for 20 m. The Tombigbee rises in this State and is navigable for steamboats to Aberdeen. Pearl R., which forms a part of the boundary between Miss. and La., is 250 m. in length, and small boats navigate it for 100 m. The Pascagoula, which flows into the Gulf of Mexico, has a broad bay at its mouth, in which the depth of water is only four ft. Every part of the State is well watered, and the river system affords more than 2,000 m. of steamboat navigation. The coast line on the Gulf of Mexico is 88 m. in length. None of the harbors are deep enough for the admission of large vessels. A chain of low islands extends beyond Mississippi Sound abt. 10 m. from the main land. In the S.E. are extensive and dense groves of pine, principally of the long-leaved variety. Live-oak and red cedar, for ship-building, are abundant. Except in the Mississippi bottom, where malarial fevers frequently occur in summer, the State is generally healthy. The summers are long and hot, the winters somewhat colder than in the same latitude on the Atlantic coast. The isothermal lines which cross the State are: Spring 65° 70°; Summer, 80°-82°; Autumn, 65°-70°; Winter, 45°-55°; annual means, 60°-70°.—The soil of the Mississippi bottom is very fertile. The region E. of this, characterized by the deposits of yellow loam, is generally fertile, though in places easily exhausted. The N.E. portion, except the prairies, is less productive. The cane hills and the central belt of the State possesses a generally productive soil. The S. region has a generally poor and sandy soil, particularly along the coast. Miss. is almost exclusively an agricultural State. Cotton and Indian corn are the staple crops. Wheat and other grains are grown in the North, and rice and sugar cane in the South. All the fruits of temperate climates grow here in perfection; plums, peaches, and figs are abundant, and in the South the orange. The deer, cougar (commonly called panther), wolf, bear, and wild cat are still common. Paroquets are seen as far N. as Natchez, and wild turkeys and pigeons abound. Oysters and fish are abundant in Mississippi sound.—According to the census of 1880, the number of farms was 75,205 comprising 13,813,000 acres, of which 4,895,000 were in cultivation. The principal products for the census year were 21,340,800 bush. of corn, 1,959,620 of oats, 218,890 of wheat, 955,808 bales of cotton, 526,625 galls. of molasses, and 1,718,951 lbs. of rice. The live stock consisted of 112,309 horses; 129,778 mules; 61,705 working oxen, 268,178 milch cows, 387,452 other cattle, 287,694 sheep, and 1,151,818 swine.—Very little attention has been given to manufactures. The census of 1880 reported 1,479 manufacturing establishments, employing 5,827 hands; cap. invested, \$4,727,600; wages paid during the year \$1,192,645; value of material, \$4,667,183; value of products, \$7,518,302. Among the leading articles were lumber, grist-mill products, and cotton goods \$679,093 the product of 8 cotton mills, working 644 looms and 18,568 spindles.—The foreign trade is carried on largely through New Orleans and Mobile. Cotton and lumber are the chief exports. The coasting and river trade is large. The coasting trade is chiefly directed to Mobile and New Orleans, while the Mississippi R. trade centres in the latter, and that of the Tombigbee in Mobile. The railroads terminating at these two ports and at Memphis are also large carriers of merchandise. There are three customs districts: Natchez, Pearl River (port of entry, Shieldsborough), and Vicksburg. The direct foreign and the coasting trade are centred entirely in the district of Pearl R. The value of foreign commerce for the year 1882 was \$535,534, ft., almost entirely exports, including 22,557 m. ft. of boards, and 1,500,923 cubic ft. of timber. The number of entrances in the foreign trade was 100, of 56,405 tons; clearances, 116 of 59,429

tons. The number of vessels belonging in the State was 192 of 9,720 tons, viz.: Natchez, 5 of 254 tons; Pearl R., 158 of 6,110 tons; Vicksburg, 29 of 3,356. In 1882 there were 1,231 m. of railroad in the State. —Free public schools are required by the constitution for all between the ages of 5 and 21 years. In 1881 the number of educable children was 175,251 whites and 251,438 colored; enrolled in public schools, 112,994 whites, and 123,710 colored; average daily attendance 72,881 whites and 83,880 colored; teachers employed, 3,255 whites and 2,314 colored; total school expenditures, \$830,704. The University of Miss. includes a preparatory department and three general departments, viz., scientific, literary and professional. In 1881 there were 329 students in the literary department and 18 in the lower department. The income of the university is little above the amount needed for current expenses. It is greatly in need of a library building and books to put in it; the law department has no building; and a good refracting telescope ought to be provided for the observatory. One good building can be made to accommodate both the library and law department. The greatest need of the university, however, is good schools of a high grade in different parts of the State to prepare boys for the university, and to excite in them a desire for education. To have these schools there must be a supply of competent teachers, and to meet this demand there must be established a normal school for the special training of teachers. A normal department could be established and maintained at the university at a comparatively small expense. The agricultural and mechanical college had, in 1881, 354 students matriculated, and the average attendance was over 200. Alcorn agricultural and mechanical college is as prosperous as the impoverished condition of the colored people of the State will warrant. There were in attendance 160 students in 1881. The State normal school is doing much good in educating the colored youth of both sexes. The educational institutions of the State are almost exclusively for the instruction of young men. No facilities have been provided by the State for the instruction of females in the higher branches of learning. The penitentiary contained, in 1881, 876 convicts, of which 782 were colored, 92 white, and 2 Indians. The institutions for the deaf and dumb and for the blind are designed to be training schools rather than asylums. The asylum for the insane 442 inmates in 1881. All of the above institutions are located at Jackson. —Miss. is divided into 74 cos., viz.: Adams, Alcorn, Amite, Attala, Benton, Bolivar, Calhoun, Carroll, Chickasaw, Choctaw, Claiborne, Clarke, Clay, Coahoma, Copiah, Covington, DeSoto, Franklin, Greene, Grenada, Hancock, Harrison, Hinds, Holmes, Issaquena, Itawamba, Jackson, Jasper, Jefferson, Jones, Kemper, La Fayette, Lauderdale, Lawrence, Leake, Lee, Le Flore, Lincoln, Lowndes, Madison, Marion, Marshall, Monroe, Montgomery, Neshoba, Newton, Noxubee, Oktibbeha, Panola, Perry, Pike, Pontotoc, Prentiss, Quitman, Rankin, Scott, Sharkey, Simpson, Smith, Sumner, Sun Flower, Tallahatchie, Tate, Tippah, Tishomingo, Tunica, Union, Warren, Washington, Wayne, Wilkinson, Winston, Yalobusha, Yazoo. The cities are: Canton, Columbus, Grenada, Holly Springs, Jackson (the cap.), Meridian, Natchez and Vicksburg. —The State is governed under the constitution approved Nov. 30, 1869. The legislature, which meets annually, consists of 37 senators and 115 representatives, elected for 2 years. The governor and other executive officers are chosen for 4 years. The supreme court consists of 3 judges appointed by the governor and confirmed by the senate, who hold office for 9 years. The State sends 7 representatives to congress, and has 9 electoral votes. The total debt of the State in 1882 was \$2,363,251. The valuation of taxable property was \$116,289,810

(realty \$79,712,851; personalty, \$36,576,959). In 1682 La Salle took possession of this region in the name of the king of France, and called it Louisiana. In 1699 a fort was erected on the bay of Biloxi. The Choctaws, Chickasaws, Natchez and other Indians were bitterly hostile, and committed great depredations upon the settlers. Miss. Territory was organized April 7, 1798. On the 10th of Dec., 1817, Miss. was admitted into the Union as the 20th State. An ordinance of secession was passed Jan. 9, 1861. Biloxi was captured by the Federal forces, Dec. 31, 1861. Vicksburg, after a long siege, was captured by the Federal troops, July 4, 1863. On the 22d of August, 1865, the ordinance of secession was repealed. The 14th and 15th amendments were ratified in Jan., 1870; Congress passed an act of readmission, Feb. 23, 1870. Pop. in 1800, 8,850; in 1830, 136,621; in 1860, 791,305 (of whom 436,631 slaves); in 1870, 827,922; in 1880, 1,131,597 (of whom 567,177 males and 564,420 females; 1,122,388 natives and 9,209 of foreign birth; 479,398 whites, 650,291 colored, 51 Chinese and 1,857 Indians).

Mississippi, Ark., a N.E. co., bounded E. by the Mississippi R., and N. by Missouri; area, 900 sq. m. It is low, level, and subject to overflow. It is a congeries of swamps, bayous, and lakes, mostly covered with a jungle of dense woods and canebrakes. The firm land is very fertile. Cotton and corn are leading prod. Cap., Osceola. Val. of taxable prop. abt. \$2,000,000. Pop. 7,332 (of whom 103 for., and 2,661 colored).

Missoula, Mont., a N.W. co.; area, 20,091 sq. m. It is bounded N. by Canada and W. and S.W. by Idaho. It is traversed by Clark's fork of the Columbia R., and by several mountain ranges. It has much rich gold bearing land, and is in part densely timbered. Stock-raising and gold-mining are leading industries. Cap., Missoula. Val. of taxable prop. abt. \$1,000,000. Pop. 2,533 (of whom 690 for., 149 Chinese, and 522 Indians).

—p.v. & cap. of above co., on Missoula R., one of the principal forks of the Columbia R., and on theullan Stage-road from Fort Benton to Walla-Walla, in a pleasant valley near the Rocky Mts. The river is here spanned by a suspension bridge. Here are a nat. bank and a wkly paper. Pop. 441.

Missouri (Indian, *mud river*), the principal tributary of the Mississippi, rises in the Rocky Mts., and takes its name after the union at Gallatin City, Montana, of 3 branches denominated Jefferson, Gallatin, and Madison. The springs which give rise to the Missouri are not more than a mile distant from some of the head waters of the Columbia, which flows W. into the Pacific Ocean. At the distance of 411 m. from the extreme point of the navigation of its head branches, are what are denominated the "Gates of the Rocky Mts.," which present a view exceedingly grand. For the distance of 5½ m. the rocks rise perpendicularly from the margin of the river to the height of 1,200 ft. The river is compressed to the width of 150 yards, and for the first three

miles, there is only one spot, and that only of a few yards, on which a man could stand between the water and the perpendicular ascent of the mountain. At the distance of 110 m. below this, and 521 m. from its source are the Great falls, 2,575 m. above its entrance into the Mississippi. The river descends, by a succession of rapids and falls, 357 ft. in abt. 16½ m. The lower and greatest fall has a perpendicular pitch of 87 ft.; the second of 19 ft.; the third of 47 ft.; the fourth of 26 ft. Between and below these falls are continual rapids of from 3 to 18 ft. descent. The course of the river above these falls is northerly. The Yellowstone R., 800 yards wide at its mouth, probably the largest tributary of the Missouri, enters it on the S.W. side, 1,216 m. from its navigable source, and abt. 1,880 m. from its mouth, on the border of Montana and Dakota. This river, at the place of junction, is as large as the Missouri. Steamboats ascend to this place, and could go farther to the Great Falls almost at the very base of the mountains. Its other principal tributaries are the Little Missouri, Big Cheyenne, White Earth, Niobrara, Platte or Nebraska, Kansas, and Osage on the right, and the Milk, Dakota, Big Sioux, Little Sioux, and Grand on the left. The Missouri enters Mississippi R., 3,096 m. from its source, which added to 1,253 m., the distance to the gulf of Mexico, makes its whole length 4,349 m. Through its whole course, there is no substantial obstruction of the navigation, before arriving at the great falls. Its principal tributaries are each navigable, from 100 to 800 m. The alluvial, fertile soil on this stream and its tributaries is not very broad, and back of this are prairies of vast extent. Through the greater part of its course the Missouri is a rapid and turbid stream, and in the upper part of its course, flows through an arid and sterile country. It is over half a mile wide at its mouth, and through a greater part of its course it is wider. Notwithstanding it drains such an extensive country, and receives so many large tributaries, at certain seasons it is shallow, hardly affording sufficient water for steamboat navigation, owing to its passing through a dry and open country, and being subject to extensive evaporation.

—a central State, bounded N. by Iowa; E. by Illinois, Kentucky, and Tennessee, from which the Mississippi R. divides it; S. by Arkansas; and W. by Indian territory, Kansas, and Nebraska, from which it is divided by a N. and S. line on the meridian of the mouth of Kansas R., and thence N. by the main channel of the Missouri R. It is situated between lat. 36° and 40° 30' N., and lon. 89° 2' and 95° 42' W.; length N. and S. 277 m.; average breadth abt. 244 m., varying from 208 m. in the N. to 312 m. in the S.; area, 69,415 sq. m., including a narrow strip between the St. Francois and Mississippi Rs. in the S.E. The State presents a variety of surface and of soil. South of Cape Girardeau, with the exception of some bluffs along the Mississippi, it is alluvial, and a large proportion consists of swamps and inundated lands, most of which are heavily timbered. From thence to the Missouri R., and westward to the dividing ridge between Gasconade and Osage Rs., the country is generally covered with timber, rolling, and in some parts quite hilly; but no parts of the State are properly mountains. Along the head waters of Gasconade and Big Black Rs., the hills are frequently abrupt and rocky, with fertile alluvion along the water courses. Much of this region abounds with various minerals, as lead, iron ore, gypsum, manganese, zinc, antimony, cobalt, ochres, common salt, nitre, plumbago, porphyry, jasper, chalcodony, balthurstone, marble and free stone. The lead is inexhaustible in quantity and rich in quality. The iron ore of this region is sufficient to supply the whole U. States for many thousands of years. Bituminous coal exists in inexhaustible abundance. The W. part of this State is divided into prairie and for-

est land, and much of the soil is fertile. The whole is undulating, and along the Osage it is hilly, abounding with good water, salt springs and limestone. N. of the Missouri, the surface is diversified, and divided between timber and prairie land. From the Missouri to Salt R. good springs are scarce, and in several cos. artificial wells are dug, to be filled with rain water from the roofs of houses. Between Salt R. and Des Moines R. is a beautiful country, with a very fertile soil. In the middle cos. N. of the Missouri the surface is rolling, and there are some bluffs and hills, with considerable good prairie, and much timber. To the W. of this, and also to the N., the prairie predominates. Much of the prairie land in this State is inferior to the same kind of land in Illinois. But independently of some barren and inundated land, the State contains a great proportion of fertile soil. Indian corn, wheat, rye, oats, hemp, tobacco, flax, sweet potatoes, and in the S.E. parts cotton, are produced. Grapes are extensively cultivated in several cos., and large quantities of wine are annually produced. The forest trees and underwood, black and white, are walnut, oak of various kinds, locust, ash, cottonwood, papaw, yellow poplar, sycamore, dogwood and grape vines. In the S. part of the State cypress and red cedar are found. On Gasconade R. abt. 100 m. above its confluence with the Missouri, the timber is principally yellow and white pine, which is very valuable, being rare in the valley of the Mississippi. The State is particularly rich in minerals. The lead region, the centre of which is 70 m. S.W. of Missouri, is 70 m. long, and 45 wide, covering an area of 3,150 sq. m. The greatest part of this country is situated in Washington and St. Francis cos., but a part extends into St. Genevieve and Jefferson cos. The ore is of the richest kind. It yields from 80 to 85 per cent. of the true metal. Iron ore is equally abundant. In the S.E. part of Washington co. is the celebrated "iron mountain" filled with micaceous oxide of iron, which yields 80 per cent. of the pure metal. There is another body of iron ore denominated Pilot Knob, which is equally rich. Washington co. is a perfect bed of metallic treasures.—The Mississippi winds along the entire boundary of the State, for a distance of 400 m., and receives the waters of the mighty Missouri, which crosses the State, and deserves to be regarded, on account of its length, and the volume of its waters, as the parent stream. The Missouri receives La Mine, Osage, and Gasconade Rs. on the S. side, and Grand and Chariton Rs. on the N. side. Salt R. crosses the N.E. part of the State and enters Mississippi R., 85 m. above the mouth of Missouri R. Des Moines R. forms a part of the N.E. boundary of the State. Meramee R. rises near the head waters of Gasconade R., and after a devious course N.E., enters the Mississippi 18 m. below St. Louis. St. Francis, Current, Big Black, and Whitewater Rs. drain its S.E. part.—The climate is healthy, though subject to great extremes of heat and cold. The extreme range of the thermometer is from 100° above zero to 8° below. But these extremes are short, and not of frequent occurrence. The Missouri is frozen so hard as to be safely crossed by loaded wagons for a number of weeks in winter. The air is generally dry, pure and salubrious.—According to the U. States census of 1880, the coal mined during that year, from 144 mines in 13 cos., was 543,990 tons, valued at \$1,037,100. The yield of 48 iron mines in 8 cos. was 386,197 tons of ore, valued at \$1,674,875. The yield of 3 copper mines in Ste. Genevieve co. was 1,051 tons of ore, valued at \$25,730. The principal agricultural products for the census year 1880 were, 123,031 bbls. of barley, 202,485,723 of corn, 20,670,958 of oats, 535,426 of rye, 24,966,627 of wheat, 6,621,720 of potatoes—1,147,770 tons of hay, 11,027,720 lbs. of tobacco, and 30,318 bales of cotton. Among other valuable prod-

ucts may be enumerated hemp (which grows of the finest quality on the strong soils bordering the Missouri R. and in the elm lands of Marion and other cos.), flax, sorghum, broom corn, flax seed, grass seeds, castor beans, peanuts, honey and dairy products. The dairy interest is large and increasing. No State has greater advantages for the manufacture of choice butter and cheese than this. The live stock on farms in 1880 consisted of 667,776 horses; 192,027 mules; 9,020 working oxen; 661,405 milch cows, 1,410,507 other cattle; 1,411,398 sheep; and 4,553,123 hogs.—Mo. had, in 1880, 8,592 manuf. establishments, employing 63,995 hands; capital invested, \$72,507,-844; wages paid during the year, \$24,309,716; value of materials, \$110,798,392; value of products, \$165,-386,205. The manuf. interests of Mo. embraced a great variety of fabrics. Iron especially is worked in large quantities, and into almost every conceivable kind of articles. The city of St. Louis ranks third in the Union in the value and variety of its manufactures.—The foreign commerce of the State, though of considerable amount, is all indirect, it having little or no direct importations, and St. Louis being hardly more than nominally a port of entry for foreign commerce. The ports of New Orleans, Chicago, Milwaukee, New York, Philadelphia, Baltimore, and Norfolk afford it all necessary facilities for this purpose. Its domestic or interior commerce is of vast amount, and is transacted with all parts of the continent. Over the trans-continental railways and the Mississippi R. its freights of provisions, merchandise, gold, silver, quicksilver, lead, copper, iron and coal reach hundreds of millions, while its exportation eastward and southward of flour, grain, hardware, iron castings, pig iron, and a great variety of other products amounts to still greater sums. The amount of this traffic through the State annually must greatly exceed \$1,000,000,000.—Mo. had 38 m. of railroad in 1853; in 1860, 817; in 1870, 2,000; and in 1882, 4,211 of main track and branches.—The educational provisions of Mo. are commensurate with the magnitude of its territory and of its population. The available revenues from all sources for school purposes are nearly \$4,000,000. The total permanent invested school funds amount to \$7,278,000. There are in the State over 8,000 public school houses, with abt. half a million attendant scholars, instructed by 12,000 teachers. These schools are free to all children of proper age within their respective districts. The large towns and cities have graded and high schools. Many of them possess spacious, convenient and handsome school buildings. The public school system of St. Louis has for many years ranked among the highest and most efficient in the Union. Kansas City, St. Joseph, Hannibal, Brookfield, Chillicothe, Sedalia and Springfield are specially noted for their excellent public institutions of learning. Numerous private institutions, doing good work, are found in all the larger towns and cities. The State has provided for the education of teachers by the establishment and maintenance of three State normal schools at Kirksville, Warrensburg and Cape Girardeau. Lincoln institute, at Jefferson City, is devoted to the education of colored teachers, and receives annually a liberal State appropriation. The State university at Columbia ranks high as an institution of liberal and thorough culture. At this place, and as a department of the university, is located the State agricultural college. With it is connected an experimental farm of 640 acres. At Rolla is a school of mines and metallurgy. At St. Louis, St. Joseph, Springfield, Columbia, Hannibal, Palmyra, Canton, Fayette, Glasgow, Independence, Kidder, Liberty, Fulton and in other cities are denominational seminaries, academies and colleges, including, among others, law, medical, theological and polytechnic schools.—The State is divided into 114 cos., viz.: Adair, Andrew, Atchison,

Audrain, Barry, Barton, Bates, Benton, Bollinger, Boone, Buchanan, Butler, Caldwell, Callaway, Camden, Cape Girardeau, Carroll, Carter, Cass, Cedar, Chariton, Christian, Clarke, Clay, Clinton, Cole, Cooper, Crawford, Dade, Dallas, Daviess, De Kalb, Dent, Douglas, Dunklin, Franklin, Gasconade, Gentry, Greene, Grundy, Harrison, Henry, Hickory-Holt, Howard, Howell, Iron, Jackson, Jasper, Jefferson, Johnson, Knox, La Clede, Lafayette, Lawrence, Lewis, Lincoln, Linn, Livingston, McDonald, Macon, Madison, Maries, Marion, Mercer, Miller, Mississippi, Moniteau, Monroe, Montgomery, Morgan, New Madrid, Newton, Nodaway, Oregon, Osage, Ozark, Pemisecot, Perry, Pettis, Phelps, Pike, Platte, Polk, Pulaski, Putnam, Ralls, Randolph, Ray, Reynolds, Ripley, St. Charles, St. Clair, St. Francois, Ste. Genevieve, St. Louis, Saline, Schuyler, Scotland, Scott, Shannon, Shelby, Stoddard, Stone, Sullivan, Taney, Texas, Vernon, Warren, Washington, Wayne, Webster, Worth, Wright. The important cities are Booneville, Cape Girardeau, Hannibal, Independence, Jefferson City (the cap.), Kansas City, Lexington, Louisiana, Macon, St. Charles, St. Joseph, St. Louis (the commercial metropolis), Sedalia, and Springfield.—The State is governed under the constitution of 1865, as several times since amended. The legislature, which holds biennial sessions, consists of 34 senators elected for 4 years, and 131 representatives elected for 2 years. The governor and other State officers are elected for 2 years. The supreme court consists of 6 judges elected by the people for 6 years, and divided into two sections. Mo. sends 13 representatives to congress, and has 15 electoral votes. The State debt in 1881 was \$16,259,000. The valuation of taxable property was \$509,369,785.—Mo. was visited by Joliet and Marquette in 1673. The first settlement was made at Ste. Genevieve, in 1755. Up to 1751 there were but 6 settlements within 100 m. of the present site of St. Louis, which was founded in 1764. A combined attack upon the town by the British and Indians was successfully repulsed. The territory was purchased by the U. States from the French in 1803, as a part of Louisiana. Mo. was admitted into the Union as the 24th State, Aug. 10, 1821. Early in the civil war there were conflicts between the State militia and the U. State troops. Governor Jackson issued a proclamation declaring the State out of the Union. The battle of Wilson's Creek, in which Maj.-Gen. Lyon was killed, was fought Aug. 10, 1861. Maj.-Gen. Fremont declared martial law throughout the State on the 31st of August. In the early part of 1862 the Confederate troops held half of Mo., until Gen. Price was driven into Arkansas by a strong Federal force. A distressing guerrilla warfare kept the inhabitants in continual alarm. To the Federal side 108,773 soldiers were furnished during the war. Gen. Price again invaded Missouri in 1864, and was again forced to retreat. Pop. in 1810, 20,845; in 1840, 383,702; in 1850, 682,044; in 1860, 1,182,012 (of whom 3,572 free colored, and 114,931 slaves); in 1870, 1,721,295; in 1880, 2,168,380 (of whom 1,127,187 males and 1,041,193 females; 1,956,802 natives, and 211,578 of foreign birth; 2,022,826 whites, 145,350 colored, 91 Chinese, and 113 Indians).

Mobile, Ala., a river and bay in the S. part of the State. The river Mobile is formed by the confluence of the Alabama and Tombigbee. A few miles below this point it divides into two branches, the eastern one of which takes the name of Tensas, the western retaining that of Mobile. Before reuniting, both these streams separate into several other subdivisions, all of which meet in one common embouchure at the head of Mobile Bay. The length of the Mobile R. is abt. 50 m., and its general direction is S. In the lower part of its course the banks are marshy and alluvial.—The bay of Mobile is abt. 30 m. in length from N. to S., with a general width of 10 or 12 m., except where it expands on the S.E. into the subsidiary bay of Bon Secours, which extends some 8 or 10 m. further to the E. The entrance from the Gulf of Mexico, between Mobile point on the E. and Dauphin island on the W., is abt. 3 m. wide, and is commanded by Fort Morgan on Mobile point, and Fort Gaines on Dauphin island. The bay has another outlet on the southwest through Grant's pass, N. of Dauphin island, which communicates with Mississippi sound. Through this channel steamers and other vessels of light draught generally pass when plying between Mobile and New Orleans. The bar in front of the main entrance of the bay admits of the passage of vessels drawing 21 or 22 ft. The ordinary anchorage for ships is 4 or 5 m. within the entrance of the bay. The whole of the upper portion of the bay is shallow, and is supposed to be gradually filling up with sedimentary deposits from the rivers that flow into it. There is a light-house on Mobile point; another on Sand island, 3 m. S., immediately in front of the entrance; and one at the head of the bay, a little below the city of Mobile.

—the most S.W. co.; area, 1,200 sq. m. It is bounded E. by Mobile R. and Bay, S. by the Gulf of Mexico, and W. by Miss. It is generally level, sandy, and covered with pine forests. Rice and lumber are leading prod. The co. has important commerce and manufactures, chiefly carried on at Mobile, the cap. Val. of taxable prop. abt. \$30,000,000. Pop. 48,602 (of whom 3,893 for., and 21,426 colored).

—a city ♦ and port of entrance, cap. of Mobile co., on Mobile R., near its entrance into Mobile Bay, 30 m. above the Gulf of Mexico, 140 m. E. of New Orleans,

at the point of junction of L.&N. and M.&O.R.Rs., situated on a sandy plain gently rising from the river's bank, is regularly built, well paved, lighted, and shaded, has a fine supply of water from Spring Hill, 5 m. distant, has 6 lines of street railroads, and enjoys a climate usually healthy, though subject to occasional ravages of yellow fever. The suburbs embrace several beautiful hills, upon which are the summer residences of the wealthier citizens, and which afford a healthful resort in seasons of epidemic. The harbor is extremely shallow, but has been of late so much improved that vessels drawing 13 ft. of water can now reach the wharves. Mobile has 2 nat. and 4 other banks, 9 insurance companies, 30 churches, 2 daily and 3 wkly papers, an extensive public school system, besides numerous private schools, a Jesuit college at Spring Hill, an academy, conducted by the Sisters of the Visitation at Summerville, and 7 other Catholic schools, Barton Academy, the Alabama Medical College, 4 orphan asylums, a city hospital, a U. States marine hospital, the Providence Infirmary, a spacious custom-house, affording accommodations for the post-office, and the U. S. courts for the southern district of Alabama, a fine market-house, with municipal offices above, an extensive export trade, chiefly in cotton and naval stores, of lumber, rosin, and turpentine, and a moderate import trade, of which coffee forms the most important article. The value of exports for the year 1880 was \$6,219,818; of imports, \$544,628. The annual entrances from foreign ports average about 50, and from domestic ports 130, of which 65 sailing vessels of 7,325 tons, and 40 steamers of 6,667 tons in aggregate were owned here in 1880, the latter plying upon the Alabama, Tombigbee, and Black Warrior Rs. Mobile was founded in 1702 by Lemoyne de Bienville as the cap. of Louisiana, which it continued to be until 1723. It passed to England in 1763; was captured by Spain in 1780, and ceded to the U. States in 1813, the pop. being then only 500. Pop. in 1870, 32,034; in 1880, 29,132.

Montana, a territory, bounded N. by British America, E. by Dakota, S. by Wyoming and S.W. and W. by Idaho. It is situated between lat. 44° 10' and 49° N., and lon. 104° and 116° W. The extreme length from E. to W. is 550 m., the breadth 280 m., and the area 146,080 sq. m. Mont. is naturally divided by its physical conformation into four sections. The N.W. district, between the Rocky and Bitter Root Mts., is broken and rugged, and intersected by many mountain spurs. The N. district, extending for 350 m. along the Milk and Missouri Rs., is an open plain, destitute of trees, and descending towards the E. at the rate of five feet to the mile. The S.E. section is more rolling and better wooded. The S.W. section, containing 15,000 sq. m., is mountainous and covered with dense forests. Among the highest mountains are Electric Peak (10,992 ft.), Emigrant Peak (10,629), Mount Delano (10,200) and Mount Blackmore (10,134). Three-fifths of the territory is a broad open plain, and the mean elevation is 3,950 ft. Towards its S. boundary it dips into that remarkable region, the Yellowstone national park, a part of which is within its limits. "In this 'Land of the Mountains,' or *Toy-abe Shock-up*, as the Snake Indians call it, there is a loneliness, silence, and sublime grandeur that is exceedingly impressive. Every one feels it when entering the territory, and it seems to hold them ever afterward. The solitudes are so profound, the mountain heights so awe-inspiring in their magnificent proportions, that man is overpowered by them. No noises break upon the air; even the birds and animals are mute. Above there is a sky of serene beauty, and all around an atmosphere that is purity itself. No noisome exhalations from stagnant pools and decaying vegetation are encountered, nor is there anything to mar the harmony of the scene. On every hand rise gigantic peaks, many of them covered with perpetual snow, and away off in the distance may be traced the sinuous courses of rivers and streams, whose banks are bordered with thick growths of trees and bushes." A. G. Brackett. Three of the great continental rivers rise within the borders of Mont., one of which, the Yellowstone, navigable for a distance of 450 m., lies wholly within its boundaries; and the Missouri, from its source, "The Three Forks," is carried nearly a thousand miles on Montana soil, or about one-quarter of its entire length, while in the valleys of the W. slope gather the waters that unite to form the great Columbia that pours its flood into the Pacific. It is estimated that fully three-fifths of the surface of the territory is suitable for agricultural purposes, and nearly another fifth could be added to cover the extent of surface adapted for grazing. Early frosts may occasionally interfere with the ripening cereals, but as a rule the seasons compare favorably with many of the more southerly points on the eastern plains. The

rainfall of this region is slight in comparison with many other districts on the same parallel, but the streams that flow from the mountain ranges furnish an abundant supply of water for purposes of irrigation, which, as a basis of agriculture, is far more reliable and secures better results. "By the most conservative," says the U. States surveyor of Montana (Report of Aug. 19, 1882), "the pop. of Mont. is estimated at 55,000, and the increase of the last two years is made up almost wholly of the producing classes, many agriculturists having been attracted to the E. portion of the territory by the progress and liberal policy of the N.P.R.R., while the rich grasses of the many valleys, such as the Judith, Musselshell, Tongue River, and the Yellowstone, have attracted the attention of stockmen generally, many having moved their ranches from Wyoming and other points to the more attractive grazing lands of Montana. The Lower Yellowstone and its tributaries, especially those from the S., flow through first-class arable lands, and in many cases are capable of producing crops without irrigation. The advance of the Northern Pacific in 1882, has been rapid, and with the close of the present season the road will be in operation to Bozeman, 110 m. from Helena. The Utah and Northern branch of U.P.R.R., has been extended to Deer Lodge, 40 m. W. of Helena, and is being extended N. to a connection with the Northern Pacific. With the opening of another season Mont. is, therefore, bound to receive a material increase in pop. from immigrants looking for homes. Here is an immense territory where a larger proportion of productive lands are open to pre-emption than in any other equal area of the U. States. Stock-raising is an important industry, and is growing rapidly; but the most attractive of all pursuits is that of mining, upon which depends the future prosperity of this territory. From 1863 to the close of the year 1880, Mont. has added to the permanent wealth of the world, in gold and silver, over \$160,000,000, and the production of bullion for 1882 aggregated at least \$7,000,000. As the production of silver is on the increase, a larger total may be expected in the future from year to year. With the advent of railroads cheaper transportation facilities will be afforded, and a lower grade of ore may be profitably worked than has hitherto been possible. Bullion and ore may be more cheaply shipped and all the necessaries of life greatly reduced in cost, and labor, therefore, rendered more reasonable. Lewis and Clarke and Jefferson cos., contain several rich mining districts, among which may be mentioned Red Mt. and Teu Mile, Belmont, Wickes, Clancy, and the Gregory district. Virginia City is one of the oldest and most productive of the gold placer mining districts. Among the most promising of the newly discovered districts, Clarke's Fork, or Cooke City, as it is now known, situated near the S. boundary of the territory, in the restored portion of the Crow Indian reservation, has attracted considerable notice of late. The district surrounding the town of Butte is in the lead as regards production, and the great richness of the mines is scarcely known outside of Mont. There are 7 mills, 4 smelters and 3 concentrators now in operation, yet the facilities for treating ore are entirely inadequate. The Alice company operates 65 stamps in one mill, which is the largest dry crusher in the world. With the completion of the N.P.R.R. and other lines in construction or contemplation, and with the increase in her mining industries, it may be justly predicted that Mont. is about to enter upon a field of development and growth of which the surrounding territories have hitherto held the supremacy." The assessment val. of taxable prop. in Mont. for the year 1881 was as follows: 424,700 acres of land and improvements, \$3,511,646; 7,147 town lots and improvements, \$3,080,772; 63,114 horses, \$2,406,328; 2,267 mules and

asses, \$151,907; 260,402 sheep, \$720,228; 253,440 cattle, \$3,694,871; 8,347 hogs, \$38,248. The Territory of Mont. was established by act of congress, May 26, 1864, and is governed as the other Territories of the Union. It is divided into 12 cos., viz.: Beaver Head, Choteau, Custer, Dawson, Deer Lodge, Gallatin, Jefferson, Lewis and Clarke, Madison, Meagher, Missoula and Silver Bow. The principal towns are: Bozeman, Butte City, Deer Lodge City, Dillon, Fort Benton, Helena (the cap.), Miles City, Missoula, Radersburg, Virginia City and White Sulphur Springs. Pop. in 1870, 20,595; in 1880, 39,159 (of whom 28,177 males and 10,982 females, 27,638 natives, and 11,521 of foreign birth, 35,385 whites, 346 colored, 1,765 Chinese and 1,663 taxed Indians). The tribal Indians, according to the report of the commissioner of Indian affairs for 1882, number 18,705. Their reservations are divided into 5 agencies, viz.: Blackfeet, Crow, Flathead, Fort Belknap and Fort Peck.

—a city ♦, cap. of above co., on Muskegon R., where it expands into a lake of the same name, near its mouth in Lake Michigan, on C.&W.M.R.R., 90 m. N. W. Lansing, and 175 m. W.N.W. Detroit. It is a stopping place for the East Shore steamboat line, and has a daily line of steamers to Chicago. The soil in the vicinity is well adapted to fruit growing, and considerable attention is paid to the cultivation of peaches and grapes; but the chief business of the city is manuf. and shipment of lumber. The logs are floated down the river to the lake, which is 5 m. long and 2 m. wide. The annual shipments amount to about 300,000,000 ft. The trade employs more than 100 vessels, and large quantities are also shipped by rail. The principal manuf. establishments are 32 saw mills, 2 flouring mills, 2 large steam engine works,

and foundries, 2 saw factories, a boiler factory, and 5 planing mills, and sash and blind factories. The city has 2 nat. banks, a union school, 1 daily, 1 semi-wkly and 3 wkly papers, and 12 churches. Muskegon was first settled in 1836. It was incorporated as a city in 1870. Pop. in 1870, 6,403; in 1880, 11,262. Pop. of tp. (city excluded) 924.

Nantucket, *Mass.*, a co. and tp., co-extensive

with each other, comprising the island of Nantucket, the islets of Tuckernuck and Muskeget, and the Gravelly and Swyle Islands adjacent to it on the W.; aggregate area, 48 sq. m. Nantucket island is situated in the Atlantic ocean, 18 m. S. of Cape Cod, 85 m. S.E. Boston, and is separated from Martha's Vineyard on the W. by a channel 8 m. wide. It is of an irregular triangular form, abt. 16 m. long from E. to W., and for the most part from 3 to 4 m. wide, with an area of abt. 45 sq. m. It has a level surface in the S., and is slightly hilly in the N. The soil is light, and with the exception of some low pines, the island is treeless. There are several ponds containing fine fish. Farming and fishing are the chief occupations of the people, the surrounding waters abounding in fish of various kinds. The climate is mild in winter and cool in summer, and the island has of late become a favorite summer resort. It constitutes a customs district, but has little commerce. There is a light-house on Sankaty Head (lat. 41° 17' N., lon. 69° 57' 35" W.), near the S.E. extremity of the island; another, known as Nantucket light, on Sandy or Great Point (lat. 41° 23' 22", lon. 70° 2' 25"), at the N.E. extremity; and several W. of the entrance to Nantucket Harbor. Wrecks are not infrequent. Nantucket shoals, about 50 m. long and 45 m. wide, are S.E. of the island, and are dangerous to navigation. There are 2 p.v.s., Nantucket on the N. side of the island, and Siasconset on the S.E. Nantucket Harbor is deep and secure, though the entrance is obstructed by a bar with only 7½ ft. of water at low tide. Steamers run daily to Wood's Hole on Cape Cod, connecting with railroad for Boston. The v. of Nantucket, p.♦ and cap. of the co., has a nat. and a savings bank, 2 wkly papers, the Coffin high school, and an atheneum containing a museum of marine curiosities and a library of 4,500 volumes. Nantucket has been chiefly noted as a seat of the whale fishery, having been at one time the chief whaling port of the world. The town increased in size and prosperity till 1846, when it was visited by a severe conflagration, destroying property to the value of nearly \$1,000,000. After this the whale fishery and with it the prosperity of the town rapidly declined. Pop. in 1840, 9,012; in 1870, 4,123; in 1880, 3,726.

Nashville, Tenn., the cap. and metropolis of the State, also cap. of Davidson co., is a beautiful and prosperous city, pleasantly located on the S. bank of Cumberland R., 200 m. above its junction with the Ohio, on L.&N. and N., C.&St. L.R.Rs., 233 m. E.N.E. Memphis, and 240 m. S.S.W. Cincinnati. The city rests upon a series of hills composed of solid limestone, and a range of hills surround it, presenting a fine panoramic view from all sides. Two bridges connect Nashville with Edgefield, on the other side of the river, which now forms part of the city. Not another city in the South can claim so great a number of imposing public structures, including educational, religious, society and other institutions. On Capitol Hill, overlooking the city, is situated a State Capitol, built of Tennessee granite, and one of the finest and costliest buildings in the U. States. The new custom-house, built in the pointed Gothic style, is also one of the most beautiful buildings of the kind in this co. The Exposition building completed in 1880, and capped by a magnificent dome, is admirably arranged and commodious. The State penitentiary buildings occupy three sides of a hollow square enclosed by a massive stone wall, within which are numerous workshops. The Hermitage, the celebrated residence of Andrew Jackson, is 12 m. E. of Nashville. The city has several lines of street railway. It is lighted with gas, and is supplied with water by expensive works, which raise it from the river to four reservoirs. The principal charitable and reformatory institutions are the state institution for the blind, several hospitals, two orphan asylums near the city, the city workhouse, and a house of industry for females. About 6 m.

from the city is the eo. poor-house, and abt. the same distance the State hospital for the insane. Nashville is the seat of several important educational institutions, among which are the Vanderbilt, Fisk, and Nashville universities. The Montgomery Bell academy, 2 seminaries, the State normal school, Tennessee school for the blind, Saint Cecilia Academy, two medical and two dental colleges and a College of Pharmacy. For the colored people there are the Central Tennessee College, the Baptist normal and Theological Institute and a medical college—the only one of the kind in the world. Nashville is the chief commercial centre and wholesale market S. of the Ohio R. It requires an average of \$5,000,000 to handle the cotton crop which comes into it. The tobacco trade is also of great magnitude. The dry goods business aggregates \$4,000,000 annually; the liquor-trade abt. the same; the boot and shoe interest amounts to \$2,000,000 annually; while the grocery, provision, drug, furniture, coal, and other trades show an actual business of over \$50,000,000 annually. The city is supplied with a paid fire department, with steam-engines and an electric fire-alarm telegraph. It has a cotton factory, 7 saw and 5 flouring mills, 8 planing and sash factories, 2 cotton-seed-oil mills, 2 tanneries, 4 furniture and 4 carriage factories, 6 foundries and machine shops, &c. Nashville has 60 churches, a public library of 25,000 volumes, 4 nat., 1 private, and 2 savings banks, 3 fire insurance companies, 3 daily and numerous wkly and monthly papers, 2 theatres, an opera-house, a handsome masonic temple, 2 far-famed mineral springs, &c. On Dec. 15 and 16, 1864, a decisive victory was gained by the Union forces under Gen. G. H. Thomas, over the Confederates under Gen. Hood. Pop. in 1870 (actual limits) 30,260; in 1880, 43,461.

Natchez, Miss., a city and port of entry, cap. of Adams eo., the 2d city in the State in pop. situated on the E. bank of the Mississippi R., 279 m. above New Orleans and 116 m. below Vicksburg by water and 85 m. in a direct line S.W. Jackson. It is built on the summit of a bluff 150 ft. above the water, and on the narrow strip of land between the foot of the hill and the river. The latter portion of the city, called Natchez Landing or Natchez-under-the-Hill, has some important business houses, but can make no claim to beauty. It communicates by broad and well graded roads with the upper quarters (Natchez-on-

the-Hill), which are beautifully shaded and contain many handsome residences and other buildings. The streets are regular, lighted with gas, and generally gravelled in the roadway. The houses are principally of brick, and the residences are adorned with gardens. Natchez is the seat of a Catholic bishop; it has a Catholic cathedral, a Jewish synagogue, a Masonic temple, an Odd Fellows hall, a daily and wkly and a tri-wkly paper and several mills and factories. Handling cotton is the chief business. Natchez is the name of a tribe of Indians now reduced to abt. 250 souls mixed with the Chickasaws and Muskogees. P. 7,058.

Nebrask'a, a W. State, bounded N. by Dakota, E. by Iowa and Missouri, S. by Kansas and Colorado, and W. by Colorado and Wyoming. It is situated between lat. 40° and 43° N., and lon. 95° 21' and 104° W. The extreme length from E. to W. is 412 m., and the breadth from N. to S. 208 m.; area, 76,855 sq. m. The surface of Neb. is exceedingly varied. There are indeed no elevations that can be dignified with the name of mountains, but in the N. and W. parts of the State there are lofty hills of very varied character. Generally the ascent is gentle, though occasionally it is precipitous. In the Eastern States, the body of hills is mainly made up of massive rocks; here it is partly composed of loosely compacted drift materials. Along the Niobrara and White Rs., extending into Dakota, are "sand-hills," exhibiting only a scanty vegetation, and very difficult to traverse on account of the loose sand. Abt. 20,000 sq. m. of this formation are unfit for cultivation and almost destitute of timber. In fact, Neb. emerged so recently, geologically, from the waters of the loess age, that it still exhibits, as a whole, many of the phenomena of a recently drained lake bed. The gently rolling lands of three-fourths of the State appear very much like the suddenly petrified waves and billows of the ocean. Sometimes extensive stretches of surface are met with that appear to be level, but closer observation shows even these to be gently undulating. From these last mentioned forms to the few isolated sections of limited extent, broken by canyons with pre-

cipitous sides, the transition is gradual. Every shade of form and surface connects the two varieties of reliefs. The bottom lands are the most conspicuous modifying feature of the landscape of the State. In crossing the State at right angles to the direction of the streams, the bottom lands are met with every few miles. They are huge, generally shallow, troughs, in breadth proportionate commonly to the size of the streams. They range in width from a quarter of a mile on the smaller streams to 23 m. on the Platte and the Missouri. They are frequently terraced, and the terraces, like broad steps, gradually lead to the bordering bluffs, which, in turn, are very varied in height and form. The bluffs are steepest and roughest on the Missouri, especially towards the N. line of the State. On the middle Niobrara they frequently assume the exceptional character of borders to deep cañons. Even on the Missouri there are very few that cannot be successfully cultivated.—Minerals have not yet been found to any considerable extent, and the scarcity of coal renders more valuable the extensive beds of peat found in some parts of the State. The salt basins of Neb. are rich and extensive. The principal one is located in Lancaster co., surrounding the city of Lincoln, and embracing an area of 12 by 25 m. The brine from the springs yields 29 per cent. by weight of good salt. In the same co. there are inexhaustible quarries of sandstone, which is very soft when quarried, but hardens by exposure to the air. Blue limestone is found near the head waters of Salt Creek, and near Lincoln; also a beautiful gray magnesian limestone, as susceptible of fine polish as Italian marble. Fossil remains of great interest to geologists have been discovered in great quantities. Indian hieroglyphics which antedate the traditions of all living tribes are cut deep in the bluffs along the Missouri R. in places now inaccessible.—Geologists are of the opinion that the prairies have grown no trees during the present geological era, but many fossils remains of tropical and sub-tropical vegetation are found in the tertiary formation. Since the prairie fires ceased many young trees have been planted, which grow with great rapidity. One farmer set out 120,000 trees in a single year. A cottonwood, 7 years old, measured 2 ft. 6 inches in circumference; a maple, 10 years old, 2 ft. 8 inches; a locust of the same age, 2 ft. "The common trees can be raised from the seed, as well as corn or beans," says Prof. Hayden's Report. Peach trees bear in 3 years and apple trees in 4 or 5 years. The indigenous trees, growing chiefly along the water courses, are the cottonwood, soft maple, elm, butternut, basswood, oak, black walnut, honey locust and willow. Timber is most abundant in the S.E. counties. The number of forest and fruit trees planted during the census year 1880 was: 57,769,894 forest trees, 2,269,627 fruit trees and 467,636 vines.—The Missouri R. forms the whole of the E. boundary of Neb. The Platte, or Nebraska R., from which the State received its name, is a broad and shallow stream, fordable almost everywhere at low water. Its principal tributaries are the Coldwater, Loup Fork, and Elkhorn. The S. part of the State is drained by the various branches of the Kansas R., of which the largest are the Republican Fork, Little Blue and Big Blue Rs. The N. eos. are drained by the Niobrara, a rapid stream 400 m. long, which forms a part of the N. boundary and empties into the Missouri. Along the streams are wide fertile bottom lands with a rank vegetation. The soil has a siliceous marl, like the "loess" along the Rhine. Sometimes the vegetable humus extends to a depth of from 10 to 20 ft. From 2 to 4 tons of grass or 52 bushels of wheat to the acre is not an uncommon yield. A height of 6 ft. is attained by the "blue joint" grass. The upland soil is 18 or 20 inches thick. It is claimed that there is hardly a foot of land in E. Neb. which is not suscepti-

ble of cultivation. The winters are not very long; open weather continues until the end of Nov. and spring weather begins with March. Corn is planted in April. High winds sweep over the plains, and the storms are sometimes of terrible severity. The climate is dry and exhilarating; the mean temperature in winter is abt. 22°, and in summer abt. 70°. The heat of the summer is tempered by the prairie winds, and the nights are generally cool. According to the observations made by the U. States signal service at Omaha (lat. 41° 16', lon. 96°), the annual mean as indicated by the barometer was 29.9 inches; thermometer, 48.1°; total fall of rain, including snow, 34.8 inches; prevailing wind, S.E. The greatest amount of rain falls in May and June.—The principal agricultural prod. for the year 1880, according to the census of that year, were as follows: barley, 1,744,686 bush.; corn, 65,450,135; oats, 6,555,875; rye, 424,348; wheat, 13,847,007; potatoes, 1,086,750; hay, 564,564 tons. Neb. had of improved lands, 3,498,906 acres, and unimproved lands (not public), 9,768,375 acres. There is no part of the U. States better adapted for stock raising than the prairies of Neb. Throughout the State there are hundreds of small herds of from 20 to 100, and on the plains in the extreme western part of the State there are large herds numbering hundreds and thousands that rarely taste other food than the wild grasses and hay made from them from the beginning to the end of the year. These rich grasses cost the herdsman not a farthing. They have fed the buffalo, deer and antelope for centuries, and are to-day the richest legacy these far-reaching prairies offer to man. The gulches and cañons furnish shelter for cattle and sheep, and two months of spring grazing fits them for the prime markets. The live stock in 1880 consisted of 198,381 horses, 675,244 cattle, 20,032 mules, 194,959 sheep, and 767,702 hogs.—In 1880, there were in Neb. 1,403 manuf. establishments, employing 4,793 hands; capital invested, \$4,881,150; wages paid during the year, \$1,742,311; value of materials, \$8,208,478; value of products, \$12,627,335. Manuf. industries and trade are largely progressing since 1880.—Neb. had in 1882, 2,310 m. of railroad in operation. The school lands occupy 2,700,000 acres, which, at the estimated value of \$7 per acre, would afford a school fund of \$18,000,000. These lands are sold to a limited extent only, the larger proportion being leased on 20 years' time at 6 per cent. interest on the appraised value. Although the State is yet so young, quite a handsome income is being derived from this source, and in the years to come it will be an immense source of revenue to the common schools of the State. Aside from these common schools the State supports a well-equipped university at Lincoln, a normal school for the instruction of teachers, an institute for the blind at Nebraska City, an institution for deaf and dumb at Omaha, and a State reform school at Kearney (organized in 1882). The revenue applied to common school purposes for the year 1880 amounted to \$1,108,617.23. In the year 1880 there were organized in the State 3,132 school districts to meet the needs of 142,348 children within the school age, out of which 92,549 are enrolled. The teachers employed numbered 4,100, and the amount paid for salaries was \$549,200.41, the average salary per month for males being \$36.12 and females \$31.92. The school houses numbered 2,701, and the value of school property, including sites, buildings and furniture, \$2,064,768.—The State is divided into 70 eos., viz.: Adams, Antelope, Boone, Buffalo, Burt, Butler, Cass, Cedar, Chase, Cheyenne, Clay, Colfax, Cuming, Custer, Dakota, Dawson, Dixon, Dodge, Douglas, Dundy, Fillmore, Franklin, Frontier, Furnas, Gage, Gosper, Greeley, Hall, Hamilton, Harlan, Hayes, Hitchcock, Holt, Howard, Jefferson, Johnson, Kearney, Keith, Knox, Lancaster, Lincoln, Madison, Merrick, Nance, Nemaha, Nuckolls, Omaha Re-

serve, Otoe, Pawnee, Phelps, Pierce, Platte, Polk, Red Willow, Richardson, Saline, Sarpy, Saunders, Seward, Sherman, Sioux, Stanton, Taylor, Thayer, Valley, Washington, Wayne, Webster, Wheeler, York. The principal cities and villages are Omaha (the chief commercial city), Lincoln (the cap.), Plattsmouth, Nebraska City, Crete, Beatrice, Fairmont, Harvard, Hastings, Kearney, Seward, York, Grand Island, Columbus, Fremont and Falls City.—The governor and other executive officers are elected for two years, except the auditor, who is elected for four years. The legislature consists of a senate and a house of representatives, whose members are elected for 2 years. The legislature meets biennially on the Thursday after the first Monday in Jan., odd years. An act was passed during the session of 1881, apportioning the State into 31 senatorial and 59 representative districts, and defining their respective limits. The act assigns one member to every senatorial district, except the 7th and 16th, which may elect two senators each, and from one to eight members to every representative district, in proportion to its extent and pop. In consequence of this apportionment, the members of the legislature has been numerically increased—in the senate from 30 to 33, and in the house of representatives from 84 to 98. The judiciary comprises a supreme court, district courts, probate courts, and justices of the peace. The supreme court consists of a chief justice, and two associate justices, elected for a period of 6 years. Neb. sends 3 representatives to Congress and has 5 electoral votes. The State debt in 1882 was \$499,267. The State receipts for the two years 1881–1882 were \$1,943,307; disbursements, \$1,814,211. The val. of taxable prop. in 1882 was \$98,537,475.—This territory was organized in accordance with the Kansas-Nebraska act passed May 30, 1854. Parts of Colorado and Dakota were included within its original boundaries. Indian outrages marked the early history of Neb., as of every other new State. On the 1st of March, 1867, Neb. was admitted into the Union as the 37th State. Pop. in 1860, 28,841; in 1870, 122,993; in 1880, 452,402 (of whom 249,241 males and 203,161 females; 354,988 natives and 97,414 of foreign birth, 449,764 whites, 2,385 colored, 18 Chinese and 235 taxed Indians).

Nevada, a W. State, bounded N. by Oregon and Idaho, E. by Utah and Arizona, S. W. and W. by California. It is situated between lat. 35° and 42° N., and lon. 114° and 120° W. The portion above the 39th parallel is a rectangular parallelogram and the portion below a right-angled triangle, with one angle cut away by the Colorado R., which constitutes the extreme S. E. boundary. The length of the State from N. to S. is 485 m. and its greatest breadth from E. to W. 320 m.; area, 110,700 sq. m. Most of Nevada belongs to the "Great Basin," a table-land elevated 4,500 feet above the sea. This is traversed with great uniformity by nearly parallel mountain ranges rising from 1,000 to 8,000 ft. higher, and running almost without exception, in a direction N. and S. Long narrow valleys lie between them, sometimes redeemed from sterility by streams of water, but often barren and verdureless. The Sierra Nevada, from 7,000 to 13,000 feet in height, extends along the W. boundary. Marked signs of volcanic agency are shown in the formation of the mountains, rocks, minerals and lakes. The largest and only navigable river is the Colorado. Humboldt R. rises in the mountains and empties into a lake of the same name after a course of 300 m. Walker R. and Carson R. rise in the Sierras and flow into lakes which have no visible outlet. Lake Tahoe, lying partly in California, is 21 m. long, 10 m. wide and 1,500 feet deep. Although it is elevated 6,000 feet above the sea, the water never freezes, and has a mean temperature of 57 for the year. Among the remarkable physical features of Nevada are its hot springs, some of which are 100 feet in diameter, 150 feet deep and have a temperature of 206 degrees. The Steamboat springs, in Washoe co., register a temperature of 204 degrees. Chemical analysis shows that the mineral ingredients of these waters are the chlorides of magnesium and sodium, lime, sulphur and iron. A heavy growth of timber, principally pine, fir and spruce, covers the eastern slopes of the Sierra Nevada, many at-

taining enormous size. The timber in the interior is mainly cottonwood, birch, dwarf cedar, nut pine, and wood of softer texture.—The climate is in general comparatively mild, little snow falling except on the mountains. In the N. and interior the average summer temperature at noon is 90°, falling to 70° at night. In the severest weather in winter the thermometer ranges from 0° to -15° or -20°. In the S.E. the winters are milder, frosts being rare in the valleys, and the summers hotter; the thermometer in May and June ranges from 95° to 115°. Little rain falls, artificial irrigation being necessary to agriculture.—The soil produces spontaneously in the valleys away from springs or streams, sage brush, greasewood and bunch grass, the latter being scarce in such localities. There are many alkaline flats and extensive sand plains where nothing grows. The mountains are more or less covered with soil and their elevation makes of them the water reservoirs of the country. In consequence of this the timber is found there, as well as the best grazing lands in the State, except the irrigated valleys. The snow melting in the mountains creates numerous springs lower down and small creeks or streams, which flow into basins or out to the valleys, where they are usually lost in the soil or sand. Along these water courses the wild grass sometimes grows and carpets the soil, and the high price of hay (about \$20 per ton), renders these desirable localities for ranches or farms. In 1880 but 81,106 acres were reported as under cultivation, a trifle over one acre in a thousand of the total area. Fruit is scarce. The climate is not favorable for its maturity. The market for all products grown upon the soil is found inside the State at high and profitable rates, the high railroad freights serving the purpose of a kind of protective tariff for the farmers. The grazing area of the State, not including agricultural land, is laid down by the surveyor general as being over 5,000,000 acres, but its capacity is not equal to one-fifth of that amount in the E. States, and on account of being overstocked is rapidly deteriorating. A large number of cattle are yearly transported by railroad from this State to California in search of a market. In 1880 the number shipped from stations in Humboldt co. alone, was valued at \$1,500,000. The kinds of stock grown for a market outside of Nev. are cattle and sheep, the latter for their wool; all other kinds are raised for the home demand.—The mineral products in their relative order of values, are gold, silver, copper, iron, lead, sulphur, borax, salt, soda. The first discovery of argentiferous ore was made on the Comstock lode in 1859, from which more than \$100,000,000 have been taken, the greatest annual yield being \$16,000,000. In 1868 billion worth \$10,000,000 was mined. This has been the most valuable silver bearing lode ever discovered in the world, exceeding in wealth the mines of Peru and Mexico. After being for years a source of immense income to its owners, the Comstock yields at present principally low grade ores, and is operated at a loss. Silver bearing lodes are worked in Humboldt, Esmeralda, Lander, Nye and Lincoln cos., and in Lincoln co. is found gold and copper, as in other parts of the State. The mining interests of Nev. outside of the Comstock have of late centered in the White R. district, having an area of abt. 12 sq. m. The White Pine mines are 125 m. E. by S. of Elk's station on the Pacific RR. For the year 1881 the yield of the mines, which in 1874 reached \$95,500,000, was reduced to \$9,310,000 (gold, \$2,250,000; silver, \$7,060,000).—The manuf. interests are not progressing. According to the U. States census of 1880 Nev. had 184 manufacturing establishments (against 330 in 1870) employing 576 hands; capital invested, \$1,323,300 (\$5,127,790 in 1870); wages paid during the year, \$461,807; value of material, \$1,019,794; value of products, \$2,179,626 (\$15,870,539 in 1870). The State had in 1882,

890 m. of railroad in operation.—The educational facilities are as complete and far advanced as could be expected with all the unfavorable circumstances naturally attendant upon the establishment of a practical public school system in a State which covers so extensive an area, has few facilities for travel, and is sparsely settled.—Nev. is divided into 15 cos., viz.: Churchill, Douglas, Elko, Esmeralda, Eureka, Humboldt, Lander, Lincoln, Lyon, Nye, Ormsby, Roop, Storey, Washoe, White Pine. The principal towns are Carson City (the cap.), Virginia City and Gold Hill (united in 1881 into one government under the administration of the commissioners of Storey co.), Hamilton, Treasure, Elko, Pioche City, Reno, Dayton, and Silver City. The legislative authority is vested in a senate of 20 members elected for 4 years and an assembly of 40 members elected for 2 years. Biennial sessions are held. The governor (salary \$6,000), and other executive officers are chosen for 4 years. The supreme court council of 3 judges (salary \$7,000 each), elected for 6 years. Nev. sends one representative to congress and has 3 electoral votes. The financial condition of Nev. has of late manifested a marked downward tendency, the various sources of her revenue having materially decreased in amount and number. In 1881 the receipts into the Treasury aggregated \$923,159; expenditures, \$1,276,050. The bonded State debt was \$600,000. Valuation of taxable property, \$26,598,658.—Nev. was ceded by Mexico to the U. States in 1848. A Territorial government was organized in 1861, and on Oct. 31st., 1864, Nev. was admitted into the Union as the 36th State. Pop. in 1860, 6,857; in 1870, 42,491; in 1880, 62,266 (of whom 42,019 male; and 20,267 female); 36,613 natives and 25,653 foreign 53,556 whites 488 colored, 14 Chinese, and 63 taxied Indians). The number of tribal Indians in 1882, according to the report of the U.S. com. of Indian affairs, as 7,831.

Nevada, Ark., a S.W. co., bounded N. by Little Missouri R. and drained by Cypress bayou, and Terre Rouge Creek; area, 625 sq. m. The surface is rolling and well timbered. The soil is fertile. The chief prod. in 1880 were 10,520 bales of cotton, and 233,223 bush. of corn. Cap., Prescott. Val. of taxable prop. abt. \$3,000,000. Pop. 12,959 (of whom 3,732 colored).

Nevada, Cal., a N.E. co., bordering on Nevada, and drained by Middle and South Yuba R.s.; area, 1,026 sq. m.; pop. in 1870, 19,134 (of whom 1,627 were Chinese). The surface is generally mountainous, especially toward the east, which is traversed by the Sierra Nevada range. One half of the area is estimated to be occupied by mineral lands. Gold mining is the principal industry, and agriculture receives little attention, though there is much arable land, and timber is abundant. The co. contains several of the richest and most productive quartz lodes in the State, and the placer diggings are not surpassed by any other. Cap., Nevada City. Val. of taxable prop. abt. \$11,000,000. Pop. 20,827 (of whom 8,475 for., 3,004 Chinese, and 101 Indians).

A.&C.R.R., 100 m. S. of Indianapolis. It is finely situated, with wide streets, at right angles, upon two benches or plains that sweep N. by a gentle rise from the river. To the W. and N.W. is a range of hills from 300 to 500 ft. in height, called the Knobs. The chief public buildings are the court-house, a fine city hall, the opera-house, capable of accommodating 2,500; the masonic and odd fellow's hall, 3 large hotels, the railroad depot, and 10 large public school buildings. The fair grounds in the N.E. suburb comprise 72 acres, and contain a race course and appropriate buildings. There are 4 cemeteries in the vicinity of the city, one of them national. A steam ferry plies between the city and the W. end of Louisville. The Ohio R., within a distance of 2 m. above New Albany, has a fall of 29 ft., affording the finest water-power in the W. The river trade amounts to abt. \$20,000,000 a year. A large wholesale business is carried on. Manufacturing is the most important interest of the city, embracing cottons, woollens, glass, machinery, and iron, brass and wood work of all kinds. The works of the Star glass company are the most extensive glass works in the U. States, and the only one producing polished plate glass. There are 2 large pork-raising establishments, 4 nat. and 1 other bank, 1 daily and wkly, 1 monthly, and 1 semi-monthly papers, 30 churches, an excellent fire department, a street railroad, graded public schools, including high schools for both sexes, the De Pauve female college (Methodist), organized in 1846, a pub-

Newark, *N.J.*, a city ♦, port of entry, and cap. of Essex co., is situated on the W. side of the Passaic R., 4 m. from its entrance into Newark Bay, and 9 m. W. of the city of New York. It stands on a fertile plain, with a rising ground on the W. Newark has ample means of communication with New York, Philadelphia, and the surrounding country, trains running every few minutes through the day to New York, with which it is connected by 4 different railroads. This is the most populous and flourishing place in the State of New Jersey. The city is divided

into 15 wards; it is for the most part regularly laid out, with broad and straight streets, generally crossing each other at right angles. Many of the streets are bordered by lofty and beautiful shade trees, which give an air of elegance. The main street, called Broad street, is very spacious and handsome. 132 ft. wide and $2\frac{1}{2}$ m. long, shaded with majestic elms, adorned with numerous tasteful edifices, and skirting in its course Washington, Military, and South parks, which are embowered with lofty elms. There are abt. 140 m. of improved streets, of which nearly 100 m. are graded, and more than 30 m. paved. The city is supplied with water collected from a large number of springs on the neighboring high grounds into a reservoir, and thence distributed by pipes. It has a system of sewerage, abt. 30 m. of sewers having been completed. There are four cemeteries within the limits of the city: Woodland, Fairmount, Mt. Pleasant, and the Catholic cemetery. Mt. Pleasant, the oldest, occupies 40 acres of ground on the Passaic R., and is elegantly laid out in winding avenues thickly shaded by ornamental trees and flowering shrubbery. Besides the churches, the most noteworthy buildings are the custom house, city hall, and several of the banks and insurance buildings. The city has 104 churches, 9 horse railways, 11 banks of deposit, 5 savings banks, 3 trust companies, 5 daily and wkly and 4 monthly papers, 15 fire insurance companies, 4 life insurance companies, a paid fire department, and an electric fire alarm telegraph. Its municipal government consists of a mayor, common council (one-half of which are elected annually), an educational board, water and tax commissioners, and an excise board. There are a number of handsome and costly public buildings. Newark is very extensively engaged in manufactures, a great part of the products of which are sent to distant markets. Although there are no peculiar natural facilities here for this kind of industry, this want has been abundantly supplied by steam power and other artificial agents, under the direction of human skill and enterprise. About the year 1676, measures were taken to invite mechanics to this place. The first shoemaker appears to have been induced to come into the settlement from Elizabethtown, having been "formerly admitted a member of the community, on condition of his supplying it with shoes." The manufacture of shoes, boots, sadlery, harness, and the various fabrics of leather, have constituted an extensive branch of the business of Newark in modern times. The tanneries here have been very extensive, the first of which was established as long ago as 1698. Other manufactures, in great variety and abundance, have been produced, the most important of which are jewelry, celluloid goods, saddlery and harness materials, felt and silk hats, carriages, varnish, ale and lager beer, trunks and valises, chemicals, cotton thread, clothing, agricultural implements, fertilizers, machinery, and sewing silk. The smelting and refining of gold, silver, and lead ores is also a prominent interest. The Newark Industrial Institute is an organization of mechanics and manufacturers, which has for its object the encouragement and advancement of manufactures and the mechanical arts. Newark also has a board of trade. Its shipping interests are quite extensive; it has a line of docks over a mile in length. The city has quite a number of charitable institutions; its system of public schools is excellent, embracing a high school, 12 grammar schools, 20 primary schools, 2 primary industrial schools, 7 evening schools, and a Saturday normal school. The number of school buildings owned by the city is 21. Newark academy, incorporated in 1795, is one of the oldest institutions in the State. There are several well attended Catholic schools. There are two libraries, that of the Newark library association, containing 20,000 volumes and that of the New Jersey

historical society, containing 6,000 volumes and 10,000 pamphlets, besides manuscripts of great value and rarity, and a cabinet of curiosities and relics. Newark was settled in 1666 by a company from Connecticut. Pop. in 1830, 10,950; in 1860, 71,914; in 1870, 105,131; in 1880, 136,508.

New Bedford, Mass., city ✦, port of entry, and one of the caps. of Bristol co., 50 m. S. by E. from Boston by O.C.R.R., on the W. side of Acushnet R., whose mouth forms here a commodious harbor and is crossed by a bridge 4,000 ft. long. There is a strong fortification at the entrance of the harbor; and around Clark's point, at the S. end of the city, is a fine public drive $\frac{1}{2}$ m. long. New Bedford is connected with New York by a daily line of steamboats. The city water works were constructed in 1869, at a cost of nearly \$1,000,000. From the head of Acushnet R. which is dammed up to form a reservoir with a capacity of 400,000,000 gallons, the water is brought 6 m. and is pumped for distributing to a height of 100 ft. The city has 24 public schools, a Friends' academy, 27 religious societies, a domestic missionary society, St. Joseph's Hospital, an orphan asylum, a free public library of 30,000 vols., a paid fire department with steam fire-engines, an electric fire-alarm telegraph, and 1 street railway. Its industries include a cotton mill, print cloth works, an iron foundry, copper-sheating works, gas, cordage, twist drills, Prussian blue, paraffine candles, 4 oil and candle works, 5 shoe-factories, 2 manuf. photographic establishments, glass-works, 1 tannery, 2 flour mills, 3 paint works, &c. There are 4 nat. and 2 savings banks, 1 fire and 1 marine insurance company, 2 daily and 1 wkly and 3 monthly papers. New Bedford has long been the chief seat of the American whale fishery, which was pursued here as early as 1755. The business chiefly flourished from 1808 till 1854, which last year was the culminating point of its prosperity. The destruction of 30 whalers by confederate cruisers during the civil war, the wrecking of 24 at one time in the N. Pacific in 1871, and the substitution of other articles for the prod. of the fishery, proved disastrous, and it is rapidly on the decline. In 1880 the vessels engaged in it in the U. States numbered 185 of which 144 of 35,208 tons belonged to New Bedford. Pop. in 1870, 21,320; in 1880, 26,876.

New Hampshire, one of the New England States, bounded N. by Canada, E. by Maine and the Atlantic Ocean, S. by Massachusetts and W. by Vermont. It lies between lat. 42° 40' and 45° 18' N., and lon. 70° 40' and 72° 35' W. Length from N. to S. abt. 180 m., extreme breadth 93 m.; area, 9,305 sq. m. The shore of the 18 m. of sea-coast in the S.E. part, is, in most places, a sandy beach, bordered with salt marshes, penetrated by creeks and coves, furnishing harbors for small craft, and affording but one harbor for ships, which is that of Portsmouth, at the mouth of Piscataqua R. For the distance of 20 or 30 m. back from the sea, the country is level, occasionally diversified with hills and valleys. Beyond this the hills increase in number, and in many parts of the State rise into lofty mountains, particularly in the N., where are situated the White Mts., which are among the highest in the U. States, E. of the Rocky Mts., and others along the heights between Merrimaek and Connecticut Rs. In different parts are some picturesque lakes and fine water-falls, and the beauty and grandeur of the scenery presented by its mountains and lakes has caused it to be denominated "the Switzerland of America." The principal mountain peaks are Grand Monadnock, toward the S.W. part of the State; Sunapee Mt., near Sunapee Lake; Kearsarge Mt., between Sutton and Salisbury; Carr's Mt. in Ellsworth; Mooshillock in Benton, and Mount Washington, the highest peak of the White Mts., has an average elevation of 1,400 ft. above the sea. One-sixth of the whole area is covered with water. Almost upon the Canada line, elevated 2,551 ft. above sea level, and surrounded by a dense forest of evergreens, is the lake which is the source of the Connecticut R. After flowing through two other smaller ponds and receiving several little tributaries, the stream passes into the Connecticut Lake, which is 4 m. long, 2½ m. wide and 1,619 ft. above the sea. Lake Magalloway, the source of the river of the same name, covers 320 acres and is elevated 2,225 ft. Lake Umbagog (1,256 feet high) extends over into Maine. Lake Winnipiseogee is 25 m. long, 8½ m. wide and contains 274 islands. A little N.W. of this is Squam Lake, 5 m. in length and 4 in breadth. Other considerable bodies of water are Sunapee and Ossipee Lakes. Perched 5,000 ft. above the sea is the Lake of the Clouds, the source of the Ammonoosuc R. The State is divided into five hydro-

graphic districts—viz., the Connecticut, Merrimaek, Piscataqua, Saco and Androscoggin. The Connecticut basin is 185 m. long, from 5 to 30 wide and covers an area of 3,060 sq. m. in N.H. For 211 m., this river constitutes the W. boundary of the State. Its principal tributaries are the Upper and Lower Ammonoosuc, Sugar, Cold and Ashuelot Rs., all of them originating on the W. side of the "Heights of Land." The basin of the Merrimaek is 98 m. long, from 15 to 60 m. wide and comprises 3,825 sq. m. The Pemigewasset and the Winnipiseogee unite to form the Merrimaek. The Piscataqua basin of 825 sq. m., is 45 m. in length and from 10 to 20 m. in width. This river is made up of the Cochecho and the Salmon Falls, which come together at Dover. The basin of the Saco is 46 m. long by 18 wide, and contains 850 sq. m. The Androscoggin basin is 71 m. long, from 10 to 30 m. wide, and covers an area of 825 sq. m. All of the above streams are subject to sudden floods; they are abundantly stocked with fish. Off the coast are the Isles of Shoals, 8 in number, of which 3 are under the jurisdiction of N.H., and 5 belong to Maine. Their total area is only abt. 600 acres. A dense growth of trees originally extended over most of the State. Clearing land was the first work of the early settlers. Coos co. is still covered with an almost unbroken primeval forest. Two-thirds of the Connecticut and one-third of the Piscataqua basins are still in timber land. The hills and mountains are covered with a growth of pine, oak, walnut, cedar, hemlock, fir, beech, maple, balsam, poplar, butternut, &c.; white oak and chestnut flourish on the hard, stony tracts, and spruce and hemlock on the thin, cold soils. There is a very marked difference between the vegetation of the N. and S. parts. More than 1,000 species of plants have been noted. Forest trees grow on the White Mts. below the line of 3,000 ft. and in sheltered localities up to 4,000 ft. Above that the plants common to Greenland and Labrador are found. The bear, wolf, moose and other wild animals are occasionally seen.—The climate is severe, being somewhat colder than that of Maine, but more steady. In summer the heat sometimes rises to 100° and in winter the cold has been known to freeze the mercury in the thermometer. In the neighborhood of the White Mts., the winters are excessively cold, and the peaks are covered more or less with snow eight months in the year, from which circumstance their name has been derived. The Merrimaek valley below Concord is the warmest part of the State; and the abundant waterfalls here have caused the growth of the manuf. towns of Manchester, Nashua, Suncook, and Hooksett. All parts of N.H. are exceedingly healthful, and cases of remarkable longevity are very numerous. The cold weather begins about the last of Oct., and continues till May; and from the latter part of Nov. till the opening of spring the whole country is usually covered with snow, and the rivers are frozen.—The soil of N.H. is generally fertile, particularly on the margins of the rivers, and especially on Connecticut R., and the hills have a moist and warm soil, particularly adapted to grazing. Pork, beef, mutton, poultry, butter and cheese are annually exported. Apples, pears, plums, and cherries are produced in abundance. Sugar is extensively made from the hard maple tree. The principal prod. for the census year 1880 were 1,401,820 bush. of corn, 158,200 of wheat, 891,840 of oats, 102,156 of buckwheat, 3,786,300 of potatoes, and 592,764 tons of hay, 1,263,711 lbs. of wool, 6,246,813 of butter, and 1,740,389 of maple sugar. There were on farms 57,100 horses, 98,100 milch cows, 123,725 oxen and other cattle, 246,942 sheep, and 45,450 hogs.—The State surveys disclose the existence of mineral deposits in various sections, but they have not been developed to any great extent. A valuable bed of iron ore has been worked in Lisbon and re-

duced at Franconia, and gold-bearing quartz, said to assay from \$18 to \$25 per ton, is mined in the same neighborhood. By far the most important and profitable article which the earth yields is granite. It exists in inexhaustible quantities, is quarried and dressed, notably in Concord and in many other places, is of fine grain and ready cleavage, and adapted to the highest architectural purposes. Some of the best buildings in the country are constructed from it. It also serves some admirable purposes in sculpture, its beautiful grey being preferable to marble. Under improved processes of manufacture it takes a brilliant polish, and is widely used for monuments and mural designs. Next in importance may be named the Franconian soapstone, a valuable deposit entering extensively into the useful arts, which is worked on a liberal scale. It is made ready for market at Nashua, and from thence supplies the demands at Boston and New York. Mica is another article of commercial value found in Grafton, Acworth and Alexandria.—In 1880, according to the census of that year, N.H. had 3,181 manuf. establishments, employing 38,831 hands; capital invested, \$51,112,263; wages paid during the year, \$14,814,793, value of materials \$43,552,462; value of products, \$73,978,028. The leading industry is the making of textile fabrics, among which were 36 cotton-mills, working 24,299 looms and 944,053 spindles, and employing 16,529 hands; cotton consumed during the year 157,673 bales; capital invested, \$19,877,084; wages paid, \$4,290,960; value of materials, \$10,146,904; value of products, \$17,923,403. The next largest interest is the paper manuf. The shipping and direct imports of N.H. are given under PORTSMOUTH, its only port of entry. The greater portion of the foreign products consumed in the State is entered in Boston. N.H. had in 1882, 1,026 m. of railroad in operation.—A compulsory education law has been in force since 1871. All children between the ages of 8 and 14 years are required to attend school for at least 6 weeks in every year. In 1882, the State was divided into 2,227 school districts; value of school houses, \$2,303,248; pupils attending school, 33,069; teachers, 3,594; total expenditures, \$575,808. Town and cities may do away with the district system and provide high schools for more advanced culture. Many have so done. There is a normal school at Plymouth supported by the State. Teachers trained there are required to pursue their calling within the State. Besides the free schools, there are abt. 50 academies and seminaries, mostly incorporated, where tuition is paid. Four or more of these are designed for female students, and many of them are established on liberal foundations. There is one college, Dartmouth, at Hanover, chartered in 1754, being the fourth in point of time established in New England. Connected with it are other institutions which afford the student an opportunity to complete the circle of a university education. These are the Chandler scientific department, including French and German; the agricultural school, established from the congressional land grant; the Thayer school of civil engineering, and the medical department. Within a little more than the last decade a million of dollars has been added by gift or bequest to its funds. The State penitentiary and the N.H. asylum for the insane are at Concord. A reform school for boys and girls has been in successful operation at Manchester since 1855, and receives abt. 150 pupils annually. The blind are supported at the Perkins institute in Boston, and the deaf and dumb at the American asylum at Hartford.—The legislature, styled the general court, consists of a senate of 12 members, and a house of representatives of a varying number of members. The governor is advised in his executive duties by a council of 5 members. The members of the legislature, governor and councillors are elected annually

on the 2d Thursday in March. The judicial power is vested in a superior court of judicature consisting of 3 justices, a circuit court, probate and police courts, and justice of the peace. N.H. sends 2 representatives to congress and has 4 electoral votes. In 1881, the aggregate value of taxable prop. was \$168,964,903. The State debt amounted to \$3,372,770. The receipts into the treasury aggregated \$503,114; expenditures, \$461,101.—The State is divided into 10 counties: Belknap, Carroll, Cheshire, Coös, Grafton, Hillsborough, Merrimack, Korkingham, Strafford, and Sullivan. The cities and principal towns are: Claremont, Concord (the cap.), Dover, Exeter, Farmington, Franklin, Gilford, Hanover, Haverhill, Keene, Laconia, Lancaster, Lebanon, Littleton, Manchester, Milford, Nashua, Newport, Pembroke, Petersborough, Portsmouth, Rochester, Somersworth, Weare, and Winchester.—A settlement was begun near the mouth of the Piscataqua in 1623, by a party of Englishmen, who came to fish and to trade. Dover was settled the same year. From 1680 to 1775, the seat of government was at Portsmouth. N. H. bore a conspicuous and honorable part in the struggle for independence. On June 21st, 1788, the constitution of the U. States was ratified, and in 1792, the State constitution was adopted. Pop. in 1790, 141,885; in 1830, 269,328; in 1860, 326,073; in 1870, 318,300; in 1880, 346,991 (of whom 170,526 males and 176,465 females, 300,697 natives, and 46,294 of foreign birth; 346,229 whites, 685 colored, 14 Chinese, and 63 taxed Indians).

New Haven, Conn., a S. co., on Long Island Sound, bounded W. by Housatonic R. and drained by the Naugatuck, Quinepiack, and other streams; area, 640 sq. m. The surface is generally uneven, mountainous in the middle and toward the E., and the soil is moderately fertile. On the coast there are several excellent harbors. The chief prod. in 1880 were 13,549 bush. of buckwheat, 232,379 of corn, 76,164 of oats, 78,256 of rye, 215,195 lbs. of tobacco; potatoes and butter, are largely produced. The co. has very extensive manuf. interests. Cap., New Haven. Val. of taxable prop. abt. \$200,000,000. Pop. 156,526 (of whom 37,308 for., and 3,562 colored).

—the largest city of the State, port of entry, and cap. of the above co., at the head of a harbor or bay which sets up 4 m. from Long Island Sound, and on the B. & N.Y.A.L., the N.H.&N., the N.Y., N.H.&H., the N.H.&D., and the Shore Line R.Rs. It is situated on a large and level plain, surrounded by hills and mountains, except at the S. in the direction of the harbor. The harbor is formed by the confluence of three rivers, Quinnipiac and Mill R. on the E., and West R. on the W. The most striking objects which arrest the attention in approaching the city from the S. are the East and West Rocks, two reddish, bold, perpendicular precipices of rude, naked trap rock, the former 370, and the latter 400 ft. in height. The streets are well paved, drained, and lighted with gas. The number of magnificent elms with which the principal streets and squares are planted has caused New Haven to be called the City of Elms. Chapel street, the principal thoroughfare, extends in a W.N.W. direction from end to end of the city. The principal public buildings are the custom house and post-office, the State house, the city hall, and the court-house. New Haven is the seat of Yale college, one of the oldest and most important educational institutions in America. It was founded in 1700, and in 1881 had 106 instructors and 1,037 students. Besides its academic department, the college has a law school, a medical school, a scientific school, a theological school, and a school of the fine arts. The grounds include 9 acres, and contain many buildings. The most noteworthy are the Gothic library, with 90,000 volumes; the elaborate art building, containing a fine collection of paintings, statuary, and casts, and a number of studios; the Alumni hall, used for the annual examinations and graduates' meetings; the new dormitories, Durfee hall, and Farnam hall, with the elegant Battell chapel; the two handsome buildings of the divinity school, with the dainty little Marquand chapel between; the Sheffield hall, and North Sheffield hall, containing the laboratories and collections of the Sheffield scientific school, the Peabody museum, in which are the collections of the university in geology, mineralogy, and the natural sciences,

including the famous collection of Prof. Marsh; and the gymnasium, said to be the most complete in the country.—The harbor of New Haven is protected from winds, but is rather shallow. To remedy its defects, two wharfs have been constructed, 3,500 and 1,500 ft. long, and there are other landings for steamboats. There is daily communication with New York by steamboats. The port has a large coasting trade, and the commercial foreign commerce is also considerable, particularly with the West Indies, but it is not fully exhibited by the U. States commercial reports, most of the business of New Haven merchants being done through New York. The direct exports for the year 1882 were valued at \$598,487; imports \$956,055; entrances in the foreign trade, 86 of 19,628 tons; clearances, 42, of 7,545 tons. In 1882 there were, belonging to the port, 139 sailing vessels of 7,969 tons, 36 steam vessels of 15,912 tons, and 10 barges of 2,033 tons. The manuf. are very extensive, including machinery, hardware, locks, clocks, fire-arms, carriages, pianos, jewelry, India rubber goods, &c. The city has abt. 55 churches, and 25 public schools. The Hopkins grammar school is chiefly designed for preparing boys for Yale college. There are also a collegiate institute, and numerous private schools. New Haven has 7 nat. and 3 State banks, 6 daily, 12 weekly and 12 monthly papers and periodicals are published here. The principal theatres are the grand opera house (2,000 seats), Loomis' (1,000 seats), New Haven opera house (1,000 seats), Carl's opera house, (2,500 seats), and the Athenæum (600 seats). The city is divided into 10 wards. It is governed by a mayor, 20 aldermen and 30 councilmen, elected for 1 year. The police force consists of abt. 100 men, and there is an efficient fire department. The New Haven burying ground, containing 18 acres at the N.W. of the city, is beautifully laid out. The European country, on West R., is large and tastefully adorned, and near it is a Catholic burying ground. The village of Fair Haven, 2 m. E. of the city hall, is within the limits of the city, and is situated on both sides of the Quinnipiac. Its leading business is the oyster trade, large quantities being brought here from various places, and laid down in beds, giving employment to quite a number of vessels. The city is divided into 10 wards, and is governed by a mayor and a board of aldermen of 2, and a council of 3 members for each ward. There are efficient fire and police departments. The streets are well paved, drained, and lighted with gas. New Haven was the principal settlement in the colony, originally independent, which was founded by Theophilus Eaton, and his associates, in 1638. The independence of this colony continued until the charter of Connecticut, procured from Charles II., in 1662, included the New Haven colonists under the same jurisdiction. Under this charter Hartford and New Haven were made joint capitals, the legislature meeting alternately at each place, until in 1873, by an amendment of the constitution, Hartford was made the sole seat of government. New Jersey, one of the Middle Atlantic States, bounded N. by New York, E. by New York and the Atlantic Ocean, S. by the Atlantic Ocean and Delaware Bay, and W. by the Delaware Bay and River, separating it from the States of Delaware and Pennsylvania. It lies between lat. 38° 56' and 41° 21' N., lon. 73° 54' and 75° 33' W. The extreme length from Cape May to the N. angle, is 167 1/2 m., and the greatest breadth 59 m. At the narrowest point between Bordentown and South Amboy, the State is abt. 32 m. in width; area, 7,815 m. (or 7,455 exclusive of water surface). N.J. has a direct coast line of 120 m. Its S. portion is almost entirely alluvial. A strip of marsh-girts the seashore, with broad tracts of salt meadow. Next to this is an immense sandy plain, seldom rising to a height of 60 feet above the sea level, until it reaches the Neversink or Nevisink Highlands opposite Sandy Hook, which have an elevation of 375 feet. Above Trenton the country is more rolling and based upon the old red sandstone formation. The N.W. section is rugged and mountainous. A range of hills, beginning at Bergen Point, skirts the Hudson R. as the Palisades and passes over into New York. Twenty miles W. of the Palisades there is another nearly parallel range

of hills. Along the N.W. boundary are the Blue Mts., through which the Delaware R. breaks at the Water Gap, the sides of which are 1,600 feet high. At High Point, near the New York line, is the most elevated land in the State, having a height of 1,800 feet. N.J. as it is seen, is characterized topographically by three well marked divisions. Its N. part is mountainous, its middle is rolling, and its S. part is uniform in surface. These features of its surface have given character to the State, and directed its development and industries. The middle division early attracted farmers to its soil, and it has always been well farmed. Its rolling surface, and its streams of water have furnished water power, so that it has become the seat of mixed industries, and the development of agricultural, mechanical and manuf. industries have gone on together greatly to the benefit of each. The N. part of the State includes between its mountain ranges many valleys, the soil of which is very fertile, and their lands are in a high state of cultivation. The iron mining manuf. industries are large, and these various pursuits engage the attention of a large population. The S. part of the State is low, and its surface is gently rolling. The soil is generally light and sandy, but susceptible of improvement, and responds quickly to the beneficial action of fertilizers. There are more than half a million acres of tillable land still covered by wood. Some of the more sandy belts are too poor for profitable farming. They are covered by a light growth of Jersey pine. The soils of the more S. cos. are especially adapted to market gardening.—The Hudson R., runs for 28 m. along the E. border, receiving scarcely a tributary from N.J. on account of the Palisades, and the Delaware R. constitutes the whole of the W. boundary. The three principal rivers within the State are the Hackensack, navigable for 15 m. which joins the Passaic at the head of Newark Bay; the Passaic, which has a fall of 72 feet at Paterson; and the Raritan, emptying into the bay of the same name, which is navigable to New Brunswick, 17 m. There are several lakes in the N. part, of which the best known is Greenwood Lake, on the N.Y. boundary, 16 m. in circumference. Newark Bay is 15 m. long and 2 m. broad. Staten Island Sound separates Staten Island from the main land. From Sandy Hook to Cape May is a long line of sandy beaches, interrupted by salt water marshes and numerous inlets and bays. Barnegat Bay, 40 m. long, and Great and Little Egg Harbors afford a safe anchorage for small vessels, but there are no good harbors. A large number of summer resorts has sprung up along the coast. From Sandy Hook to Cape May are Port Monmouth, Highlands, Sea Bright, Island Heights, Long Branch, Deal Beach, Asbury Park, Ocean Grove, Ocean Beach, Spring Lake, Sea Girt, Squan, Point Pleasant, Squan Beach, Lavallette City, Seaside Park, Island Beach, Long Beach, Beach Haven, Brigantine Beach, Atlantic City, Absecom Beach, Peck's Beach, Learning's Beach, Five-Mile Beach, Seaville, Ocean View, and Cape May. The largest of these seaside resorts are Long Branch, Asbury Park, Atlantic City and Cape May.—The sandy plains of the south were originally covered with a growth of pine and shrub oak. In the hilly district the principal trees are the oak, walnut, beech, birch, ash, elm, sugar-maple, pine, cedar, hemlock, etc.—The climate varies much in different parts of the State. In the N. where the country is more elevated, it is much colder than toward the south, where the influence of the ocean and a low situation is felt. The annual mean temperature of the S. end of the State is between 53° and 54° that of the N. end from 48° to 50°. The annual rainfall is about 44 inches. Fevers and ague prevail in the neighborhood of the marshes, but upon the seashore and in the hilly regions the climate is remarkably healthy.—The staple products of agriculture vary somewhat in the several natural divisions of the

State. In the rich limestone valleys, as also on the cultivated hills of the N. part, and on the rolling red sandstone plain in the central portion of the State, Indian corn, wheat, rye, oats, and hay are the crops, which are grown largely and with profit. The dairy products are large in Sussex co. and elsewhere in the vicinity of large towns and near railway lines. On the marl belt of the more S. part of the State the same staple crops are produced, together with a very large proportion of Irish potatoes, and in some localities sweet potatoes also. Vegetables of all kinds and small fruits are raised extensively near the towns and large cities. Orchard fruits are cultivated in all parts of the State, and are noted for their excellence. The attention of agriculturists is turning more and more to market gardening, as the profits are large on suitable soils and where proper skill is employed. The Bureau of Labor and Statistics (report of 1880) recommends the encouragement of silk culture by the State. It appears that N.J. already manufactures \$16,000,000 of the \$30,000,000 produced in the U. States, and consumes more than 60 per cent. of the raw silk imported into the U. States.—The State is rich in mineral deposits. In the highlands of the N. part magnetic iron ore is widely distributed. Many large veins are known and worked. The principal mines are in Morris, Sussex, Passaic and Warren cos., although some ore is raised in Bergen and Hunterdon cos. The development of the iron industry has been steady and rapid, and the product has increased from about 10,000 tons in 1790 to 754,872 tons of ore mined in 1880. The several lines of railroads which traverse this mining district give easy communication, and its location between the anthracite coal mines of Pennsylvania and the great Atlantic coast markets favor its development. There are 17 blast furnaces in the State, which consume annually a large part of the mine production. These natural advantages and improved methods of smelting ores such as are found in the State, must stimulate the production, and also the business of iron making. There are in Sussex co. two very large zinc ore deposits. The annual product of ore has ranged from 15,000 to 22,000 tons for a number of years. In the central part of the State there is a belt of plastic clays of a superior character crossing from the Raritan Bay to the Delaware R. It is most extensively opened in the vicinity of Woodbridge and Perth Amboy, in Middlesex co. The aggregate amount of such clays dug annually is 250,000 tons, worth at least \$1,000,000. In addition to the mineral deposits or ores, there are in the State beds of roofing slate, which are worked at several localities in Sussex and Warren cos.; inexhaustible supplies of limestone, suitable for making excellent lime for use in agriculture and in mechanic arts; building stone in great variety, and greensand marl, the well known natural fertilizer of S. Jersey.—The manuf. interests are varied and large. In 1880, according to the census of that year, N.J. had 7,128 manuf. establishments, employing 126,036 hands; capital invested, \$106,226,593; wages paid during the year, \$46,083,045; value of materials, \$165,285,779; value of products, \$254,380,236. Newark is the third city in the Union in the value of its manuf. products. The silk mills of Paterson, the iron works in the cos. of Morris, Sussex and Warren, the steel, zinc and black lead works of Jersey City, and the potteries of Trenton, are all noted for the extent of their production and the excellence of their work.—N.J. is divided into 6 customs districts, of which the ports of entry are Newark, Perth Amboy, Tuckerton, Great Egg Harbor, Bridgeton, and Lambertton; but the foreign trade passes almost entirely through New York and Philadelphia. The Morris canal extends from Jersey City to Phillipsburg, 101 m. The Delaware and the Raritan canal connects Trenton on the Delaware with New Brunswick on the Raritan, 43 m., and has a feeder

23 m. long from Bull's Island to Trenton. The State had, in 1882, 1,753 m. of railroad in operation.—A compulsory education law was passed in 1873. In 1880 there were 1,558 school buildings, 203,568 pupils enrolled in the public schools; and 3,332 teachers; whole expenditures for public schools, \$1,889,475; valuation of all public school property, \$6,401,603. A large and flourishing normal school is located at Trenton. There are 4 colleges in the State, and numerous academies and seminaries.—N.J. is divided into 21 cos., viz.: Atlantic, Bergen, Burlington, Camden, Cape May, Cumberland, Essex, Gloucester, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Salem, Somerset, Sussex, Union, and Warren. Trenton is the cap. The other cities are Bridgeton, Burlington, Camden, Elizabeth, Harrison, Hoboken, Jersey City, Millville, Newark, New Brunswick, Orange, Paterson, Plainfield, Rahway, and Salem.—The present constitution was adopted in Aug. 1844. The general election is held annually on the 1st Tuesday after the first Monday in Nov. The legislature consists of a senate of 21 members elected for 3 years, and an assembly of 60 members elected annually. Members are paid \$3 per day. A salary of \$5,000 per annum is paid to the governor, who continues in office for 3 days. The chancellor, who presides over the court of errors and appeals, is elected for a term of 7 years, and receives a salary of \$5,500, besides fees. The State sends 7 representatives to congress, and has 9 electoral votes. In 1881 the State debt amounted to \$1,896,300. The receipts into the Treasury were \$878,747; expenditures, \$1,006,203. The total val. of taxable prop. was \$527,451,222.—The earliest colony of N.J. was probably planted at Bergen between 1617 and 1620, by the Dutch, who maintained possession until finally ousted by the English in 1664. In 1674 the Dutch recaptured New York and New Jersey. This triumph was, however, but of short duration, and the whole region the same year reverted to the English. The last governor for the English crown was Wm. Franklin, the natural son of Benj. Franklin. The province adopted a State constitution in 1776, under which the State was governed until 1844, when its present constitution was adopted, and throughout the revolutionary war it was frequently the scene of stirring events. On its soil were fought the battles of Trenton, Princeton, Millstone, Red Bank, and Monmouth. Federal constitution was adopted by an unanimous vote, 18th Dec., 1787. Pop. in 1790, 184,139; in 1830, 320,823; in 1860, 672,035; in 1870, 906,096; in 1880, 1,131,116 (of whom 559,922 males and 517,194 females; 909,416 natives and 221,700 of foreign birth; 1,092,017 whites, 38,853 colored, 172 Chinese and 74 Indians).

New London, Conn., a S. E. co., on Long Island Sound, bordering on R. I., bounded E. partly by the Pawcatuck and W. by the Connecticut R.s., and drained by Thames R.; area, 650 sq. m. The surface is hilly and in the S. W. mountainous; the soil is best adapted to grazing. Fishing is extensively carried on. The chief prod. in 1880 were 12,201 bush. of buckwheat, 244,943 of corn, 146,321 of oats, 15,587 of rye, and 29,622 lbs. of tobacco; also potatoes and butter. The manuf. interests are various and important. Caps., New London and Norwich. Val. of taxable prop. abt. \$90,000,000. Pop. 73,137 (of whom 14,172 for., and 1,591 colored).

—a city, port of entry, and one of the caps. of above co., on the W. bank of the Thames R., 3 m. above its entrance into Long Island Sound, on the C. V. the N. Y., N. H. & H., and the N. Y., P. & B. R.R.s., 40 m. S. E. Hartford. There are 2 lines of steamers to New York. The city is built on a declivity sloping S. and E., and the ground in the rear of the city rises to a considerable height. It has several handsome public buildings, and the private residences, owing partly to the influx of summer visitors who are attracted by the beautiful scenery of the neighborhood, are in many cases elegant and picturesque. The harbor is the best on Long Island Sound, and one of the best in the U. States. It is 3 m. long and 5 fathoms deep. sheltered by hills, seldom obstructed by ice, and defended by Fort Trumbull at the entrance. The inhabitants of New London have long been actively engaged in the whale fishery, in which the city ranks second only to New Bedford. Recently the seal fishery has been pursued by vessels from this port at Alaska and the South Shetland Islands. The cod and mackerel fisheries for the New York and other markets are also important. There is some foreign and considerable coasting trades. The value of imports for the year 1880 were \$175,526; of exports \$39,572. The number of vessels belonging to the port was 168 sailing vessels, tonnage 7,769, and 36 steamers, tonnage 13,148. The city has 11 churches, graded public schools, including 2 high schools, a public library, a daily and wkly paper, 4 nat. and 1 other bank, several iron foundries, machine shops, planing mills, a woolen and silk factory, a large cracker bakery, &c. New Mexico, a S.W. territory, bounded N. by Colorado, E. by the Indian Territory and Texas, S. by Texas and Mexico, and W. by Arizona. It is situated between lat. 31° 20' and 37° N., and lon. 103° and 109° W. The greatest length from N. to S. is 395 m., the greatest breadth 355 m., and the area, 122,580 sq. m. The surface is marked with mesa, valley, and mountains, foot hills, bluffs, gorges, cañons, and mountain parks. The mountain ranges from N. to S. generally break into isolated ranges, spurs, and foot hills, diminishing somewhat in altitude, and gradually becoming mesas or high table-lands. In the N. part of the territory the Sangre de Cristo range looms up with spurs and ranges, to the E. as the Raton Mts., to the S. the Taos, Mora, and Santa Fé Mts., to the W. the Conejos and Tierra Amarilla ranges. S.E. of the old city of Santa Fé and E. of the Rio Grande a long line of ranges runs S. as the Placer Mts., the Sandia, Manzana, Oscura, Jumanes, Fra Cristobal, Caballo, San Andres, and Orange ranges. To the E. of the above a long series of high table-lands, reaching to the mesa, known as the Llano Estacado or Staked Plains, extend to the S. border of the Territory. On the W. side of the Rio Grande, from the isolated peak known as San Antonio Mtn., ranges run south as follows: Petaca Valles, Jemes, San Mateo, Ladrones, Oso Madalenas Socorros, Gallinas, Pueblo, Southern San Mateo, also including the extensive Miembres Mtn. ranges, and the Florida Mts., near the S. border. Farther to the west and near the Arizona line appears the continental divide, composed of several ranges. These different ranges, distributed as they are, furnish a large water supply, a great amount of timber, and are excellent shelter for stock during storms. The mesas and table-lands in the N. part of N. Mex. are generally abt. 6,000 to 6,500 ft. above sea level. In the central

portion of the Territory the mesas attain an elevation of abt. 5,000 ft., and in the S. of abt. 4,000 ft. The ranges generally rise from 2,000 to 5,000 ft. above the mesas and high table-lands. Mt. Baldy, 18 m. from Santa Fé, is 12,202 ft. high, and Mt. Taylor, in the Sierra San Mateo, 11,200 ft. (The Rio Grande del Norte, or Rio Bravo del Norte (the wild river of the North), is the main river of N. Mex. It rises in S.W. Colorado, at an elevation of 11,920 ft., and runs southerly and centrally through the territory through cañons and cotton lands. The E. portion of the territory is drained by the Canadian R. (Rio Colorado) emptying into the Arkansas R., and the N.W. part by the Rio San Juan. The Puerco of the West, Zemu, Tularosa, and San Francisco, are in the Central West. The Rio Miembres and Rio Gila are in the extreme S.W. of the territory.—The mineral wealth of N. Mex. is subject to constant discovery. Gold, silver, copper, iron and lead abound, and there have been recent discoveries of precious stones, notably of turquoises, very valuable. Thirty miles S. of Santa Fé are rich placers which are worked at great profit, the ore existing in quartz easily crushed. Near the Placer Mts. the whole soil seems impregnated with gold. The yield of gold for the year 1881 was \$185,000; silver, \$275,000. The Salt lakes are numerous between the Rio Grande and Pecos, and coal crops out in many places. Mineral springs and warm springs are found in different parts of the territory, possessing medicinal virtue. The climate varies much. Near Santa Fé and in the mountains the winter is severe. N. of Santa Fé the days are never sultry and the nights are always cool. In the south the temperature is mild, being seldom below the freezing point, and rarely rising to extreme heat, owing to the elevation of the surface. The sky is generally clear and the atmosphere dry, so that meat may be preserved for a long time without salt. In the south the rainy season is in July and August. The annual rainfall varies from 10 to 30 inches in different localities. The mean temperature at Santa Fé (lat. 35° 41', elevation 6,862 ft.) for six years has been as follows: spring, 49.7°; summer, 70.4°; autumn, 50.6°; winter, 31.6°; year, 50.6°. —Notwithstanding the value of gold, silver, and copper mining, stock-raising is the most profitable source of income, the country being better adapted to this industry than the cultivation of the soil. Immense flocks of sheep are raised, as well as great numbers of heaves and mules. Portions of the high plains, valleys and hills are covered with grass sufficient for pasturing millions of animals. According to a careful estimate made by L. A. Sheldon, governor of N. Mex., the yield of wool, in 1880, amounted to 10,500,000 lbs. produced by 5,000,000 sheep; being an average of abt. 2 lbs. to the head. The amount of land susceptible of profitable cultivation is difficult to estimate. The soil is universally good and only requires water to make the production equal to those of the best lands in the country. A very large portion of the cultivable lands may be irrigated at a small cost, and undoubtedly will be when pop. becomes more dense and necessity imposes greater demands. The present methods of cultivation are primeval and do not properly indicate the productiveness of the soil.—W. G. Ritch, territorial secretary, writes under a recent date: "Our mines are rapidly coming to the front and have the special advantage of an equable climate and easy transportation all the year around. Three railroads are now within our borders, and the Texas Pacific still 'coming.' The recent opening of a continuous line of railway to the Pacific via the Atchison, Topeka and Santa Fé and the Southern Pacific RRs., places N. Mex. upon a great national highway. The N. terminus of one of the contemplated lines to the city of Mexico is at El Paso del Norte, upon the N. boundary of Mexico, immediately adjacent to the S. bor-

der of N.Mex. The completion of the road to the capital of the Mexican republic cannot fail to inure greatly to the benefit of N.Mex. Other lines are building into and through the Territory, which within a few years will make every section of it conveniently accessible to travel and trade. A special advantage of N.Mex. is its adaption to horticulture and cultivation of the vine. It is equal if not superior to California. The person who comes early and establishes an orchard in variety and quality will possess a bonanza superior to a gold mine." Says Governor Lewis Wallace in his last message to the legislature: "What with our advantages of climate, broad pastures, our mountains teeming with minerals, you may go confidently forward preparing for a population as rich, prosperous and enterprising as any in the world."—In 1880, according to the U. States census, the assessed val. of taxable prop. were \$6,689,694 (real estate, \$2,706,478; personal prop., \$3,983,216). This is estimated to be abt. 50 per cent. of the true valuation, which is, approximately, \$13,379,388. The State tax was \$40,894; county tax, \$59,071. N.Mex. was visited by the Spaniards as early as 1537. Humboldt thought that N.Mex. was the first abiding place of the Aztecs, as they migrated southward, and remarkable ruins testify to the advancement in civilization of the early inhabitants. The country was ceded to the U. States by Mexico in 1848, and a territorial government was organized Sept. 9, 1850.—The territory is divided into 12 cos., viz.: Bernalillo, Colfax, Dona Ana, Grant, Lincoln, Mora, Rio Arriba, San Miguel, Santa Fé, Socorro, Taos, Valencia. The cap. is Santa Fé. Pop. in 1850, 61,547; in 1860, 93,515; in 1870, 91,874 (decrease due to the setting off of territory to form Arizona and a part of Colorado); in 1880, 119,565 (of whom 64,496 male and 55,069 female; 111,515 native and 8,051 of foreign birth; 108,721 white, 998 colored, 56 Chinese, and 9,790 Indians and half breeds). The number of tribal Indians (not included in the census) in the territory in 1882, according to the report of the commissioner of Indian affairs, was 28,527.

New Orleans, La., a city.

New Orleans (Fr. La Nouvelle Orléans), La., the chief city and commercial metropolis of the State, port of entry, and the 10th city of the U. States in point of population, is situated in lat. 29° 57' 30" N., lon. 90° S' W., on the left side of the Mississippi R. (except the annexed town of Algiers which is on the right bank), 115 m. above its mouth, 953 m. below the mouth of the Ohio, and 1,149 m. below the mouth of the Missouri, 1,195 m. S.W. of Washington by the great Southern Mail, and 690 m. S. of St. Louis by the C., St. L. & N. O. R.R. It embraces nearly the whole of Orleans parish, with parts of Jefferson and Plaquemines, reaching on the N. and E. to Lakes Ponchartrain and Borgne. The older portion of the city is built within a great bend of the river, from which circumstance it derives its familiar name of the "Crescent City." In the progress of its growth up stream, it has now so extended itself as to follow long curves in opposite directions, so that the river-front on the left bank presents an outline somewhat resembling the letter S. The statutory limits of the city embrace an area of nearly 150 sq. m., but the actual city covers an area of abt. 41 sq. m. It is built on an inclined plan, descending gently from the river towards the swamp in the rear; so that when the Mississippi is full, the streets are 3 or 4 ft. below the surface of the river. To prevent inundation an artificial embankment called the Levee has been raised at a great expense. This Levee is 15 ft. wide and 14 ft. high, and is constructed for a great distance along the river bank. Directly in front of the city it affords a very pleasant walk. The view of the city from the river, in ascending or descending, is beautiful, and on entering it, the stranger finds it difficult to believe that he has arrived at an American city. This remark applies especially to the central and lower parts, where the older buildings are ancient and of foreign construction, where the manners, customs and language are so various; the population being very nearly equally made up of Americans, French, Creoles and Spaniards, with a mixture of almost every nation on the globe. During the months of July, August, Sept. and Oct., the population is much reduced through fear of the yellow fever, which appeared for the first time in New Orleans, in 1769,

or, according to Dr. Bennet Dowler, in 1796. It is, nevertheless, remarkable that this fever, of which the natives and older residents have been to a great extent exempted, even in the most fatal seasons, is not now so permanently dangerous as it was in the first half of this century, and is even for years without making its appearance. Apart from yellow fever, New Orleans is not surpassed in healthfulness by any large city. Among the public buildings and monuments the most noticeable are the cathedral of St. Louis, and, fronting Jackson square, the custom house, commenced in 1848 and not yet finished; the branch mint of the U. States, the new cotton exchange, built in 1882-3; the bronze equestrian statue of Jackson, by Clark Mills, in Jackson square, and the colossal bronze statue of Henry Clay, by Hart, in Canal street. By its width, the splendor of its buildings, and the elegance and good taste of its stores, Canal street, which is the line of separation between the two parts of the town popularly called the *French* and the *American*, may advantageously compete with any other street of the Northern States. There are in New Orleans about 60 churches or places of public worship. The benevolent institutions are numerous, the more remarkable being the charity hospital, which accommodates abt. 500 patients, and is attended by the sisters of charity; the asylums for old men and widows, belonging to the ladies of Providence; Stowe's hospital; the Franklin infirmary; the U. States naval hospital, &c. There are abt. 17 cemeteries in and around the city, in which the usual mode of sepulture is above ground, the soil being so moist and marshy that interment beneath is objectionable. Many of these tombs are costly and elegant structures. Besides the public schools, which make great progress, there are numerous private schools, two flourishing medical colleges, a Roman Catholic ecclesiastical seminary, a college under the Jesuits, a convent and academy of Ursuline nuns, a convent of Redemptorists, free schools directed by members of several religious orders, &c. There were in 1882, 27 daily, weekly, and monthly papers; 7 nat. and 4 State banks. The principal theatres are the French opera house, the academy of music, the St. Charles theatre, and the Grant opera house. The city is well provided with water, and its fire department is admirably organized. New Orleans is the grand emporium of all the vast regions traversed by the Mississippi and its tributary streams, and enjoys, in consequence, a greater command of internal navigation than any other city either of the new or old world. Dense populations are still to be found in comparatively small portions only of the immense territories of which this city is the entrepôt; and yet her progress, up to the outbreak of the Civil War, has been rapid beyond all precedent. The war, however, proved in the highest degree disastrous to the interests of New Orleans, by momentarily annihilating the cotton trade, and checking the commerce and industry of the Southern States. Within the last few years, however, notwithstanding the competition of the eastern railroads, and chiefly owing to the improvements made at the mouth of the Mississippi which allow vessels of the largest size to ascend the river up to the city, commerce has greatly revived, and business found its old channel. New Orleans is the terminus of the C., St. L. & N. O., the M's. L. & T., and the N. O. & T. RRs. There are lines of steamers running to the Northern ports, to the West Indies, South America, and Europe. New Orleans ranks next to New York in the value of its exports and 4th for its entire foreign commerce, several ports surpassing it in the value of imports. The value of imports for 1882 was \$12,255,496; of exports, \$70,701,927, in which cotton entered for 1,227,963 bales or \$63,609,828. The number of entrances in the foreign trade for that year was 619 of 620,072 tons; clear-

ances 640 of 661,498 tons; belonging to the port, 452 vessels of 24,265 tons and 51 steamers of 28,631 tons. New Orleans is emphatically the great cotton market of the world. The cotton crop for 1881 reached 6,589,329 bales, of which 1,586,000 were received here. In the same year 273,000,000 lbs. of sugar were raised in La., of which 174,644 hogshead and 47,435 barrels reached this port, together with 272,962 barrels of molasses. The receipts of rice were 48,185,000 lbs.; of tobacco, 11,584 hogsheads. Owing to the new system of barges used for transportation on the Mississippi, the grain trade is rapidly growing. The quantities received in 1881 were 9,137,373 bush. of corn and 6,523,747 of wheat. The total value of the principal articles of produce received from the interior during the same year was \$197,758,175. The manuf. interests of the city are now making marked progress. New Orleans is divided into 7 districts; it is governed by a mayor and 7 administrators elected by the people for 2 years. In 1882 the total city debt was \$16,872,220; the assessment of taxable property was \$103,177,149; and the total tax reached 31½ mills.—The site of New Orleans was surveyed in 1717 by De la Tour; it was settled in 1723, held by the French till 1729, then by the Spanish till 1801, and by the French again till 1803, when, with the province of La., it was ceded to the U. States. It was incorporated as a city in 1804. The most memorable events in its history are the battle of Jan. 8, 1815, in which the British were defeated by Andrew Jackson, and the capture of the city by Admiral Farragut on April 24, 1862. Pop. in 1810, 17,243; in 1860, 168,675; in 1870, 191,418; in 1880, 216,140.

It has an undulating surface and a generally fertile soil and contains large quantities of coal. The chief prod. in 1880 were 12,249 bush. of barley, 107,048 of corn, and 78,098 of oats; also butter. Cap., Newport. Val. of taxable prop. \$40,000,000. P. 24,180. —city, port of entry, cap. of above co., and one of the caps. of the State, situated near the head of Narragansett Bay, 25 m. S.S.E. Providence, and 68 m. S. of Boston by O. C. RR. Daily steamers from New York to Fall R., Mass., touch here. Newport has a fine harbor, which may be entered at all times without a pilot, and is safe, commodious, and deep enough for the largest ships. It is defended by Fort Adams on Brenton's Point. The city is on a declivity facing the harbor, and contains a State house, custom house, city hall, the Redwood library with 20,000 volumes, the People's library (free) with 15,000 volumes, the masonic hall, armory hall, and numerous elegant private residences. Its salubrious climate, refreshing ocean breezes, facilities for sea bathing, and charming natural scenery have rendered it one of the most popular summer resorts in the U. States, and the visitors during the fashionable season are numbered by thousands. The whole S. portion of the island is now dotted over with villas, and there are several large hotels. The older part of the city is interesting for its quaint and picturesque appearance. The commerce of Newport is now very limited, and its manuf. are almost confined to a few cotton mills, a brass foundry, and lead works. In 1880 there were 152 vessels of 6,027 tons in aggregate belonging to the port. The city has 1 endorsed high and several public and private schools, 5 nat. and 4 other banks, 1 daily and 2 wkly papers, and a paid fire department. The society of Friends have had their annual meetings here for abt. 250 years. The U. States torpedo station is located on an island in Newport harbor. Newport was settled in 1638, and was soon noted for the enterprise, activity, opulence and refinement of its inhabitants. During the revolution 8,000 British and Hessian troops, who were quartered in the town, destroyed 480 houses, burned the shipping, cut down all the groves for fuel, &c., and the commercial interests of Newport have never recovered from the injury which they inflicted. Pop. 15,693.

New York, "the Empire State," is bounded N.W. and N. by Lake Erie, Lake Ontario, the St. Lawrence R. and the Province of Quebec, E. by Lake Champlain, Vermont, Massachusetts, Connecticut, and the Atlantic Ocean, S. and S.W. by the Atlantic Ocean, New Jersey and Pennsylvania. It is situated between lat. 40° 30' and 45° N., lon. 71° 51' and 79° 45' W. The extreme length from E. to W. is 412 m., and the width from N. to S. 311 m. The State has a water boundary of 880 m. (of which the ocean constitutes 250 m., the rivers 280 and the lakes 350), and a land boundary of 540 m.; area, 49,170 (or, water surface excluded, 47,620 sq. m.). The surface of the State is much diversified. Long Island is flat and sandy. On both sides of the Hudson R. are the Highlands, some summits of which reach an elevation of 1,700 ft. North of these are the Catskill Mts., situated chiefly in Greene co., of which Round Top and High Peak, abt. 3,800 ft. in height, are the most conspicuous peaks. Beyond the water-shed which turns the drainage toward the N., the country is rolling and diversified. Extending over a considerable part of the four N.E. cos., Clinton, Franklin, Hamilton, and Essex, is the "Adirondack wilderness," which, after the White Mts. of N.H., contain the most lofty summits of the N. spur of the Appalachian range, Mt. Mary being 5,402 ft. and Mt. McIntyre 5,106 ft. above sea level. The principal rivers are the Hudson, Delaware, Susquehanna, Mohawk, Oswego, Genesee, Niagara, Alleghany, and St. Lawrence. Besides the frontier Lakes Ontario and Erie, N.Y. has many lakes of considerable size, among the principal of which are Lakes Champlain, George, Otsego, Oneida, Skaneateles, Cayuga, Seneca, Crooked, Canandaigua, Chautauqua and Cattaraugus. The principal islands are Manhattan, Long Island, and Staten Island.—There is a wide range of temperature and there are great variations in the climate. The mean temperature of the State, as determined from observations made at 58 meteorological stations, for periods ranging from 1 to 25 years, is 46.9°. The mean length of the season of vegetation, from the first blooming of apples to the first killing frost, is 174 days, while on Long Island it is 12½ days longer, and in St. Lawrence co., 22 days shorter. The mean annual fall of rain and snow is abt. 40.93 inches. Notwithstanding the mountainous and broken character of much of its surface, the greater part of the soil of N.Y. is arable, and some of it very fertile. Most of the mountainous districts are fine grazing lands, and yield the best milk, butter and cheese. The plains and valleys are adapted to the culture of cereals, and the N. and

N. W. counties to root-crops. The forest trees of the State present a great variety, and a few years ago nearly one-half its area was covered with forests, but the great demand for timber, lumber, and hemlock and oak bark, for building ships, houses, railroads, and for tanning purposes, has much reduced the forest area. N. Y. occupies a foremost place in agriculture. Its principal prod. for the census year 1880 were 7,792,062 bush. of barley, 4,461,200 of buckwheat, 25,875,480 of corn, 37,575,506 of oats, 2,634,690 of rye, 11,587,766 of wheat, 32,571,900 of potatoes, 6,572,800 lbs. of tobacco, 700,550 tons of hay, and 11,206,730 lbs. of wool. There were on farms 610,358 horses (besides abt. 350,000 not in farms), 5,072 mules, 39,633 working oxen, 1,437,855 milch cows, 862,233 other cattle, 1,715,180 sheep, and 751,907 hogs.—Among the minerals of economic value the most important is iron. Galena, or lead ore, is found in St. Lawrence and other cos. in large quantities. Salt springs, from which a vast amount of salt is made, occur along the line of the Onondago salt group, especially in Onondago co., the product of which, in 1880, was 8,748,203 bls., valued at \$1,106,740. The State abounds in building material; its granite, white and colored marbles, sandstones, and gray and blue limestones, as well as its excellent clay and sand for brick, furnish a sufficiency of material for its dwellings. In 1880, there were 78 iron mines, employing 4,675 hands, produced 1,239,759 tons of ore, valued at \$3,419,133. The State has numerous mineral springs of high repute—the most famous of which are those at Saratoga, Balston, New Lebanon, Avon and Sharon. Petroleum is obtained in Alleghany co. In Chautauqua, Dutchess, Oneida, and Monroe cos. are illuminating gas-springs.—According to the census of 1880, almost one-fifth of the capital invested in manuf. in the U. States was employed in N. Y., and abt. a quarter of the entire products of the country was the result of N. Y. industry. The State had in the census year 42,739 manuf. establishments, employing 364,549 men, 137,455 females above 15 years, and 29,529 children and youth; capital invested, \$514,246,575; wages paid during the year, \$198,634,029; value of materials, \$679,612,545; value of products, \$1,080,696,596. The leading industries are agricultural implements, book-binding, boots and shoes, carriages, clothing, cotton goods, flouring, furniture, iron works of every description, leather, liquors (malt), lumber, molasses, and sugar (refined), printing and publishing, tobacco and cigars, and woolen goods.—N. Y. is divided, for commercial purposes, into 10 customs districts, viz.: Buffalo Creek, Cape Vincent, Champlain (port of entry Plattsburg), Dunkirk, Genesee (Rochester), New York, Niagara (Suspension Bridge), Owegoatchie (Ogdensburg), Oswego and Sag Harbor. The total number of merchant vessels belonging to the State was 4,273 of 962,220 tons.—In 1881 the total number of miles of railroads in the State was 9,186, of which 477 m. were horse-railways. This includes the elevated railroads in the city of New York. The steam surface-roads have cost \$695,525,828, the horse-railways \$40,686,946, and the elevated roads \$33,038,332, a total of \$770,251,107.24. The steam surface-roads carried 47,197,385 passengers during the year, the horse-roads 244,900,717, and the elevated roads 60,831,757. The steam surface-roads also carried 57,356,128 tons of freight. Their aggregate earnings were \$108,965,556.04, operating expenses \$64,996,989.54, leaving as net earnings \$43,968,566.50, or 64 per cent. on the cost. The earnings of horse-railroads amounted to \$13,449,121; cost of operating, \$9,157,457; net earnings, \$4,291,664, or 10½ per cent. of cost. Earnings of elevated roads, \$4,612,975; expense of operating, \$2,644,525; surplus, \$1,968,650, or abt. 6 per cent. on the cost. The aggregate of stock and debts was \$905,507,218 for steam and \$42,990,204

for horse-roads, but of the former only \$662,871,488 represents roads within the limits of the State.—N. Y. has 14 State canals, whose total length is 857 m. The most important is the Erie Canal (355 m.), which connects Lake Erie with the Hudson R., and affords a continuous water channel through which the produce of the Western States and Canada may reach the port of New York. The tonnage of transportation for the year 1880 was 6,462,290; tolls, \$1,155,257.—Free schools are established for all between the ages of 5 and 21 years. In 1881, the number of persons of school age was 1,662,813, of which 1,021,282 were attending school; number of school houses, 11,894; number of teachers, 30,826; estimated value of school houses and sites, 31,091,630; total expenditures for school purposes, \$10,808,802. Each city, for convenience, has an independent school government, district schools being maintained in the several wards, and the whole completed by a high school, where the academic standard is well maintained. Private schools are quite numerous in the cities, and there are many academies throughout the State providing secondary instruction. The city of New York has a normal school for the instruction of teachers under its separate control, and there are 8 normal schools in different portions of the State under the joint management of the superintendent of public instruction and local boards. The university system of the State for the supervision of higher and secondary instruction is, in some respects, peculiar to New York. Regents of the university are elected by the legislature. The university does not exist, but the regents are active and influential. The colleges of the State, while independent of the regents in the absolute sense, are, nevertheless, largely under their influence. Institutions of learning, devoted to special scientific education, exist in various sections, so that the entire field is fully covered.—A general board of charities has general supervision over the public institutions, with the exception of prisons. N. Y. has 3 State prisons at Auburn, Clinton, and Sing Sing. Their average number of inmates in 1881, was 9,981. There are 6 county penitentiaries at New York, Brooklyn, Albany, Syracuse, Rochester and Buffalo. For the blind there are State institutions at Batavia and New York City. In the latter city also is the school for the instruction of the deaf and dumb. The Elmira reformatory had 493 inmates in 1880. The house of refuge for boys, on Randall's Island will contain 1,000, and the Western institution, at Rochester 600. There is also a new house of refuge for women at Hudson. Asylums for the insane have been opened at Utica, Poughkeepsie, Buffalo, Middletown, and Binghamton, and there are besides several incorporated and private asylums. The number of inmates in all the State and private asylums is constantly increasing and had reached 10,059 in 1881.—N. Y. is divided into 60 cos., viz.: Albany, Alleghany, Broome, Cattaraugus, Cayuga, Chautauqua, Chemung, Chenango, Clinton, Columbia, Cortland, Delaware, Dutchess, Erie, Essex, Franklin, Fulton, Genesee, Greene, Hamilton, Herkimer, Jefferson, Kings, Lewis, Livingston, Madison, Monroe, Montgomery, New York, Niagara, Oneida, Onondaga, Ontario, Orange, Orleans, Oswego, Otsego, Putnam, Queens, Rensselaer, Richmond, Rockland, Saratoga, Schenectady, Schoharie, Schuyler, Seneca, Steuben, St. Lawrence, Suffolk, Sullivan, Tioga, Tompkins, Ulster, Warren, Washington, Wayne, Westchester, Wyoming, Yates. The cap. of the State is Albany.—The constitution adopted in 1846, as several times amended, is still in force. The legislature, which meets on the 1st Tuesday in January, consists of a senate of 32 members elected for 2 years, and an assembly of 128 members elected for 1 year. Executive officers are elected for 2 years, with the exception of the governor and lieutenant-governor, who serve for 3 years. The highest

judicial tribunal of the State is the court of appeals, which consists of a chief and six associate judges. There are 33 justices of the supreme court, 4 in each of the 8 judicial districts, except the first, comprising the city and co. of New York, in which the number is 5. The supreme court has general original jurisdiction. Every co. has its co. court, surrogate court, and several justices of the peace. The judges of the various courts are elected by the people, those of the court of appeals and supreme court for 14, of co. courts for 6, and justices of the peace for 4 years. The State sends 34 representatives to congress, and has 36 electoral votes. In 1881 the State funded debt was \$9,114,054. The receipts into the treasury amounted to \$14,940,403; expenditures, \$12,856,760. The assessed value of property was \$2,681,257,606, of which \$2,340,335,590 was real estate, and \$340,921,916 personal property.—John De Verrazano, a Florentine in command of a French vessel, landed upon the soil of N. Y. in 1524. Henry Hudson sailed up the river which now bears his name in 1609. A trading post and fort were built near Albany in 1614. In Aug. 1664, the Dutch dominions were surrendered to the English. N. Y. is one of the original 13 States; framed a constitution in 1777, and ratified the U. States constitution July 26, 1788. Pop. in 1790, 340,120; in 1830, 1,918,608; in 1860, 3,880,735; in 1870, 4,382,759; in 1880, 5,082,871 (of whom 2,505,322 males and 2,577,549 females; 3,871,492 natives, and 1,211,379 of foreign birth; 5,016,022 whites, 65,104 colored, 926 Chinese, and 819 Indians).

—the principal city of the above State, the commercial metropolis of the U. States, the most popular city of the Western hemisphere, the third in the civilized world, and second only to London in commercial importance. It lies at the mouth of the Hudson R., at its confluence with a narrow strait called East R., which falls into Long Island Sound, 18 m. from the Atlantic Ocean, 143 m. S. of Albany, 90 m. N.E. of Philadelphia, 205 m. N.E. Washington, 234 m. S.W. Boston, 715 m. E. of Chicago, and 1,370 m. N.E. of New Orleans. The city occupies the entire surface of Manhattan Island; several islands in the East R., and in the Bay; and a portion of the mainland N. of Manhattan Island and separated from it by Harlem R. and Spuyten Duyvel Creek. The extreme length N. from the battery is 16 m.; greatest width from the Hudson to the mouth of Bronx R., $4\frac{1}{2}$ m.; area, nearly $41\frac{1}{2}$ sq. m., or 26,500 acres, of which 12,100 acres are on the mainland. Manhattan Island, on which the city proper stands, is $13\frac{1}{2}$ m. long, and varies in breadth from a few hundred yards to $2\frac{1}{2}$ m., having an area of nearly 22 sq. m. The older portion of the city below 14th St. is somewhat irregularly laid out. The plan of the upper part includes avenues running N. to the boundary of the island, and streets running across them at right angles from river to river. The city is compactly built to Central Park, abt. 5 m. from the Battery, and on the E. side for the most part to Harlem, $3\frac{1}{2}$ m. farther. Distances are calculated from the City Hall, which is in lat $40^{\circ} 42' 40''$ N., lon. $74^{\circ} 1' 8''$ W. A rocky ridge runs through the centre of the city, rising at Washington Heights 238 ft. above sea-level. The city is connected with the mainland of N. Y. by bridges across the Harlem R., with Long Island by a magnificent suspension bridge across the East R., and with New Jersey, Long Island, and Staten Island by 26 steam ferries. Ten railroads radiate from the city, while the finest passenger steamboats in the world pass up the Hudson, Long Island Sound, and down the narrows, through the lower bay. A tunnel under the Hudson R. is in process of construction by a company with \$10,000,000 capital, which is intended to furnish the means of extending the railways which now terminate on the New Jersey side of the river to the heart of the city of N. Y. The harbor is spacious and safe,

the inner harbor extending 8 m. from the Narrows to the city, and several miles farther up both the North and East Rs., but particularly the latter. It is abt. 25 m. in circumference, and the largest vessels come to its wharves. Besides this, it has an outer harbor, extending from the Narrows to Sandy Hook, consisting of Karitan bay. Sandy Hook, on which is a light house, is 18 m. from the city; and at this point, there are 27 ft. of water on the bar at high tide, and 21 ft. at low tide. Within Sandy Hook, there is a good anchorage. The harbor is entered not only from the ocean at Sandy Hook and through the Narrows, but on the N.E. from Long Island Sound, and on the S.W. through the Kills and Staten Island Sound. Several islands within the inner harbor are attached to the city, which are Governor's, Bedloe's (the proposed site of the colossal statue of Liberty which France is to present to N. Y.), and Ellis islands, on all of which are strong fortifications; and Blackwell's, Great Barn, and Randall's islands, in the East R. After passing the bar at Sandy Hook, the channel to the city has a depth of water of from 35 to 50 ft. The average tide at the wharves is from 6 to 7 ft. Steamboats are constantly employed in towing vessels to and from the ocean. The safest and best portion of the harbor, and where the vessels chiefly lie, is along East R., where there is rarely any obstruction from ice. The tide sweeping through this part with a strong and rapid current. The excellence of its harbor, and other great natural advantages, have contributed to make N. Y. the second commercial city on the globe.—The city co-extensive with the co. of same name, is built of brick, brown sandstone, and white marble, and is now rivaling in splendor any of the European capitals. It is impossible to even enumerate here all the public and business buildings which should command description, among which are the city hall, court-house, post-office, St. Patrick's cathedral, Trinity church, Grace church, academy of music, Cooper institute, Drexel, Western Union, Park bank, Herald, Tribune, Temple court, Masonic temple, academy of design, Grand Central dépôt, young men's christian association, and the numerous great hotels, several of which have accommodations for more than a thousand persons. There are abt. 500 churches of all denominations. The public school system comprises 113 primary schools and departments and 104 grammar schools, besides 5 grammar and primary schools for colored children; a normal college for girls, 1 nautical school, and the college of the city of New York. In 1880 there were 264,163 children attending public schools, and the teachers numbered 3,288. Besides, there are 35 Roman Catholic schools, and colleges and academies of the religious orders. Columbia college is one of the oldest in the country; the university of the city of New York has been more recently established. Each has departments of law and medicine, and there are two other medical colleges, several theological seminaries, and many private academies. The hospitals and institutions of charity and benevolence are on a liberal scale, and too numerous for notice here. Among them are asylums for insane, blind, deaf and dumb, magdalens, foundlings, &c. The Astor, mercantile, society, apprentices', historical society, eclectic, law institute, Cooper union, young men's christian association, Lenox, and other libraries not connected with institutions of learning, have in aggregate abt. 600,000 volumes. There were in 1882, 543 newspapers and periodicals published in N. Y., of which 23 were daily. The academy of music, the house of Italian opera, has seats for 4,700 persons, and there are about 25 other theatres giving nightly entertainments. The Central Park, laid out in the best style of landscape-gardening, is one of the largest and finest in the world, embracing a rectangular area, of 843 acres. A large

portion of it is occupied by the two Croton reservoirs, besides which the lakes, 5 in number, occupy 43½ acres. Fourteen other small public parks and squares are scattered over the city. The Croton aqueduct brings a river of pure soft water 40 m. which is reserved in reservoirs of a capacity of 9,500,000 gallons, and distributed through abt. 400 m. of pipes with such a head as to supply public fountains of 60 and 80 feet jets, and the upper stories of most buildings. This supply has become scarcely sufficient for the actual population, and works are to be soon undertaken as to obtain a large increase of supply at an estimated cost of \$25,000,000. The city government is composed of a mayor, boards of aldermen and councilmen, and bureaux of various departments. The police force consists of 3,000 men, with salaries of \$1,000 to \$8,000 a year. The commissioners of charity and correction have direction of asylums, hospitals, and prisons. Commissioners of emigration receive and attend to the wants of emigrants. A paid fire department exists, with 43 steam fire engines, 2 chemical engines, 19 hook and ladder trucks, and 850 men, costing abt. \$1,300,000 annually.—In 1880 the valuation of real estate was \$1,049,340,336, personal property, \$197,532,075; total valuation, \$1,246,872,411; bonded debt, \$136,406,733; floating debt, \$6,039,966; total indebtedness, \$142,446,700; share of State tax, \$2,368,906; city tax, \$20,935,926; total taxation, exclusive of school, \$23,304,832; school tax, \$1,382,155.—N.Y. has 25 m. of water-front available for docks. There are abt. 70 piers on the East R. and 80 on the Hudson R. The control of the water-front is vested in 3 commissioners of docks. N.Y. has direct communication with the principal coastwise and transatlantic ports by numerous lines of steamers. Besides the Hudson R. and other local boats, there are more than 20 lines to various ports on the Atlantic and gulf coasts, owning 75 steamers, with an aggregate of 75,000 tons. To the West Indies and South America six lines despatch 25 steamers with an aggregate tonnage of 75,600. These include the Pacific Mail line, running *via* the Isthmus of Panama to San Francisco, and a line to Rio de Janeiro. There are 12 lines of ocean steamers to British ports, with 105 ships of 310,460 tons, and 7 lines to continental ports, with 69 ships of 205,614 tons.—N.Y. is the great centre of American finance and commerce. More than half the commerce of the U. States is carried on through the customs district of which it is the port, and abt. two-thirds of the duties are here collected, the whole amount for the year 1882 being \$216,138,916, of which \$140,334,077 was collected in the N.Y. district. This district besides the city, embraces the greater part of Long Island, including Brooklyn; Staten Island; the New Jersey shore N. of Staten Island, including Jersey City; and the shores of Hudson R. The value of imports at the port of N.Y. for the year 1882 was \$521,275,897; domestic exports, \$370,497,741; of foreign exports, \$16,162,827. Total value of imports and exports, \$837,564,666, which represents 56.78 per cent. of the entire commerce of the country. During that year 1,806 American vessels of 1,075,682 tons, and 4,719 foreign vessels of 6,285,161 tons entered; and 1,374 American vessels of 892,739 tons, and 4,806 foreign vessels of 6,370,435 tons, cleared in the foreign trade. The number of vessels belonging to the district in 1882 was 4,002, with an aggregate tonnage of 945,646, viz.: 2,444 sailing vessels of 518,693 tons, 954 steamers of 325,427 tons, 172 canal-boats of 16,988 tons, and 432 barges of 88,538 tons. The number of vessels built in the district in 1882 was 158, with an aggregate tonnage of 19,729.—The domestic trade of N.Y. is immense, by far exceeding the foreign, but on this only partial, and not always reliable, information is obtainable. It is carried on by means of the numerous lines of railroads, the Hudson R., the Erie Canal, and the coasting steamers. The

demand of the whole country for foreign goods and most of the products of domestic manuf. is, to a great extent, supplied by the N.Y. importers, jobbers, and commission merchants. There are several powerful organizations of business men to develop and regulate the foreign and domestic trade of the port, foremost among which are the chamber of commerce whose beneficial influence is felt far beyond the limits of the city, the board of trade and transportation, the produce exchange, the cotton exchange, etc.—The manuf. of N.Y. are only inferior to its mercantile interests; they are of considerable importance and very varied (see New York State).—The city had 162 banks and banking houses in 1882 (national 48, State 24, savings 24, private 66). A clearing-house was organized in 1853 to facilitate the transaction of business and the settlement of accounts between its members. Its transactions during the year 1882 were exchange, \$46,552,846,161; balances, \$1,595,000,245.—N.Y. was first settled by a Dutch colony in 1614. At the end of that year the future metropolis consisted of 4 houses and a small fort on the site of the present Bowling Green, and was known as New Amsterdam. In 1644 (pop. 1,000) it was surrendered to the British, and passing into the hands of the Duke of York, was thenceforward called New York. In 1696 Trinity church was founded. Pop. in 1700, 6,000; in 1800, 60,489; in 1820, 123,706; in 1850, 515,847; in 1860, 812,869; in 1870, 942,377; in 1880, 1,206,590.

Nez Perces, [the "pierced noses," a name of uncertain origin, for they are not known to have pierced their noses], properly SAHAPITSS, a tribe of Indians of Northern Idaho, belonging to what is called the Sahapitin stock, remarkable for certain grammatical peculiarities in their languages. They occupy a reservation of 1,344,000 acres, to which they were removed from Ore. and Wash. T., and which is said to contain the best land in that section. They are generally friendly to the whites, but there are several hundred who are discontented and refuse any favors from white men. The "treaty" Nez Perces, number abt. 2,800, and have somewhat progressed.

Nez Perces, *Idaho*, a N. co., bounded N. by Clearwater R., E. by Montana, S. by Salmon R., and W. by Ore. and Wash. T., from which last it is separated by Snake R.; area, 7,350 sq. m. It is watered by tributaries of the Clearwater and Salmon Rs. The surface is generally rugged and mountainous. The valley of Clearwater contains extensive arable lands, and Camas prairie in the N.W. corner is very fertile. Gold is mined to some extent. The chief prod. in 1880 were 123,897 bush. of oats, and 148,422 of wheat. Cap., Lewiston. Val. of taxable prop. abt. \$500,000. Pop. 3,965 (of whom 782 for., and 281 Indians).

Niagara [Indian "thunder of water"], N.Y., a celebrated river, forming the boundary between the State of New York and the province of Ontario, Canada, and connecting Lake Erie with Lake Ontario, is 36 m. long, and has a total fall of 333 ft. It is navigable in its upper course from its issue from Lake Erie to the commencement of the rapids at Niagara Falls, a distance of 16 m. during which its fall is only 20 ft.; and in its lower course from Lew-

iston to Lake Ontario, a distance of abt. 8 m. during which its fall is only 2 ft. Along its middle course, which contains the celebrated *Niagara Falls* and is crossed by two suspension bridges, on the Canadian side is the Welland Canal, through which the navigation interrupted by the rapids and falls of the middle course of the river is carried on. On issuing from Lake Erie the river is $\frac{3}{4}$ m. broad; but as it flows on it becomes several miles wide, making room for a number of islands, the largest of which, Grand Island, is 12 m. long, and from 2 to 7 broad, which reaches within $1\frac{1}{2}$ m. of the falls, the river is contracted to a breadth of $2\frac{1}{2}$ m. and grows narrower as it proceeds, and before it makes the great leap it descends 52 ft. over a series of rapids. At the edge of the cataract the width of the river is abt. 4,750 ft., but the edge itself does not form one straight line. First, it is broken by Goat Island, which, abt. 1,000 ft. wide and 2,000 ft. long, rises 40 ft. above the water and extends out to the very brink, thus dividing the fall into two. Next, it forms between Goat Island and the Canadian shore a large curve, bent inward, which, resembling a horse-shoe, gives this part of the fall the name of the Horse-shoe Fall. The height of the cataract is 164 ft. on the American side of Goat Island and 150 on the Canadian. From the foot of the fall to Lewiston, a distance of 7 miles after which it enters a level region, the river descends 104 ft. running through a deep and narrow gorge, whose width varies from 200 to 400 ft. and whose sides rise almost perpendicularly, so that access to the river can be had only by stairways. About one-eighth of a mile below the falls a suspension bridge is thrown across the river, 190 ft. above the water, 1,190 ft. from cliff to cliff and 1,268 ft. from tower to tower; it was finished in 1869, and presents a magnificent view of the falls. In 1855 another suspension bridge was constructed across the river abt. 2 miles below the falls, 245 ft. above the water and 821 ft. from tower to tower. Among the great cataracts of the globe, that of Niagara stands preëminent for the enormous volume of water that is carried over so high a precipice. There are many cataracts which descend from greater heights, but the sublimity of Niagara is in the vast power displayed by a mighty current descending down the long rapids, and finally plunging in one unbroken sheet into the deep abyss below. In the deep chasm below the fall, the current, contracted in width to less than 1,000 ft. is tossed tumultuously about, and forms great whirlpools and eddies as it is borne along its rapidly descending bed. The gorge through which the river flows below the falls, bears evidence of having been excavated by the river itself. In the short period, hardly reaching back into the last century, during which observations other than those of passing travelers have been made and preserved, changes have taken place by the falling down of masses of rock, the effect of which has been to cause a slight recession of the cataract, and extend the gorge to the same amount upward toward Lake Erie. Thus in 1818 great fragments descended at the American fall, in 1823 at the Horse-shoe fall, and since 1855 several others, which have materially changed the aspect of the falls.

—a W. co., bounded N. by Lake Ontario, S. by Tonawanda Creek, and W. by Niagara R.; area, 500 sq. m. The surface is undulating except on the border of the lake, where it is low and level. The soil is productive and highly cultivated. The chief prod. in 1880 were 495,541 bush. of barley, 12,653 of buckwheat, 833,226 of corn, 751,549 of oats, and 866,531 of wheat; wool, potatoes, and butter, are also largely produced. Cap., Lockport. Val. of taxable prop. \$20,140,500. Pop. 54,174 (of whom 12,842 for., and 416 colored).

—tp. in above co., extending above and below the falls. It contains 2 incorporated villages, Niagara Falls, at the falls, and Suspension Bridge, formerly

Niagara City, abt. a mile below. Their prosperity depends largely upon the great numbers of tourists that resort to the falls.—NIAGARA FALLS, p. o. ♀, on N. Y., L. E. & W. and N. Y. C. —a city♦, port of entry, and the cap. of above co., on Elizabeth R., opposite Portsmouth, 32 m. from the sea, 8 m. from Hampton Roads, and 81 m. E. of Petersburg by N.&W.R.R., and 160 m. by water S.E. Richmond. Its situation is low. The streets are generally wide, but irregularly laid out, and the houses well built of brick and stone. Among the principal buildings are the city hall, having a granite front and a cupola 110 ft. high, the Norfolk academy, mechanics' hall, and masonic temple. The custom house and the buildings of several of the banks are also elegant structures. Norfolk has a fine harbor, easily accessible and safe, admitting the largest vessels. The entrance is defended by Forts Calhoun and Monroe. In the vicinity, at Gosport, is a U. States navy yard with a marine hospital. The trade of Norfolk is facilitated by three canals; the Norfolk and Princess Anne canal; the Dismal Swamp canal; and the Albemarle and Chesapeake canal. The last is navigable by vessels of 500 tons, and steam is exclusively used for towing and transportation. The annual receipts of cotton average 500,000 bales. The value of imports into the customs district, which includes Portsmouth, for the year 1880 was \$34,874; of exports, \$9,830,352. During the same year 1,022 vessels of 988,794 tons entered, and 1,001 vessels of 1,003,428 tons cleared the port in the coast-wise trade. In 1880 there were, belonging to the district 328 sailing vessels of 8,785 tons, and 49 steamers of 4,619 tons in aggregate. The port is connected with Richmond, Baltimore, Philadelphia, and New York by regular lines of steamers. Large quantities of oysters and early fruits and vegetables are shipped to northern ports. Norfolk is not a manufacturing city, but her facilities for manufacturing are large and inviting. The city is governed by a mayor, a select council, and a common council. It has water and gas-works, several charitable institutions, 26 churches and chapels; 1 nat. and 11 other banks, and a clearing house; 4 daily and 3 wkly papers; and 6 public and several

private schools and academies, among which is St. John's theological seminary (Roman Catholic). Norfolk was founded in 1705, incorporated as a city in 1845. Pop. 21,966.

North Carolina, a S.E. State, bounded N. by Virginia, E. by the Atlantic Ocean, S. by South Carolina, and W. by Tennessee. It is included nearly between lat. 34° and 36° 30' N., and lat. 75° 30' and 84° 30' W. Its extreme length from E. to W. is 503½ m.; average breadth 100 m.; extreme breadth 187½ m.; area, 48,580 m. Its topography may be described as a vast declivity, sloping down from the summits of the Smoky Mts., an altitude of nearly 7,000 ft., to the level of the ocean. The Smoky Mts. constitute a part of the great Appalachian chain, which here attains its greatest height. This slope is made up of 3 wide extended terraces; the 1st a high mountain plateau, distinguished as the Western or Mountain section; the 2d, a submontane plateau, distinguished as the Middle section, of which the Western half is further distinguished as the Piedmont section; the 3d, the Atlantic plain, distinguished as the Low Country or Eastern section, and that part from the head of the tides downward as the Tide-water section. The State is traversed by two ranges of mountains. The 1st is the Blue Ridge, a grand and lofty chain, which runs in a direction N.E. and S.W. entirely across the State. The principal summits are Clingman's Peak (6,941 ft. high), Buckley's Peak (6,775 ft.), Mt. Mitchell (6,732 ft.), and Roan Mt. (6,306 ft.). The 2d, the Oconeechee and Uwharrie Mts., a range of much inferior elevation, crosses the State in a parallel direction near its centre. The principal rivers are the Chowan, Roanoke, Tar, Neuse, Cape Fear, and Yadkin.—The temperature of the lowlands is hot and humid, with a tendency to bilious diseases, but in the interior, particularly in the Piedmont and mountain section, the air is singularly pure, dry, and elastic. The heat of the summer day is succeeded by cool, refreshing evenings and nights; the winters, except at rare intervals, are mild and genial. The average rainfall throughout the State is 53 inches. Sandy and barren islands stretch along the 400 m. of coast, and shoals extend far out to sea, making the N.C. coast a terror to all mariners. Cape Hatteras is the extreme headland. Cape Lookout and Cape Fear are less extended; but their names do no injustice to their dangerous character. Back of the sandy islands are extensive sounds and deep bays, the principal of which are Pamlico, Albemarle, and Currituck Sounds. More than two millions of acres of swamp land in the east are covered with a growth of cedar and cypress, very valuable for timber. The "piny woods" extend across the State in a belt from 30 to 80 m. wide. Here grows to its perfection the long-leaved yellow pine, or turpentine tree. Hard woods predominate in the western section.—The swamp lands, when drained, produce very abundant crops. Much worn-out land is seen in the great midland district; but with sufficient fertilization it can be profitably cultivated. The mountain region is well adapted for grazing. A semi-tropical climate is indicated in the vegetation of the S.E. Palmetto trees are found as far N. as Cape Hatteras. The fig and pomegranate attain the dimensions of large trees. According to the census of 1880 there were in N.C. 6,481,191 acres of improved and 15,882,367 of unimproved land. The principal prod. for the year 1880 were 27,959,894 bush. of corn, 3,385,670 of wheat, 3,830,622 of barley, 284,993

of rye, 45,209 of buckwheat, 26,986,217 lbs. of tobacco, 5,609,191 lbs. of rice, and 389,616 bales of cotton. In 1880 the number of live stock on farms were 133,686 horses, 81,871 mules, 50,188 working oxen, 232,133 milch cows, 375,105 other cattle, 461,638 sheep, and 1,453,541 hogs. The culture of the vine is now an established industry, and is being prosecuted with excellent results.—The mineral resources of N.C. are very great, but thus far have not been fully developed. Gold occurs in numerous localities of the Middle and Piedmont countries, and has been mined for the last 30 years with increasing success. The Gold Hill mines, in Rowan co., have yielded abt. \$2,000,000 since they were first opened, 20 years ago. In 1803 a piece of gold weighing 28 lbs. was found in the Red Mine of Cabarrus co. Far more important than the precious metals, however, are iron and coal, which abound in the valleys of the Deep and Dan Rs. Coal measures, exceeding 30 m. in length, have been discovered in Chatham and Moore cos., and others in Stokes and Rockingham cos. The coal is bituminous and of good quality. Graphite is found in Wake co. Copper ore is largely mined in Guilford co. Extensive mica mines are worked with great profit. In Davidson co. is an important zinc mine, containing also gold and silver quartz.—The total number of manuf. establishments in 1880 were 3,802, employing 18,109 hands; capital invested, \$13,045,639; wages paid during the year, \$2,740,768; value of materials, \$13,090,937; of products, \$20,095,037. Cotton manuf. has been long an established business in N.C. There were in 1883 64 mills operating 2,858 looms and 156,030 spindles. The State stands second in the manufacture of smoking tobacco and fourth in manufacture of plug tobacco. In 1881 it manufactured 4,379,565 pounds of the former and 6,405,585 of the latter. There are 4 paper-mills, all water power, with a daily capacity of 8 tons of paper. There are also factories for the manuf. of agricultural implements, furniture and wood-work, sewing machines, &c. For a long period N.C. has been the principal source of supply for tar, pitch and turpentine. The products for the year 1880 were 663,907 barrels of rosin, and 6,179,200 galls. of spirits of turpentine. The imports, exports, and shipping of the State are given under the names of the 4 custom districts, Albemarle, Beaufort, Pamlico, and Wilmington. There were in 1882 1,619 m. of railroad in operation.—In 1880, the number of children of school age was 426,189 of whom 154,841 were colored; the average attendance were 150,788, of whom 56,837 colored. The number of public schools were 3,342; of teachers 3,371. The total expenditure was \$337,541. The principal higher institution is the N.C. university, at Chapel Hill (founded in 1795). The cities are Charlotte, Fayetteville, New Berne, Raleigh (the cap.), and Wilmington (the chief seaport and largest city).—The legislature consists of a senate of 50 members and a house of representatives of 120 members, elected for 2 years; sessions are held biennially. The governor (salary \$4,000) and other executive officers are chosen for 4 years. Appellate jurisdiction is exercised by the supreme court, which consists of 5 judges. All judges are elected for 8 years. N. C. sends 9 representatives to congress and has 11 electoral votes. In 1881 the State debt was \$5,006,616; the receipts into the treasury were \$553,029; disbursements, \$496,720; assessed value of real estate, \$101,799,424; of personal property, \$54,468,817.—In 1584 Queen Elizabeth granted letters patent to Sir Walter Raleigh "for the discovering and planting of new lands and countries." The first explorers landed on Roanoke Island July 4 (O. S.) of that year. War was waged with the S.E. caroras until 1713. "The first blood for liberty" was shed at Alamance, May, 1771. The battle of Guilford Court-House, March 15, 1781, drove the invading British army under Corn-

wallis from N.C. In 1789 the constitution of the U. States, which had been rejected in 1788, was adopted. An ordinance of secession was passed, and the constitution of the Confederate States was adopted May 21, 1861. Hostilities were closed by the surrender of Gen. Johnston's army April 26, 1865. The present constitution was ratified in 1868. Pop. in 1790, 393,751; in 1830, 737,987; in 1860, 992,622 of whom 331,059 slaves and 30,463 colored; in 1870, 1,071,361; in 1880, 1,399,750 (of whom 687,908 males and 711,842 females, 1,396,008 natives, and 3,742 of foreign birth, 867,242 whites, 531,278 colored, and 1,230 Indians).

Norwich, Conn., a city in semi-cap. of New London co., situated at the head of Thames R., in a pleasant valley surrounded by hills, on C.V. and N.Y.&N.E. R.Rs., 15 m. from Long Island Sound, and 35 m. S.E.

Hartford. The principal portion of the city lies upon the sides and summit of the eminence that rises between the Yantic and Shetucket Rs., which here unite to form the Thames. The business portion is at the base near the water, while the residences are mostly upon a plateau that extends N. from the brow of the hill. West of the Yantic is a portion of the city known as the West side or West Chelsea. Greenville, in the N.E. part of the city, on the right bank of the Shetucket, contains one of the largest paper mills in New England. At the falls of the Yantic, about 1 m. from its entrance into the Thames, the river is compressed into a narrow channel, and rushes over a rocky bed having a perpendicular descent of about 50 ft. The "Falls" in this vicinity is an active manuf. village. Norwich is connected with New York by daily lines of steamers. The harbor is commodious, and is accessible by vessels drawing 10 ft. of water. It has an important trade in coal, lumber, West India goods, groceries, and drugs. The capital invested in manuf. and transportation companies amounts to \$12,000,000. The principal articles of manuf. are machinery, rolling-mill products, printing presses, fire-arms, locks, water-wheels, type, paper, organs, and cotton and worsted goods. Norwich has good public schools, a free academy, a free reading room, a public library, 7 nat. and 2 other banks, 3 daily and 3 wkly papers, an old ladies' home, and 16 churches. —Norwich was settled in 1659; the city was incorporated in 1784. Oakland, Cal., a handsome city in Oakland tp., cap. of Alameda co., on the E. shore of San Francisco Bay, here 7 m. wide, opposite San Fran-

cisco, at the terminus of C.P.R.R. It is beautifully situated; its streets are broad, well shaded, sewered and lighted with gas, and water is supplied from a creek 5 m. distant. In the vicinity are charming drives. Oakland is a favorite residence of persons doing business in San Francisco, and is much resorted to from that city for its drives and fine scenery. San Antonio Creek, a small bay or estuary on the S. front of the city, forms a good harbor, but it is obstructed by a bar at its mouth preventing the passage of large vessels at low tide. The W. water front is shallow, and here a pier, along which the C.P.R.R., runs to connect with the ferry steamers for San Francisco, projects for 2 m. into the bay. Besides railroad tracks, this pier contains a broad carriageway, a passenger depot, warehouses, &c., and has three large docks. Oakland has graded public schools, including a high school, 2 nat. and 1 savings bank, 2 daily, 3 wkly and 3 monthly papers, and 15 churches. It is the seat of the Pacific theological seminary. Oakland was incorporated as a city in 1854. Pop. in 1870, 10,500; in 1880, 34,556; of tp. 40,334.

Ocmulgee, Ga., p.o., Monroe co.

Ocmulgee River, Ga., is formed by 3 branches, the South, Yellow, and Ulofauhachee, which rise in the N. part of the State and unite at the S. corner of Newton co. It flows S.S.E. till toward its termination, when it sweeps round in a curve to the N.N.E. and joins the Oconee at the S. extremity of Montgomery co., where the two forms the Altamaha. It receives the Little Ocmulgee, its principal tributary, abt. 10 m. from its mouth. It is navigable for small steamboats to Macon, where there is a fall affording great water-power. It is abt. 200 m. long.

O'Hara, Pa., tp., Alleghany co. Pop. 2,498.

Ohio, a river which from the extent of the area drained by its waters, the large facilities which it affords to internal commerce, and its relative position in the heart of the country, connecting the largest maritime States with the west, is second in importance only to the Mississippi. It is the great N.E. tributary of the "Father of Waters." Physically considered, the River Alleghany, which rises in Potter co., Pa., on the W. slope of the Alleghany Mts., and which is navigable for boats of 100 tons for 270 m. above Pittsburgh, is one river with the Ohio, although it does not receive this name until it forms a junction with the Monongahela, another large tributary of the Ohio, coming down from the Alleghanies in the opposite direction. This river, though a less important stream than the Alleghany, is about equal to it in width at their confluence, and is navigable at a good stage of water, for boats of a large size for abt. 100 m. from its mouth. The Ohio proper is formed by the confluence of these two rivers at Pittsburgh, where the elevation is 680 ft. above tide water, and 380 ft. above the point of junction with the Mississippi. Its average descent is not quite five inches to the mile. Immediately below the junction the Ohio is 600 yards wide, and is a placid and beautiful stream. The French called it *La Belle Rivière*, the beautiful river. Its name, however, according to Heckewelder, is an abbreviation of the Indian word *Ohiopkehanna*, meaning a very white stream and alluding probably to

the white caps with which its gentle surface is covered in a high wind. The total length of the Ohio is 975 m.; but from Pittsburgh to the mouth of the river in a straight line it is less than three-fifths of that distance. Its course till it passes out of Pennsylvania is N.N.W. to Beaver, and thence W.S.W. to the line of the State of Ohio. It then flows S. and S.W. between Ohio and West Virginia, passing Wheeling, 80 m. below Pittsburgh. The general course of the river is W.S.W. After passing between Ohio and West Virginia, it borders the whole length of Kentucky, separating that State from Ohio, Indiana, and Illinois on the north. The width of the upper third of the river, between Pittsburgh and Point Pleasant, is 1,000 ft. at low water and 1,200 ft. at high water, thence gradually increasing till near the mouth, where it is 3,000 ft. Its depth at different seasons is very fluctuating, the range between high and low water being often 50 and sometimes 60 ft. and the usual range throughout the entire river is 45 ft. During portions of the summer and in the autumn, when the water is low, the larger steamboats ascend no further than Wheeling, and even below this point they pass with difficulty, or are arrested by the sand bars, which, with the low sandy islands, called towheads, badly obstruct the navigation. At the lowest stage, generally in August and September, the river may be ford-ed at several places above Cincinnati. In the winter it is often frozen over, and for several weeks floating ice prevents its navigation. The rate of its current varies with the stage of the water from 1 to 3 m. an hour. The only rapids are at Louis-ville, and these are not insurmountable to all the steamboats. In 2½ m. the fall is abt. 27 ft. A canal was long since constructed past these rapids at Louis-ville, through which steamers of 3,000 tons may pass. The country bordering the Ohio is for the most part a thriving agricultural region, and many prosperous towns and cities have grown up within the present century on its banks. Manufactures are encouraged by the mines of coal and iron ore that abound in the country traversed by this river and its tributaries, and the prod. of these add largely to the immense transportation carried on by the boats. The tributaries of the Ohio from both sides are numerous, and many of them are important rivers, as the Muskingum and Miami of Ohio, the Wabash of Indiana and Illinois, and the Sandy, Licking, Kentucky, Cumberland, Green, and Tennessee of Kentucky. The Ohio was discovered in 1680 by the French under La Salle.

—a central State, bounded N. by Mich. and Lake Erie, E. by Pa. and W.Va., S. by W.Va. and Ky., and W. by Indiana. It is situated between lat. 38° 27' and 41° and 57' N., and lon. 80° 34' and 84° 49' W., extreme length 228 m., breadth 220 m.; area, 40,760 sq. m. This State comprises about one-third of the region sloping from the Alleghanies in Pennsylvania down to the Mississippi. It possesses no very elevated hill ranges, but consists almost wholly of a table land elevated from 600 to 1,000 ft. above sea-level; the central position of the State being the highest. This, also, which is its least fertile portion, is in parts interspersed with swamps and marshes. The declivity toward Lake Erie is much more abrupt than the S. slope of the State, and the country is here also in parts marshy; that portion of the surface which declines towards the Ohio and is the most extensive, is diversified with hills and valleys, and, on the whole, fully nine-tenths of the surface are susceptible of cultivation, nearly three-fourths being pre-eminently fertile. The Ohio R. which gives name to the State, washes half of its E. and its entire S. border. The Muskingum, the largest river which flows entirely in this State, is formed by the junction of the Tuscarawas and Walhonding R's., and enters the Ohio at Marietta. It is navigable for boats 100 m. The Scioto, the second R. in magnitude, flowing entirely

within the State, is abt. 200 m. long, and enters the Ohio at Portsmouth. Its largest branch is the Whetstone, or Olentangy, which joins it immediately above Columbus. It is navigable for boats 130 m. The Great Miami, a rapid river in the W. part of the State, is 100 m. long, and enters the Ohio in the S.W. corner of the State. The Little Miami has a course of 70 m. and enters the Ohio 7 m. above Cincinnati. The Maumee, 100 m. long, rises in Indiana, runs through the N.W. part of the State, and enters Lake Erie at Maumee Bay. It is navigable for steamboats to Perrysburg, 18 m. from the lake, and above the rapids is boatable for a considerable distance. The Sandusky rises in the N. part of the State, and, after a course of abt. 80 m., enters Sandusky Bay, and thence into Lake Erie. The Cuyahoga rises in the N. part of the State, and after a curved course of 60 m. enters Lake Erie at Cleveland. It has a number of falls, which furnish valuable mill-seats. Besides these, there are Huron, Vermilion, Black, Grand, and Ashtabula Rs., which enter Lake Erie. The geological formations are nearly all secondary, comprising limestone, lias, saliferous and ferrous rocks, sandstone, gray wacke, etc., in horizontal strata. The great bituminous coal-field of Pennsylvania and Virginia projects into the E. and S.E. parts of the State, among the W. foot-hills proper of the Alleghany mountain system, its W. boundary extending from the N.E. corner of Trumbull co., through the cos. of Portage, Wayne, Knox, Licking, and Fairfield, to the mouth of the Scioto. The coal-fields cover, in the aggregate, an estimated superficies of 12,000 sq. m. extending through 20 cos., and embrace nearly one-third of the area of the entire State. The quantity of stove coal mined during the year 1882 were 148,903,635 bush. valued at \$6,998,832. Salt springs are numerous within the carboniferous limits, and large quantities of this mineral are manufactured for market. The prod. for 1882 was 1,976,169 bushels valued at \$201,143. Iron is found in abundance between the Licking and Muskingum Rs., near Zanesville, and in the Ohio R. near the S.W. corner of Adams co., and more particularly in the cos. of Lawrence, Gallia, Jackson, Meigs, Vinton, Athens, Hocking, Perry, and Licking. The ore obtained in some of these countries is of very superior quality, being suited to the finer class of castings; it covers an area of abt. 1,200 sq. m., and has created a very extensive iron interest in the S. part of the State. The ores chiefly used in the extensive iron manufacture of the N. are chiefly obtained from the Lake Superior region. In 1882 568,644 tons of iron were mined in Ohio, and 237,774 tons were received from other States. Petroleum also forms a somewhat important mineral product of the S.E. section of the State; 1,161,303 gallons were produced in 1882. Clay, in all its forms, is found in vast quantities, as also carbonate of lime. Hydraulic cement, in large deposits, is known to exist, though it has, as yet, not been made developable. Large quantities of building stone and grindstones are quarried in the N. part of the State, and contribute pretty largely to the industrial economy of the commonwealth.—The climate of N. Ohio is of course colder in winter than the S. and central divisions, yet even here severe weather is not usual. Though the changes in temperature are great and rapid, the constantly varying winds prevent long-continued extremes. The extremes of temperature at Marietta during 23 years were 22° below zero and 93° above. During a series of years the mean temperature at Cleveland was 49.77°; at Marietta, 51.86°; at Cincinnati, 54.67°. The annual rainfall is 33.38 inches at Cincinnati, and 38.43 inches at Cleveland.—The soil of this State is, generally speaking, of the highest fertility, free from rock or stone, and readily cultivated. There is but a small proportion of the surface unavailable for agricultural production of

some sort, or absolutely unfitted for tillage. The valleys of the rivers, and, particularly, of the two Miamis, the Scioto, the Maumee, and their feeders, contain the most fertile and valuable soils. Indeed, it might be difficult to find anywhere lands equalling these in extent, surpassing them in the elements of fertility, or in agricultural capacity. The Scioto and Miami bottoms contain each an area of abt. 3,300,000 acres, and together comprise more than one-fourth of the superficies of the whole State. The basin of the Muskingum, though less in extent, has much excellent land, while the Maumee bottoms in the N. W., when once thoroughly drained, will be found equal to any in fecundity, being for the most part deep, black mould, with just sufficient sand intermixed to constitute soils of the very highest fertility. Of such a character is the "Black Swamp," in the N.W. of the State, tracts of which have of late years become sufficiently dry for cultivation, and, it is claimed, are the best corn and grass lands. The lake shores of Erie are of superior adaptation to the growth of fruits, on account of their exemption from pernicious frosts. The peach, so liable to fail in most of the N. States, finds here a congenial atmosphere, while the culture of the grape is, perhaps, more successful than in any other part of the State; in fact, some of the islands of the lake are celebrated for their vinous products. The following table, taken from the report of the Secretary of State, shows the quantity and value of the agricultural prod. of Ohio for the year 1881:—

Ohio ranks fifth among the States in respect of manufacturing industry. It had in 1880, according to the census of that year, 20,609 manuf. establishments, employing 183,609 hands; capital invested, \$188,939,614; wages paid during the year, \$62,103,800; value of materials, \$215,334,258; value of products, \$348,298,390. Cotton yarn, cotton and woolen stuffs, iron, glass, cabinet-wares, agricultural implements, paper, boots, shoes, linseed and castor oil, pork (packed), distilled and malt liquors, wines, cooperage, factory cheese, soap, and candle-

are the principal items. Timber, grain, flour, fibre, cattle, tobacco, cured meats, and spirits form the leading articles of exportation. The bulk of the great commercial and manufacturing interests centres in Cincinnati. There are in the State 3 customs districts, Miami, Sandusky, and Cuyahoga, whose ports of entry are Toledo, Sandusky, and Cleveland (which see for imports, exports, and maritime statistics). The four great trunk lines of railroad from the Atlantic cities to the Mississippi cross this State. In 1842 the first mile of railroad was completed; in 1882 the statistics were: Miles of railroad, 6,663; total cost, \$361,932,992; total stock and debt, \$490,361,079; gross earnings, \$46,759,399; net earnings, \$14,695,745. Of navigable canals the State has 796 m., including feeders and side-cuts. These were constructed between the years 1825 and 1844, at a total cost of \$14,688,667. The Ohio and Erie canal, connecting the river at Portsmouth with the lake at Cleveland, is 309 m. in length and cost \$4,695,204. The Miami and Erie, connecting Toledo with Cincinnati, extends for 250 m. and was constructed at a cost (with improvements and repairs) of \$7,463,694. The State also contains more than 6,000 m. of turnpikes and plank roads.—“Ohio has made and now maintains magnificent provision for universal education. The State commissioner of schools reports the expenditures for the public schools of Ohio for 1881 to be \$8,335,475. The high schools of townships, villages and cities carry forward a liberal education, while universities, colleges, and professional schools, several of which are practically free, supplement and crown the system. Ohio agricultural and mechanical college, at Columbus, possesses property valued at \$1,000,000. It confers the degrees of bachelor of arts, bachelor of sciences, and civil engineer. Ohio has no State normal school; but several institutions not receiving public funds are maintained for the training of teachers. Chief among them are the National normal school, in Lebanon, the Northwestern Ohio, the Ada, the Northwestern in Fostoria, the Ohio Central in Washington, the Western reserve in Milan, the McNeeley in Hopedale, the Orwell normal institute in Orwell, and the normal school in Cincinnati. The State penitentiary, erected in 1813, contained 1,356 prisoners in 1882. The deaf and dumb asylum, opened in 1869, was constructed at a cost of \$625,000. Both the above institutions, together with the asylums for the deaf and dumb, the blind and the idiotic, and the Central Ohio lunatic asylum, are located at Columbus. Other asylums for the insane have been opened at Newburg, Dayton, Athens, Longview and Toledo, of which the first three are wholly and the last two partially supported by the State. Upwards of 1,100 patients were sent to these hospitals for the insane during the year 1882. An industrial school for girls has been established at White Sulphur Springs, and a reform school for boys was opened near Lancaster in 1857. The latter institution has a farm of 1,170 acres.—The State is divided into 88 cos., viz.: Adams, Allen, Ashland, Ashtabula, Athens, Auglaize, Belmont, Brown, Butler, Carroll, Champaign, Clarke, Clermont, Clinton, Columbiana, Coshocton, Crawford, Cuyahoga, Darke, Defiance, Delaware, Erie, Fairfield, Fayette, Franklin, Fulton, Gallia, Geauga, Green, Guernsey, Hamilton, Hancock, Hardin, Harrison, Henry, Highland, Hocking, Holmes, Huron, Jackson, Jefferson, Knox, Lake, Lawrence, Licking, Logan, Lorain, Lucas, Madison, Mahoning, Marion, Medina, Meigs, Mercer, Miami, Monroe, Montgomery, Morgan, Morrow, Muskingum, Noble, Ottawa, Paulding, Perry, Pickaway, Pike, Portage, Preble, Putnam, Richland, Ross, Sandusky, Scioto, Seneca, Shelby, Stark, Summit, Trumbull, Tuscarawas, Union, Van Wert, Vinton, Warren, Washington, Wayne, Williams, Wood, and Wyandot. The cities are, Columbus (the cap.), Cin-

cinnati (the largest city), Akron, Bellair, Canton, Chillicothe, Circleville, Cleveland, Dayton, Delaware, Fremont, Gallipolis, Hamilton, Ironton, Lancaster, Lima, Mansfield, Marietta, Massillon, Mt. Vernon, Newark, Piqua, Pomeroy, Portsmouth, Sandusky, Springfield, Steubenville, Tiffin, Toledo, Urbana, Warren, Wooster, Xenia, Youngstown, and Zanesville.—The present constitution was adopted in 1851. The legislative authority is vested in a general assembly, consisting of 36 senators and 105 representatives. Biennial sessions are held. The governor (salary \$4,000) and most of the executive officers are elected for 2 years. The supreme court consists of 5 judges, who receive \$3,000 salary each. Courts of common pleas and also probate courts are held in each of the 88 counties. All judges are elected by the people. The general elections are held annually on the 2d Tuesday of October. Ohio sends 21 representatives to congress, and has 23 electoral votes. The funded public debt of the State in 1882 was \$5,201,665; the receipts into the treasury during the year were \$5,768,975; disbursements, \$5,630,219. The valuation of taxable prop. were \$1,634,910,734 (real \$1,116,681,655; personal \$518,229,079).—The country was first explored by the French, the discoveries of La Salle along the Ohio R. dating from abt. 1680. Long before that time the greater part of what now constitutes the State of Ohio was inhabited by tribes of Indians, superior in intelligence and civilization, and probably also in religious knowledge and in military skill, to the aborigines found here by the French, and later by English settlers. Their mounds and fortifications, whether intended for defence or for burial places, were constructed with an artistic skill, to which the Indians of the last two or three centuries can lay no claim. When the French soldiers passed through the country, they found there tribes of Indians differing in no respect from those of New York or Pennsylvania, though perhaps they were not so warlike or revengeful as their neighbors in the adjacent States. There do not seem to have been any white settlers within the limits of the State previous to April, 1788, when a colony from New England founded Marietta. Ohio was admitted into the Union as the 17th State on Feb. 19th, 1803. Pop. in 1800, 45,365; in 1830, 947,903; in 1860, 2,339,511; in 1870, 2,665,200; in 1880, 3,198,062 (of whom 1,613,936 males and 1,584,126 females; 2,803,119 natives and 394,943 of foreign birth; 3,117,922 whites 79,900 colored, 112 Chinese and 130 Indians).

Omaha, Neb., a city, the metropolis of the State, and cap. of Douglas co., on the W. bank of the Missouri R. here crossed by a bridge costing \$1,500,000 which connects it with Council Bluffs, Iowa, 50 m. N.E. Lincoln, and 490 m. W. by S. from Chicago. It occupies a beautiful plateau, rising gradually into bluffs. The streets are broad and cross each other at right angles. The level portion of the city is chiefly devoted to business purposes, while the bluffs are occupied by handsome residences with tastefully arranged grounds. The U. States court-house and post-office is a fine building of Cincinnati freestone, costing \$350,000. The high school building, the Grand Central hotel, and the depot of the U.P.R.R. are also noteworthy structures. Omaha is the E. terminus of the U.P.R.R. and also of branches of C., St. P., M.&O., and C., B.&Q. R.Rs. and S.W. lines. By bridge and ferry to Council Bluffs it is connected with the eastern railroad system. (See CORNER BLUFFS.) There is considerable trade, employing an immense capital. The principal manuf. are extensive smelting works, smelting and refining gold, silver, lead, and zinc; large linseed oil works, steam engine works, a cracker factory, two soap factories, and several large breweries and distilleries, besides the repair and construction shops of the U.P.R.R. There is also a pork-packing establishment. The public schools are graded and of a high character. The city is the seat of the State institution for the deaf and dumb. It has 25 churches, 2 nat. and 2 other banks, and 4 daily, 12 wkly, 4 monthly, and 1 quarterly papers. Omaha was laid out in 1854, and was incorporated as a city in 1857. Its rapid growth dates from the construction of the U.P.R.R. Pop. in 1860, 1,883; in 1870, 16,083; in 1880, 30,518.

Ontario, one of the chain of the great American lakes, lying between the State of New York and Canada. This is the easternmost and smallest in extent of the series. It is 190 m. long, with an average width of 40 m. Its greatest width is 55 m. Its circumference is 480 m. It is very deep in every part, varying from 500 to 600 ft. so that its bottom is considerably below the surface of the Atlantic. Its surface is 334 ft. below that of Lake Erie, from which, through the Niagara R., or strait, it receives the waters of all the great upper lakes, at its W. end. Its outlet, at its N.E. extremity, is the river St. Lawrence. A large number of creeks and rivers enter the Lake on the S. side, the principal of which are the Genesee, Oswego, and Black Rs. The principal bays are those of Quinte and Burlington, in Canada; and Chaumont, Gerondiquot, and Braddock's, on the American shore. The shores of this lake are generally rather low, and in some places marshy; in other parts, however, they are elevated, and the land is generally good. The most important places in New York on the lake, or near the mouth of the streams which flow into it, are Lewiston on the Niagara R., Rochester on the Genesee, Oswego at the mouth of the Oswego R. and Sackett's Harbor near the foot of the lake. On the Canada shore, are Toronto, Kingston, and Hamilton. This lake is subject to violent storms and heavy swells; but it is safely navigated by steamboats, which are large and stanchly built, and by other vessels. By the Welland Canal of Canada, which connects this lake with Lake Erie on the W. vessels are carried around the Falls of Niagara, and also around the rapids in the upper part of the St. Lawrence. It is connected with the Erie Canal and the Hudson R., by a canal from Oswego; and much valuable trade to and from

New York passes by this channel through the lake. Ontario has such a depth of water that even its harbors are seldom closed or much obstructed by ice. Daily lines of steamboats run through the lake from Ogdensburg, on the river St. Lawrence, to Lewiston, touching at all the intermediate points.

Oregon, a N.W. State, bounded N. by Wash., E. by Idaho, S. by Nev. and Cal. and W. by the Pacific Ocean. It is situated between lat. 42° and 46° 20' N. and lon. 116° 40' and 124° 35' W. The length from E. to W. is 360 m. the breadth from N. to S. 275 m.; area, 94,560 sq. m. The Cascade Mts. stretch across the State N. and S., at a distance of abt. 110 m. from the Pacific. Numerous barren snow-capped peaks, of volcanic origin, rise from them to great heights, of which the most elevated are Mount Hood (11,025 ft.), Mts. Jefferson, Thielsen, Scott, Pitt, and the Three Sisters. The Cascade Range divides Oregon into two distinct sections, known as E. and W. Oregon. Of these the former contains by far the most territory, but the latter is far more advanced in civilization, and contains abt. nine-tenths of the present pop. of the State. Another chain of mountains, the Coast Range, extends, also N. and S., over W. Oregon, at a distance varying from 40 to 70 m. from the Cascade Mts., and proportionately nearer to the Pacific coast. Its highest points are not more than 5,000 ft., and its average height abt. 2,500 ft. above sea level. E. Oregon, is subdivided, so to speak, into Middle Oregon and E. Oregon proper, by the Blue Mts., a range with a general N. and S. direction, at a distance of abt. 150 m. E. of the Cascade Mts. The Cascade Mts. and the Coast Range divide the surface of W. Oregon into numerous valleys of varying extent, traversed by more or less important water-courses. Its largest rivers are the Columbia, which separates it on the N. from Wash.; the Willamette, the largest tributary of the Columbia; Young and Lewis and Clark Rs., also flow into the Columbia; the Rogue, Coquille, Umpqua, Siuslaw, Alseya, Siletz, and Nehalem, emptying into the Pacific; and the Tualatin, Clackamas, Yamhill, Mollala, Santiam, Luekimute, Mary, and Long Tom Rs., all tributaries of the Willamette, which itself is formed by three separate streams known as McKenzie's, Middle and Coast Forks. The principal watercourses of Middle Oregon are the Des Chutes, John Day's, and Umatilla Rs., and their tributaries, the waters of which unite with the Columbia. The principal river of E. Oregon proper is the Snake R., which separates Oregon from Idaho, and its main tributaries, the Grande Ronde, Powder, Burnt, Malheur, and Owyhee Rs. There are numerous lakes in S.E. Oregon, the principal of which are Klamath, Goose, and Warner's Lakes, and Lake Harney. Oregon is not surpassed by any other part of the U. States in attractiveness and variety of scenery.

Among its distinctive features are the numerous valleys formed, as already stated, by the several mountain chains, and the minor ranges issuing from them. The principal ones in W. Oregon are the Willamette, Umpqua, and Rogue R. valleys. The Willamette valley is by far the largest and most attractive in every respect. It has been apparently named "the garden of the Northwest." It is abt. 150 m. in length, from 30 to 60 m. in width, and contains abt. five millions of acres, nearly the whole of which is of unusual productiveness, while only abt. one-tenth is now under cultivation. Within it are the most important towns of the State. The Umpqua valley lies to the S. of the Callaporia Mts., and contains abt. 25,000 acres. The valley of the Rogue R., containing abt. 2,400,000 acres, is bounded on the S. by the Siskiyou Mt., which separates it from Cal. These several valleys do not consist of wide plains, but partake more of a gentle undulating character. Hill and dale follow in succession, except in the central part of the Willamette Valley, where there is a perfectly level prairie of extraordinary fertility, abt. 40 m. long and 30 m. wide. There are no great agricultural valleys, like those of the W. part of the State, in Middle Oregon. The country S. of the Columbia, and between the Cascade and Blue Mts., for a distance of 200 m. consists of a high rolling plain. In E. Oregon proper the valleys of the Grande Ronde Powder, and Burnt Rs., resemble those of W. Oregon. The Grande Ronde Valley is said to contain abt. 275,000 acres of tillable land.—The climate of W. Oregon is peculiarly mild and equable. The temperature is moderated in the hot as well as in the cold seasons by the trade-winds of the Pacific, which blow from the N.W. in summer, and from the S.W. in winter. To the proximity of the Pacific Gulf Stream to the Oregon coast, much of the uniform mildness and evenness of the temperature is also due. As ascertained by observations made at the U. States signal-service office in the State, the average temperature in W. Oregon is in spring 52°, in summer 67°, in autumn 53°, and in winter 39°. The thermometer seldom rises above 90° in the hottest days of summer and rarely falls below 20° in the winter. The differences of temperature marking the seasons in other parts of the world being unknown; it may be said, indeed, that there are but two seasons in Oregon, namely, a wet and a dry one. The wet or rainy season usually begins abt. the middle of Nov. and lasts until early in May, with many intermissions of fine weather for days, and even for weeks. The climate of Middle and E. Oregon differs in this from the W. part of the State, that there is much less rainfall in the winter, and consequently more coldness in the latter, and more dryness in the summer. The mountains and a large part of the valleys of W. Oregon are covered with mighty forests, affording an inexhaustible supply of hard and soft timber.—The chief agricultural products for the year 1880 were as follows:—

Products.	Quantity produced.	Average yield per acre.	Number of acres in each crop.	Total Valuation.
Indian corn, bushels.	113,065	23.3	4,850	92,674
Wheat..... do.	11,734,420	17	690,290	9,152,848

Hay..... tons.	182,476	1.92	95,040	2,215,253
Total.....			979,674	14,377,521

The live stock, valued at \$14,998,005, consisted of 120,922 horses; 3,428 mules; 125,042 milch cows; 100,486 oxen and other cattle; 1,176,433 sheep; and 239,900 swine. The rivers of Oregon abound in salmon

at the proper seasons; Other varieties of fish are the cod, halibut, sturgeon, herring, smelt, etc. Lobsters, oysters, clams, and other shell fish are also common. The salmon alone is caught to any considerable extent. According to the censuses of 1880 there were on the Columbia R., 29 canneries, having a capital of \$1,100,000; product, 539,587 cases, and 25,900,176 lbs., in one-pound tins, value at \$2,697,930; hands employed 6,500.—The mineral wealth of Oreg. is very great, but as yet very imperfectly developed, mainly owing to the want of capital. Gold was first discovered in 1851, in the cos. of Jackson and Josephine, and gold-mines have since opened in several other parts of the State, but their distance from railroads, and the want of machinery for working them, has, until now, prevented their development on a scale commensurate with their richness. The gold product for the year 1881 was \$1,100,000. Large deposits of rich iron ore and coal exist in nearly every part of the State.—In 1880 there was in Oreg. 1080 manuf. establishments, employing 3,473 hands; capital invested \$6,312,056; wages paid during the year \$1,667,046; value of products, \$70,931,232. Oreg. is divided into 3 customs districts, South Oreg. (port of entry Coös-bury), Oreg. (port of entry Astoria), and Willamette (port of entry, Portland). The value of all exports in 1881 was \$5,324,503 of imports \$859,534. The entire shipments from the Columbia R., for the year amounted in value to fully \$14,000,000. Adding to foreign exports shipments to San Francisco, consisting of wheat, flour, wool, salmon, and other products, the value of which at a moderate estimate would be \$6,000,000, we have the total above indicated. Salmon alone shipped to San Francisco reached a total of 222,000 cases, valued at \$1,100,000. Wheat shipments to that city were about 400,000 centals, valued at \$600,000; and flour shipments, 320,000 sacks, valued at about \$400,000. Of wool, 26,762 bales were shipped, having a value of about \$1,400,000. Oats, flaxseed, potatoes, hides, hops, etc., would make up another half million of value. Of the vessels belonging in the State 43 tonnage 8,386 were sailing vessels; 106 tonnage 39,380 steamers; and 7 tonnage 4,801 barges. Twenty vessels, tonnage 2,135, were built in the State during the year. Oreg. had in 1882, 689 m. of railroad in operation.—The school statistics for 1880 were as follows: Public schools, 790; teachers, 999; value of school property, \$520,963; receipts for school purposes, \$351,673; number of children of school age (4 to 20 years), 56,464; enrolled in public schools, 32,518. The institutions for higher education are: Christian college, at Monmouth, which has classic, scientific and preparatory departments; Corvallis college, connected with which is the State agricultural school, having a property valued at \$239,000; McMinnville college; Pacific university, having classical, scientific and normal departments; Willamette university, which embraces a school of medicine and a school of science; and the university of Oregon, at Eugene City. The penitentiary established in 1854, 178 prisoners in 1882. An hospital for the insane, and institutions for the blind and the deaf and dumb are in successful operation.—The State is divided into 23 cos., viz.: Baker, Benton, Clackamas, Clatsop, Columbia, Coos, Curry, Douglas, Grant, Jackson, Josephine, Lake, Lane, Linn, Marion, Multnomah, Polk, Tillamook, Umatilla Union, Wasco, Washington, Yam Hill. The principal towns and cities are Salem (the cap.), Baker City, Corvallis, Oregon City, Astoria, Eugene, Albany, Portland, East Portland and Dalles.—The constitution adopted in 1857, provides that any male citizen of the U. States, 21 years old, and six months a resident of the State, may be a voter. The government is exercised by a governor (salary \$1,500), a secretary of State (\$1,500), and treasurer of State (\$800), who are chosen for 4 years. The legislature is composed of a senate

of 30 members elected for 4 years and a house of representatives elected for two years. Regular session of the legislative are held biennially. The judicial power is vested in a supreme court, circuit courts, county courts, and justices of the peace. Oreg. sends 1 representative to congress, and has 3 electoral votes. The total debt of the State in 1882 was \$304,019.78. The equalized value of real and personal property was \$59,256,175, and the total taxation \$325,917.—On May 7th, 1792, Capt. R. Gray of Boston entered the Columbia R. In 1805 Lewis and Clarke visited this region. In 1810 John Jacob Astor organized the Pacific fur company. A party sent out by his company reached the Columbia on the 24th of March, 1811, and founded Astoria. The Hudson's Bay company claimed jurisdiction over the whole country. In 1846 the 49th parallel of lat. was made the boundary between British America and the U. States. Immigrants began to enter Oreg. by the overland route as early as 1833. From 3 to 5 months were consumed in the journey from the Missouri R. The passage around Cape Horn required six months. Oreg. was organized as a territory Aug. 14, 1848, and was admitted in to the Union on Feb. 4th, 1859. Pop. in 1850, 13,294; in 1860, 52,465; in 1870, 90,923; in 1880, 174,760 (of whom 103,381 males and 71,387 females; 144,265 natives and 30,503 of foreign birth; 163,075 whites, 487 colored, 9,511 Chinese, and 1,694 Indians).

Oswego, N. Y., a river which furnishes the final outlet of the small lakes in the interior of the State into Lake Ontario, into which it flows at the city of Oswego, on the S. shore. The Oswego R. flows directly from the outlet of the Oneida Lake, and receives the waters of the other small lakes by the Seneca R. into which their several outlets are

discharged, and which unites with it about 24 m. from its mouth. Its course is about N.W. The lakes with which it is connected are, besides the Oneida, Fish, Cross, Otsego, Onondaga, Owaseo, Skeneateles, Canandaigua, Crooked, Cayuga, and Seneca Lakes. This river, for the greater part of its course, serves the purpose of the Oswego Canal, connecting the Erie Canal at Syracuse with Lake Ontario, the falls of about 100 ft., 12 m. from its mouth, being overcome by lockage. From the foot of these falls, the canal is carried along upon the E. bank of the river to its mouth, where it descends by locks to the level of the lake. An immense water-power is furnished at Oswego by this canal.

—a co., bounded N.W. by Lake Ontario, intersected by Oswego R., and drained by a number of streams falling into the lake; area, 1,038 sq. m. It has a level or undulating surface, and the soil, though generally fertile, varies greatly in different parts. The chief prod. in 1880 were 37,109 bush. of barley, 86,313 of buckwheat, 615,105 of corn, 702,706 of oats, 35,771 of rye, and 88,691 of wheat; butter, cheese, potatoes, wool, hops, flax and hay, are also largely produced. Caps., Oswego and Pulaski. Val. of taxable prop. \$20,666,976. Pop. 77,915 (of whom 11,176 for. and 269 colored).

—a city, port of entry, and semi-cap. of Oswego co., on the S. shore of Lake Ontario, at the mouth of Oswego R., on the N. Y., O. & W., the R., W. & O., and the S., B. & N. Y. R.R.s., 220 m. N.W. New York, and 145 m. W. N.W. Albany, is one of the most handsomely located of all the lake cities; it is the principal port upon the American side of Lake Ontario, and possesses considerable commercial importance, being seventh in the list of the entry ports in the U. S. for duties collected, the importations consisting mainly of Canada grain and lumber. It has also a coastwise trade. Oswego has a daily line of steamers during the navigable season to Chicago and the important places on the lake. The principal manuf. establishments are the Kingsford's starch-works, probably the largest in the world, producing 35 tons of starch daily, 15 flouring mills, with an aggregate of 76 runs of stone, capable of manuf. 6,080 barrels of flour daily, the Vulcan, Ames, and Kingsford iron works, Conde's knitting works, the Oswego shade cloth factory, sash and door factory, the car works and repair shops of several lines of railroads, and Herick's car works. Oswego has 10 grain elevators with a storing capacity of over 2,000,000 bush., 2 extensive malt houses, several barrel factories, and numerous other industries. The city is supplied with fine water-power by the Oswego R. The streets are 100 ft. wide, crossing each other at right angles. There are 2 parks, beautifully shaded, a public library, containing 20,000 volumes, a State normal and training school and an excellent public school system, 15 churches, an opera-house, 2 daily and wkly papers, a fire department, 2 nat. and a savings bank, and water-works of ample capacity. Its public buildings include the county court-house and jail, a city hall, State armory, a government building, containing the post-office, the custom house, and a U. S. court-house. Fort Ontario overlooks the lake and harbor, and is garrisoned by a company of the U. S. army. The new harbor, situated at the mouth of the Oswego R., is protected from the action of the lake water by extensive piers, and has a depth of 20 ft. and is one of the safest and most commodious harbors upon the chain of great lakes. Oswego has a mineral spring, whose water is sold under the name of the Deep Rock Spring water. Pop. 21,117; of tp. 24,139.

Pennsylvania, one of the Middle States of

the Atlantic slope, and the second in wealth, manufactures and pop. It is bounded N. by Lake Erie and New York, E. by Chautauqua co., N.Y., and by Delaware R., which separates it from Delaware co., N.Y., and from the State of New Jersey, S. by Delaware, Maryland and West Virginia, and W. by West Virginia and Ohio. It lies between lat. 39° 43' and 42° 15' N., and lon. 74° 42' and 80° 36' W. Its greatest length from E. to W. is 302.34 m., and its greatest breadth from M. to S. 175.6 m. Its mean length is 280.39 m., mean breadth 158.05 m.; area, 44,985 sq. m. The surface of Pa. is greatly diversified. There are few large tracts of level land in the State. The S.E. cos., though they can scarcely be denominated hilly, have an undulating and variable surface. South Mt. extends from the Delaware below Easton in a S.W. direction through the State, to the borders of Maryland in Adams co. Next to this, Kittatiny, or Blue Mt., extends from the Delaware Water Gap, and proceeds S.W. with a regular elevation of from 700 to 1,200 ft. above the level of the streams at its base, and terminates at Parnell's knob, an elevated and picturesque summit in Franklin co., near the S. border of the State. N. of the Blue Mt., and between the Lehigh and Susquehanna, is a wild, mountainous region, where the anthracite coal is found. The valley of Wyoming is enclosed by a chain of lofty mountains, known by many local names. Between Kittatiny, or Blue Mt., and the Alleghany, is what has been called the Appalachian chain, which consists of high and nearly parallel ridges, sometimes approaching near to each other, and at other times with valleys between them of 20 m. in breadth, frequently divided by smaller ridges. The Delaware R. washes the E. border of the State, and is navigable for the largest ships to Philadelphia. The Lehigh, after a course of 75 m., enters it at Easton. The Schuylkill is abt. 130 m. long, and unites with the Delaware, 6 m. below Philadelphia. The Susquehanna R. rises in the State of New York, and flows S. through this State, and enters Chesapeake Bay in Maryland. It is much obstructed by rapids and falls, but furnishes a descending navigation for boats and rafts, in time of high water. The Juniata rises among the Alleghany Mts., and, after a course of 180 m., enters the Susquehanna, 11 m. above Harrisburg. The Alleghany R., 400 m. long, from the N.W., and the Monongahela, 300 m. long, from the S. unite at Pittsburgh to form Ohio R., which latter flows a short distance in this State. Large tracts of mountain land are covered with a dense growth of timber. Around the headwaters of the W. branch of the Susquehanna are primeval forests from which immense quantities of lumber are cut every year. The white pine forest of the Alleghany Mts. has been a source of great wealth to the middle N. cos. Williamsport is the emporium of this trade.—The climate of Pa., though healthy and temperate, is variable and inconstant. The extremes of temperature are from 20° below zero to 98° above; but such extremes are of short continuance. The mean temperature is from 44 to 52 degrees. The soil of the State is generally good, and much of it is of a superior quality; the richest tract is on the S.E., on both sides of Susquehanna R. This part of the State has been long settled, and is under excellent cultivation. In the country W. of the Alleghany Mts. there is much fertile land. For some distance from the mountains, the country is hilly and rough. Although the State, as a whole, is better adapted to grain than to grazing, yet in many parts there are large dairies, and fine horses and cattle are raised. The most important dairy cos. are Berks, Bradford, Bucks, Chester, Crawford, Erie, Lancaster, Montgomery, Susquehanna, and York, in all of which the number of milch cows ranks from 20,000 to 35,000, and the amount of butter produced

from 1,500,000 to 3,700,000 lbs. The principal agricultural prod. in 1880 were reported by the census of that year as follows :

Products.	Quantity produced.	Average yield per acre.	Number of acres in each crop.	Value.
Indian corn, bushels.	55,804,700	40.6	1,374,500	\$29,576,491

The mineral wealth of Pa. is very great, consisting chiefly of coal, iron, and petroleum. Bituminous coal of an excellent quality and in exhaustible in quantity, is almost everywhere found W. of the Alleghany Mts., and in all the S. part of the State, to the E. of them. In Pittsburg and the vicinity, it is extensively used for manuf. purposes. The anthracite coal region, with some few exceptions, is bounded on the N.W. by the N. branch of Susquehanna R., extending in a N.E. direction for over 60 m., and divided into the southern, middle, and northern coal-fields. The S. coal-field is divided into four mining districts : the Lehigh, Schuylkill, Swatara, and Susquehanna. The middle coal-field includes the Beaver, Meadow, Hazelton, Mahanoy, and Shamokin districts. Towards the E. part both the S. and middle coal-fields afford a hard, shining, and very compact coal, difficult of ignition, but affording an intense heat, while further W., the coal is less dense and more easy of ignition, and yielding both white and red ashes. The N. coal-field is, like the others, abt. 65 m. long, and 5 or 6 broad, and from 1 to 30 ft. in thickness, and includes the Wyoming and Lackawanna coal, which is lighter than most of the other kinds of anthracite coal, and more easy of ignition, and yields a good heat, though less intense than the Lehigh, and some others. The three great deposits of anthracite coal have been calculated to contain 975 sq. m., or 624,000 acres, in some places 50 or 60 ft. deep, and as each cubic yard in the ground is calculated to yield a ton of coal, it is easy to conceive that the quantity must be immensely great. In the production of iron and steel in blast-furnaces, rolling-mills, steel works, forges and bloomeries, Pa. takes the first rank. The capital invested in these industries in the U. States in 1880 amounted to \$230,971,884, of which Pa. furnished 46 per cent. The total product was 7,265,140 tons, of which Pa. produced 3,616,668, or nearly 50 per cent. The following cos. are the principal centres of production of iron and steel : Alleghany, \$48,146 tons; Lehigh, 324,875 ; Northampton, 322,882 ; Cambria, 269,140 ; Dauphin, 223,676 ; Berks, 213,580 ; Mercer, 182,881, Montgomery, 168,628, Lackawanna, 151,273. Of 3,781,021 tons of pig iron and direct castings produced in 1880, in 23 States, Pa. made 1,930,314 tons, or 51 per cent. Of 2,353,248 tons of rolled iron of all kinds produced in 29 States and Territories in 1880

Pa. made 46 per cent. The total production of rails for 1880 was 1,217,497 tons. Of the total production of rails Pa. made 47 per cent. Of steel ingots, the total production in 1880 was 985,208 tons. Of this, Pa. made 56 per cent. Of the production of Bessemer steel rails Pa. made 55 per cent. The total product of iron ore in the U. States in 1880 was 8,022,338 tons, of which Pa. produced more than any other State, viz., 2,173,415 tons, or 27.09 per cent. The principal ore-producing cos. are, Lehigh, 321,322 tons, Lebanon, 285,629, Berks, 252,940, Blair, 154,914, Northampton, 104,788. The State produced in 1880, 28,640,819 tons of anthracite, being the entire product of the country except 6,176 tons. It also produces more bituminous coal than any other State, viz., 18,425,163 tons in 1880, out of a total of 42,420,581 tons for the U. States. The principal oil fields until the past 5 years were comprised in the W. cos. N. of the Ohio and bordering on the Alleghany R. Recently the richest and most regular flowing wells are situated in the so-called Bradford region in McKean co., contiguous to the New York State line. Fields which were productive 15 years ago have become exhausted, but it was the waste of the material which brought ruin to those districts. The new machinery which regulates as it preserves the produce of oil, has caused a more steady supply and yield. At the present time nearly \$1,000,000,000 is invested in the petroleum trade, and the average yield is abt. 70,000 barrels per week. In the days of the great oil excitement there were times when this was the daily produce. (See page 40).—Apart from the production of iron, in every co. of the State are industrial establishments of various kinds. According to the Federal census of 1880 there was in Pa. 31,232 manuf. establishments, employing 387,009 hands, capital invested \$471,510,993, wages paid during the year \$134,055,904, value of materials, \$465,020,563, value of products \$744,818,445. Numerous as are the manuf. of iron, glass, cotton, woolen and other goods, the resources of the county are so immense that no better locality in the Union is offered for investments.—Pa. is favorably situated for commerce, being connected with the three great systems of water communication of the Atlantic Ocean, the Mississippi and the lakes, through the ports of Philadelphia, Pittsburg, and Erie (which see). In 1882, according to Poor's Manual, the whole number of railroad corporations whose lines are wholly or partly in the State was 166 ; length of miles operated in Pa. 6,690. Prominent among them is the Pennsylvania, probably the most powerful railroad in the world ; nearly 2,500 m. of railroad in Pa. are operated by it, and its investments in this State are estimated at not less than \$150,000,000 ; besides which it owns or leases a large extent of road outside of the State.—The canal system of Pa. comprises 12 distinct lines, with a total length of 920 m., of which 507 are within the limits of the State. The Schuylkill Canal is 108 m. long ; the Pennsylvania Canal (360 m.), has 169 locks, 536 bridges, and 68 aqueducts ; of the Delaware & Hudson Canal (108 m. long), but 25 m. are in Pa., and the Erie & Pittsburgh Canal intersects the N.W. tier of cos.—By the new constitution the legislature is required to provide for the maintenance and support of an efficient system of public schools, and to appropriate at least one million dollars every year for that purpose. The following educational statistics are taken from the report of the superintendent of public instruction for the year 1882 : Number of schools 19,183, of graded schools 7,812, of normal schools 12, number of teachers 21,819 (males 9,051, females 12,778) ; number of pupils 945,345 ; average number of pupils attending school 611,317 ; total sum expended for school purposes in the year, \$8,263,244 ; estimated value of school property, \$28,341,560. Scattered over the State are numerous pri-

vate and select schools, but the high standing of the public schools in the larger towns and cities, and the number of excellent normal schools, are lessening the number of academies and seminaries. The number of colleges in the State is 28, the more prominent of which are the university of Pennsylvania, at Philadelphia; Lafayette college, at Easton; Lehigh university, at Bethlehem; Dickinson college, at Carlisle; Pennsylvania college, at Gettysburg; Jefferson college, at Cannonsburg; Alleghany college, at Meadville; with others of not less importance and prominence. Of theological seminaries under the control of the various religious denominations, the State is prolific, while in medicine and forensic lore the city of Philadelphia has been the seat for over a century. The medical department of the university of Pennsylvania, and Jefferson medical college, are the most influential and reputable institutions of the kind in the U. States.—There are in Pa. 2 penitentiaries, of which the Eastern, at Philadelphia, is conducted on "the separate system," and the Western, at Pittsburg, upon "the combined" system. Abt. 1,000 prisoners are confined in the two institutions. The house of refuge at Philadelphia will accommodate 820 inmates, and the reform school at Pittsburg provides for 228 pupils. Abt. 50 almshouses have been established, with real estate valued at abt. \$6,000,000, in which abt. 13,500 paupers can be cared for. There are 4 State hospitals for the insane, located at Harrisburg, Dixmont, Danville and Warren. A department for the insane is connected with the Philadelphia almshouse, and the Pennsylvania hospital for the insane (Kirkbride's) and the Friends' asylum are in the same city. The Pa. institution for the deaf and dumb and for the blind are schools rather than asylums.—The State is divided into 67 cos. Harrisburg is the cap.; Philadelphia and Pittsburg are the largest cities. The other cities are Alleghany, Allentown, Carbondale, Chester, Columbia, Corry, Erie, Franklin, Lancaster, Lock Haven, Meadville, Pottsville, Reading, Scranton, Titusville, Wilkesbarre, and Williamsport.—Under the amended constitution of Dec. 16th, 1873, the legislature consists of 50 senators, chosen for 4 years, and 200 representatives, chosen for 2 years. Biennial sessions are held, beginning on the first Tuesday of Jan. The governor holds office for 4 years, and is not eligible for re-election at the term next succeeding that for which he was first chosen. The supreme court consists of 7 judges, elected by the people for a term of 21 years and not eligible to re-election. Each co. containing 40,000 inhabitants constitutes a separate judicial district. A separate orphans' court is established in every city and co. having a pop. of 150,000. The State election is held on the Tuesday after the first Monday of November. Pa. sends 28 representatives to congress, and has, therefore, 30 electoral votes. The public debt in 1882 was \$20,225,083.28. The receipts at the Stat treasury for the year ending Nov. 30th, 1882, were \$16,428,650.11; expenditures, \$14,850,871.18; valuation of personal property (real estate is not taxed for State property) \$97,921,651.—William Penn received from the English crown a grant of "all that tract of land bounded E. by the river Delaware, extending W. five degrees, and N. and S. between the 40th and 42d parallels, except an area around New Castle (Delaware) circumscribed by a radius of twelve miles." In October, 1682, Penn, accompanied by 2,000 settlers, arrived at New Castle, and in 1683 Philadelphia was chosen as the site for the new colony. Very amicable relations were established with the Indians, and Penn's people were exempt from the horrors of savage warfare which were inflicted upon almost every other colony. The part which Pennsylvania took in the American Revolution is mentioned in this work under PHILADELPHIA. Pop. in 1790, 434,373; in 1810, 810,091; in 1830, 1,348,233;

in 1850, 2,311,786; in 1860, 2,906,215; in 1870, 3,521,951; in 1880, 4,282,891 (of whom 2,136,655 males and 2,146,236 females, 3,695,062 natives and 587,829 of foreign birth, 4,197,016 whites, 85,535 colored, 156 Chinese, and 184 Indians).

Penobscot, Me., a large and important river, which, with its numerous branches waters a great portion of the State. It is formed by the junction in Penobscot co., of two chief branches. The western and larger rises near the Canada border. The eastern branch, also called Sebouis R., proceeds from several small lakes in the N. part of Penobscot co. The main stream pursues a course a little W. of S., receiving among its most important affluents the Piscataquis on the W. and the Mattawamkeag and Passadumkeag on the E. and falls into Penobscot bay. Its total length, from the source of the W. branch is about 275 m. and from the junction abt. 135 m. To Bangor, 55 m. from its mouth, it is navigable for large vessels. Above this point small steamers run for many miles. Along its course it has numerous falls, affording considerable water-power which is only in small parts utilized. It is the most important salmon-stream in the U.S., its product excelling in value and quality of fish, though not in quantity, that of the Columbia R.—PENOBSCOT BAY extends from Owl's Head on the W. to Coast Island on the E., a distance of 80 m. At its mouth are Fox Islands, Deer Isle, Isle of Haut, and several smaller ones. It extends inland to Belfast Bay at the mouth of Penobscot R., a distance of 20 m. N. from Owl's Head. This bay contains many good harbors.

—a central co., intersected by Penobscot R.; area, 2,900 sq. m. It has a diversified surface and a generally fertile soil. Formerly it comprised a very large territory, which has been gradually cut up to form other cos., and its outlines are very eccentric, it being composed of three parallelograms irregularly disposed. The chief prod. in 1880 were 320,174 bush. of oats, 107,351 of wheat, 71,137 of corn, 29,367 of barley, and 28,394 of buckwheat; potatoes, butter, cheese, wool and hay are also largely produced. Cap., Bangor. Val. of taxable prop. abt. \$30,030,000. Pop. 70,478 (of whom 6,077 for., and 493 colored).

Penobscots, a tribe of Indians in Maine, belonging to the Abenaki group of Algonquians. They number abt. 500, have a fund of \$53,000 in the hands of the State, and reside chiefly on Indian island, opposite Oldtown, where they have a church, town hall, and schools. The Passamaquoddy, an allied tribe, also abt. 500 in number, reside at Dennis island and Pleasant point, on the W. shore of Passamaquoddy

bay, and on the Schoodie Lakes. Both tribes are Roman Catholics.

Pensacola, Fla., city ♦, port of entry, and the cap. of Escambia co., on the N.W. side of Pensacola Bay, abt. 10 m. from the Gulf of Mexico, and on the L.S., N.P.&M., and P.&P.R.Rs., 180 m. W. of Tallahassee, and 53 m. E.S.E. Mobile. The country immediately around Pensacola is sandy, little cultivated, and covered with pines. It has an excellent harbor, with 21 ft. of water on the bar, and was a place of considerable importance during the Spanish and English government of Florida. It has a navy-yard and forts, and was the scene of important military and naval operations during the civil war. Pensacola has 2 semi-wkly papers, several schools, a custom-house, and a considerable trade in lumber. The climate is usually healthy, but subject to occasional visitations of yellow fever. Pensacola was settled by the French in abt. 1696. Pop. in 1870, 3,347; in 1880, 6,846.

Pensacola Bay, Fla., an inlet extending from the Gulf of Mexico into Santa Rosa co., abt. 30 or 35 m. in a N.E. direction. At a little more than half this distance from the sea it separates itself into two divisions, Escambia Bay on the W. and on the E. the bay of Santa Maria de Galvez with its subsidiaries, East and Black Water Bays. The former receives the waters of the Escambia R., the latter, those of the Black Water and Yellow Water. The entrance of the bay, between Santa Rosa Island on the E. and the mainland on the W. is little more than 1 m. wide, but within it expands into a capacious harbor, from 4 to 8 m. in width, and entirely land-locked. There is a depth of abt. 22 ft. of water on the bar. The entrance of Pensacola Bay is defended by Fort Pickens on the E. and Fort McRee on the W. Abt. 1½ m. to the N. and immediately in front of the entrance (the W. shore making an abrupt turn E.), stands Fort San Carlos de Barrancas. Near this fort are the lighthouse, extensive barracks, and the naval hospital. About a mile above the hospital is the navy yard, situated on Tartar point, and 7 m. above is the city of Pensacola.

Philadelphia, Pa., a port of entry, the principal city of the State, and the second in pop. in the U. States, is situated between the Delaware and Schuylkill Rs., abt. 6 m. above their junction, and 96 m. from the Atlantic by following the course of Delaware R. and bay; 138 m. N. E. of Washington, and 90 m. S. W. of New York city, by rail; lat. 39° 57' N., and lon. 75° 10' W. The surface of the city is generally level, the ground, however, making a gradual ascent towards the N. The co. of Philadelphia being inclosed within the municipal limits of the city, gives the latter a greater supericies of jurisdiction than is found to belong to any other city of the Union. West Philadelphia, Germantown, Manayunk, and Frankford form its most important suburbs; they are thickly populated, and adorned with handsome private residences. The city was originally built in the form of a parallelogram, with main streets running E. to W., or from river to river, with others intersecting them at right angles. Market St. and Broad St., the former running E. and W., and the latter (on the highest ground between the rivers) N. and S. divided the city, as first founded, into 4 nearly equal divisions, of which the most populous lies E. of Broad St. The plan of the city as originally laid out, has been followed in the construction of

the new portions N., S., and W., but with considerable and improved variations. The principal streets average from 50 to 80 ft. in width, excepting however, Market St., which has a breadth of 100 ft., and Broad St., one of the most spacious avenues in the U. States, with a space of 120 ft. across. The city is well provided with large and handsomely arranged public parks and squares, of which the principal are Fairmount and Hunting Parks, the latter containing 45 acres, and Franklin, Penn., Rittenhouse, Washington, Logan, and Independence Squares; the latter in the rear of the State house. These squares vary in their several extents from 5 to 7 acres, and are well laid out with a profusion of noble trees, and several handsome fountains. Fairmount Park in the N.W. outskirts of the city, in point of natural beauty of location and extent, is excelled by none in either hemisphere. It is picturesquely situated on both sides of the Schuylkill R., extending upward along that river abt. 5 m. and thence abt. 6 m. more up the Wissahickon,—a spot of peculiar scenic beauty,—and containing altogether a tract of 2,740 acres. P. possesses many fine, and some imposing public buildings. Foremost among these is Girard college, located abt. 2 m. N.W. of the State house. The custom house and sub-treasury is a specimen of Doric architecture. The new city hall (Penn. square), of marble, to cost over \$10,000,000, is said to exceed in size the U. States capitol. The new post-office, of granite, will be the peer of any post-office edifice in the world. The U. States mint, has a frontage of 122 ft., with a central portico 62 ft. long, and an inner court; forming, altogether, a fine and commodious building, which was begun in 1829 and completed in the following year, at a cost of \$200,000. The merchant's exchange, built on the triangle forming the intersection of Walnut, Third, and Dock Sts., erected at a cost of abt. \$300,000, presents an external appearance commensurate with the commercial wealth and importance of the city. The chamber of commerce, lately rebuilt on 2d St., is a fine building. The State house,—“the cradle of American liberty”—a plain brick edifice of antique aspect, is situated on the Chesnut St. front of Independence square, and consists of a central building surmounted by a spire furnished with a clock and bell, and two wings, in which are ensconced the city and county officers. On the first floor of the main building is Independence Hall,—a large apartment decorated with quaint carvings, and with its wainscotted walls serving as a picture gallery of great American worthies,—derives its distinctive appellation from having been the place of assembly of the congress which, in 1776, issued the memorable declaration of American independence. Among other notable buildings are the young men's christian association hall, Presbyterian board of publication, horticultural hall (Broad St.), the university building, the academy of fine arts, academy of natural sciences, zoological society buildings, Ridgway library, masonic hall, erected at a cost of \$1,300,000 Wagner institute, memorial hall, occupied by the Pennsylvania museum and school of industrial art, horticultural building, besides many other buildings of lesser note. P. is liberally supplied with theatres and places of public amusement. Of these the P. academy of music is one of the first edifices of the kind in the U. States. Many of the private and public edifices are very elegant, such as the union league club house, those of the mutual life insurance company, the Public Ledger, The Times, the farmer's and mechanics' bank, Philadelphia, first national, guarantee, fidelity, Girard building, and other banking institutions. The ecclesiastical architecture of P. presents many fine examples of divers styles, such as the Roman Catholic cathedral, the Jewish synagogue, St. Mark's (Epis.), &c. At the corner of Broad and

Spruce St. stood the superb Beth-Eden Baptist church, which was burned in 1881. The city is replete with religious edifices; there being altogether abt. 550 places of worship. The environs of the city comprise many handsome cemeteries, such as Laurel Hill, Woodland, Mount Vernon, Mount Moriah, Glenwood, &c. Of the buildings connected with the social wants of the community are the gas and water-works, prisons, alms-houses, houses of refuge, house of correction, &c. The institutions devoted to benevolent purposes include the Pennsylvania, Episcopal, German, St. Joseph's, City, Philadelphia, University, Jefferson, Jewish, Presbyterian, Germantown, Orthopaedic, woman's hospitals, and Will's hospital for the treatment of the eye, Preston retreat, or lying-in hospital, houses of industry, several dispensaries, asylums for the insane and feeble-minded, blind asylum, widows' asylum, Christ church hospital, Burd asylum, deaf and dumb asylum, colored orphan asylum, union benevolent association, Western house of employment, news-boys' home, humane society, eye and ear infirmary, Magdalen asylum, house of the Good Shepherd, and numerous others, in all 256 various charitable and philanthropic institutions. The public establishments applying to the intellectual and artistic requirements of the Philadelphians are on a corresponding scale of magnitude and efficiency. The university of Pennsylvania, possessing the oldest medical college in the U. States, founded in 1765, has long been celebrated for the superior advantages it offers to students from all quarters of the Union. The Jefferson medical college, a younger but equally flourishing school, the female medical college, Wistar and Blomer anatomical museum, Wood's pathological museum, &c. The Philadelphia college of pharmacy, and two dental colleges, with the eclectic and homœopathic medical colleges, are all flourishing institutions. The scholastic provision instituted for the commoner demands of education, finds active employment for 2 high schools, 62 grammar, 27 consolidated, 132 secondary, and 225 primary schools—total, 448—which have an aggregate attendance of abt. 100,000 scholars, controlled by a staff of 1,950 teachers. The expenditures for the support of schools in 1880 was \$1,844,260. The literary resources of this city are embodied in the Philadelphia library, founded by Benj. Franklin, and incorporated in 1742, and its new branch—the Ridgway library contains abt. 150,000 volumes. The mercantile library, established in 1821, housed in a handsome and commodious building erected in 1869, contains 135,000 volumes, the Athenæum library 20,000, and the apprentices', founded in 1820, with 25,000 volumes. The library of the university contains 10,000. The Friends have a collection of abt. 25,000 volumes, and taking colleges, associations, and public and private libraries into account, it will be found that the amount of literary pabulum furnished the citizens makes a total of over 500,000 volumes. The academy of natural sciences, established in 1812, besides a valuable library of 28,000 volumes, upon natural history and kindred subjects, possesses the largest museum of natural history in the U. States, including choice and extensive ornithological, zoological, herbarian, and mineralogical collections. The Franklin institute, founded in 1824 for the promotion of the mechanical arts, has a collection of abt. 20,000 volumes, of scientific works, in conjunction with valuable cabinets of mineral specimens, mechanical models, &c. The historical society and philosophical society have each valuable collections of books. The Pennsylvania academy of fine arts possesses a good collection of paintings of the modern school. The U. States navy yard, at League Island, on the Delaware, was purchased in 1862 for the sum of \$310,000, and presented by the citizens to the national government, as a naval station for the construction of ships

of war, and embraces an area of 923 acres. The U. States arsenal, founded in 1800, is located below the naval asylum, on the Schuylkill, and is used principally as a magazine and depot of clothing. A large arsenal located near the Delaware R., near Frankford, covers several acres in extent. Cramp's dry dock, built at a cost of \$450,000, is capable of accommodating vessels of 450 ft. in length. The U. States naval asylum, a fine white marble building, with a frontage of 380 ft. and the naval hospital, can accommodate nearly 580 persons.—The commercial importance of P. has steadily increased since the opening of the Pennsylvania RR. to Pittsburg, whereby it has effected direct communication with the Mississippi Valley and the far West. The coal, petroleum, and grain trades are very extensive; and several large elevators have been erected, one at Girard Point has a capacity for storing 800,000 bush. of grain. The city is in direct intercourse with the chief Atlantic and Gulf ports, Liverpool and Antwerp, by lines of steamships and coasters.—The manuf. are extensive and greater in the variety of articles made, the number of persons employed, and the value of materials used than in any other city in the Union. The plentifulness of water, proximity to coal fields, together with the breadth of the space available for large manuf. establishments, and the comfort which mechanics may enjoy with their families, have contributed to this result. In 1880, according to the U. States census, there were in P. 9,050 manuf. establishments, employing 197,964 hands; capital invested \$186,686,934; wages paid during the year \$63,027,832; value of materials, \$202,506,644; value of products, \$322,984,461. The manuf. comprise textile fabrics, machinery, hardware, tools, boots and shoes, chemicals, &c. Some of the largest and most extensive iron works are to be found in this city. One locomotive works alone employs 3,000 hands, with facilities for constructing 700 engines per annum. Extensive business is carried on in car wheels, heavy machine tools, castings, &c. P. is justly celebrated for manuf. of gas tubing and gas fixtures. Of certain grades of carpeting and small woolenware, P. has almost a monopoly. Large paper mills abound in the vicinity of the city, and tend to make P. an economical emporium of book and paper trade. Ship building is largely carried on, and the iron vessels constructed upon the Delaware have attained a great celebrity.—The commerce of the port has been for several years steadily increasing, the increase being chiefly on breadstuffs and produce. For the year 1882 the value of exports to foreign countries was \$38,131,258; imports, \$34,136,579. Total imports and exports, \$72,267,837, which was 4.90 per cent of the general commerce of the U. States. The vessels which entered the port in the foreign trade were 426 American, of 274,444 tons, and 1,313 foreign, of 1,055,961 tons. There were 940 vessels of 211,653 tons belonging to the port, of which 587 sailing vessels of 125,179 tons, 279 steam vessels of 75,268 tons, 45 canal boats of 5,990 tons, and 29 barges of 5,216 tons. The vessels built during the year were 55 of 28,991 tons, of which 38 of 24,470 tons were steamers.—The rail roads which have their depots in the city are the C. & A., the C. G. & M. E., the Penn., the P., N. & N. Y., the P. & A. C., the P., W. & B., the P. & B. C., the P. & R., the W. C. & P., and the W. J.—In 1882 there were 32 nat. banks with an aggregate capital of \$16,530,000; 20 State and savings banks, and 207 newspapers and periodicals (of which 20 were daily). The principal theatres are the academy of music (3,000 seats), the Walnut street (1,500 seats), the Arch street (1,800 seats), the Chestnut street (2,500 seats), the American (2,800 seats), the Grand Central, and the museum. P. has a large number of markets, some of which are of large size and superior character.—P. is divided into 31 wards. The mayor is elected for 3 years. The

legislative authority is vested in a select council of 31 members elected for 3 years, and a common council of 68 members elected for 2 years. The U. States courts for the eastern district of Pa., meet here, and terms of the State supreme court are held here. There are 4 courts of common pleas, each consisting of 3 judges, which have coordinate jurisdiction in civil matters within the city. P. sends 8 senators and 38 representatives to the State legislature. The police force is under command of a chief, assisted by 4 captains, and consists of 1,200 men. There is a paid fire department, under the control of a board of 7 commissioners. The force consists of a chief engineer, 5 assistant engineers, and abt. 400 men, organized into 27 steam engine companies and 5 hook and ladder companies. The city is supplied with water from the Schuylkill and Delaware R.s., chiefly from the former. There are 7 works; the Fairmount, on the Schuylkill, at the lower extremity of the park, the Schuylkill, the Spring Garden, the Delaware, the Belmont, the Roxborough, and the Frankford. These works pump in average abt. 45,000,000 gallons per day. The water department is in charge of a chief engineer. The debt of the city in 1882, was: gross, \$72,264,596; net, \$54,223,844.

The assessed val. of taxable prop. in 1880 was \$623,711,085. P. was founded by William Penn, who came over from England in 1682, accompanied by a colony of Quakers, and purchased the site from the Indians. The emigration thither was very rapid, and in 1684 the pop. was estimated at 2,500. Penn presented the city with a charter in 1701. It prospered greatly, and was the most important city in the country during the colonial period and for more than a quarter of a century after the revolution. The first continental congress assembled here (in 1774), as did also the subsequent congresses during the war. The declaration of independence was made and issued here, July 4, 1776. The convention which formed the constitution of the republic assembled here in May, 1787. Here resided the first president of the U. States, and here congress continued to meet until 1797. Until 1797 it was the capital of the colony and State of Pa., and from 1790 to 1800 was the seat of the government of the U. States. The city was in possession of the British from September, 1777, to June, 1778, a result of the unfortunate battles of Brandywine and Germantown. Since the revolution the city has grown steadily and rapidly. Pop. in 1778 (census by General Cornwallis), 21,767; in 1800, 41,200; in 1820, 121,376; in 1850, 408,762; in 1860, 565,529; in 1870, 674,022; in 1880, 846,984.

Pima, Ariz., a S.E. co., bounded N. by Gila R., E. by N. from Mexico, and S. by Mexico, and intersected in the E. portion by the Rio San Pedro and Rio San Domingo, tributaries of the Gila, and by the Santa Cruz R.; area, 19,220 sq. m. The portion of the co., W. of Tucson and S. of the Gila valley is uninhabited except by the Papago Indians, who occupy a reservation near the Mexican border. This region consists of plains interspersed with broken or detached chains of mountains, and is covered with grass a part of the year, and considerable portions of it with mezquite, but it is deficient in water. The valley of the Gila, with irrigation, is very productive, and portions of it in this co., are from 5 to 10 m. wide. The Maricopa and Pima Indians occupy a reservation 25 m. long in this valley, W. of the centre of the co., E. of Tucson the surface consists of plains, valleys, and broken chains of mountains. The greater part is covered with nutritious grasses, and live oak and mezquite abound. The valleys with irrigation produce two crops a year. Gold, silver, copper, and lead are found in the mountains. The greater portion of this co. has been subject to the incursions of the Apaches. Mining and cattle and wool-raising are the leading pursuits. Cap., Tucson. Val. of taxable prop. abt. \$3,500,000. Pop. 17,007 (8,709 for., and 1,391 Indians).

Pimas, a family of Indians, formerly extending over Arizona, and in Mexico over Sonora and part of Sinaloa, and including the Pimas people, the Opatas, Eudeves, and Joves. They have always been an agricultural people, they embraced christianity at an early day and faithfully adhered to it. The Pimas now within the limits of the U. States in Arizona, occupy along with the Maricopas, a reservation of 64,000 acres on both sides of the Gila R. from Maricopa Wells to Sacaton, in Pima and Maricopa cos., set apart for them in accordance with the act of Feb. 28, 1859. They are tall, bony, and well-formed, are fond of athletic games, wear cotton blankets of their own manufacture, live in villages of dome-shaped huts, and wage a perpetual warfare against the Apaches. They cultivate the soil by means of irrigation, are skillful in weaving, in basket and boat making, and have a rude kind of pottery. They have much degenerated since the whites from the north entered their country, the men being thieves and the women corrupt. They now number abt. 4,000, and are under the religious influence of the Reformed (German) Church.

Pittsburg, Pa., the cap. of Alleghany co., the 2d city of the State in pop. and importance, the 12th in pop. and one of the chief manuf. cities in the Union, is situated at the confluence of the rivers Alleghany and Monongahela, which by their union, here forms the Ohio, which is at this place a quarter of a mile wide, and navigable by steamboats to the Gulf of Mexico through the Mississippi R.: 466 m. above Cincinnati, and by rail, 354 m. W. by N. from Philadelphia. It is built on a beautiful plain between the two rivers of a triangular form. Abt. a mile back of the point it is surrounded by Grant's, Ayer's, and Quarry hills. It is substantially and compactly built, with many handsome residences, to which, however, a dingy appearance is given by the dust of the bituminous coal, so extensively used in its manuf. and otherwise, whence it is styled "Smoky City," while it owes its appellation of "Iron City" to the extent of its iron manuf. Five bridges span the Monongahela R. and 7 the Alleghany, 5 of which connect Pittsburg with the city of Alleghany. The hills with which the city is surrounded are filled with bituminous coal, which can easily be brought to the city, and affords unequalled facilities for manuf. Among the public buildings are the municipal hall, the court-house, the custom-house and post-office, the U. States arsenal, and the mercantile library, a spacious and handsome building, containing 15,000 volumes and reading rooms. Of the 150 churches of the city, the most noteworthy are the Roman Catholic cathedral of St. Paul, and Trinity church (Episcopalian). There are in Pittsburg 2 theatres, an opera house, an academy of music, and several public halls. The railroads which centre here, affording direct connection with all parts of the country, are the A.V., the C.&P., the Penn., the P., C.&St.L., the P., F.W.&C., the B.&O., the P.&C.P., the P.&L.E., the P.S., and the P.&W. Additional facilities for traffic are afforded by the 3 rivers. Lumber and oil are transported to a considerable extent on the Monongahela R., nearly all the lumber from the W. cos. of the State finding its way to market in rafts by this stream. Coal and coke are produced in large quantities on the Monongahela, and are floated in barges to Cincinnati, Louisville, and New Orleans when the rivers are in flood. The consumption, quantities shipped, and production of coal and coke at Pittsburg for the year 1881, was as follows: quantity consumed, coal 40,000,000 bls., coke 30,000,000; quantities shipped by river, coal 75,000,000 bls., coke 3,780,700; quantities shipped by rail, coal 88,471,755, coke 104,221,140; total production, coal 203,471,755 bls., coke 138,001,840 bls. Pittsburg is a port of delivery. The number of vessels belonging to the port in 1881 was 214 of 52,711 tons in aggregate, of which 169 of 36,467 tons were steamers, and 45 of 16,244 tons were barges. The number built during the same year was 27 steamers of 6,424 tons. A new and promising industry is the building for exportation steam and other boats of iron, steel, and wood fitted and put together here, then taken apart and sent by rail

to New York, thus shipped to the port of destination, and there put together complete for sea or river service. The statement of the industries of Pittsburg, given by the U. States census of 1880, being limited to Pittsburg proper, does not show what is truly the business of the city, which should include that of its sister city of Alleghany, or in fact of Alleghany co. The twin cities of Pittsburg and Alleghany are so directly and intimately associated and connected in business that it would be very difficult, in fact almost impossible, to separate them, Pittsburg and Alleghany capital, brains and industry, being employed in the mills, factories, warehouses, and offices of either city. The following statement, showing the business of Pittsburg, Alleghany, and immediate vicinity (exclusive of the retail industries), was prepared by Mr. G. Follansbee, superintendent of the chamber of commerce of Pittsburg.

Pittsburg had in 1882, 24 nat. banks, with an aggregate capital of \$10,150,000, and 20 State and savings-banks. It is divided into 37 wards. It is governed by a mayor, a select council, and a common council. It has a police force and an efficient fire department. The assessed value of prop. is abt. \$250,000,000. The city is liberally supplied with pure water, the new reservoir being said to be of sufficient capacity to supply a city with 1,000,000 inhabitants. There are 5 gas-works, and gas is better and cheaper here than in any other city of the Union. Pittsburg has

an excellent system of ward schools, with a high school for advanced pupils. The Western university, founded in 1819, has 250 students, and ranks among the best educational establishments in the country. The Pittsburg female college (Methodist), is also a flourishing institution. There were, in 1882, 49 newspapers and periodicals, of which 11 were daily. Pittsburg was laid out in 1765, on the site of the old French Fort du Quesne, famous in colonial annals, and on its capture by the British its name was changed to Fort Pitt, in honor of Wm. Pitt. The city charter was granted in 1816. Pop. in 1800, 1,565; in 1830, 12,542; in 1860, 49,221; in 1870, 86,076; in 1880, 156,381.

Platte River, is formed in Lincoln co., Neb., by the union of the N. and S. forks. The former rises in the North Park, Col., receiving the Sweetwater, the Laramie, and other streams. The South Platte flows from the South Park of Col., and in its upper course is extensively utilized in irrigation and as a source of water-power. The united stream flows E. and reaches the Missouri near Plattsmouth, Cass co., Neb. It is the widest, but neither the largest in volume nor the longest affluent of the Missouri. Its mouth is over 1,000 yards wide, but it is so very shallow that it can nowhere be navigated with much success. Its valley is generally very fertile. The drainage area is estimated at 7,500 sq. m. The Loup fork and Elkhorn are the chief tributary streams. Estimated length (from the source of the North fork) 900 m.

Portland, Me., a city ♦.

Portland, Me., the commercial metropolis of the State, port of entry, and cap. of Cumberland co., is very pleasantly situated on a peninsula at the W. extremity of Casco Bay, between Casco R. on the S. and Back Cove on the N., 68 m. S.S.W. of Augusta, 108 m. N.N.E. of Boston, and 290 m. S.E. of Montreal, by rail. Lat. 43° 39' N., lon. 70° 15' W. The length of the peninsula, from E. to W., is 3 m., and its average width abt. $\frac{3}{4}$ m., containing abt. 2,200 acres of land. The ground on which the city is built rises, towards both its E. and W. extremities, into considerable elevations, which give a beautiful appearance to the general outline of the place, as it is approached from the sea. The city is regularly laid out, especially the more modern portions of it, and several of the streets are among the handsomest in any of our cities. It is built mostly with brick ; and the dwellings, always neat, are, many of them, spacious and elegant. Beautiful elms and other shade trees adorn several of the more retired avenues. For a city of its size, Portland has exceptionally fine public buildings. The city hall is one of the largest and finest municipal structures in the country. It is surmounted with a graceful dome 160 ft. high. The post-office is a beautiful building of white Vermont marble, in the mediæval Italian style. The custom-house, erected at a cost of \$485,000, is a handsome granite structure, with elaborate ornamentation within. The society of natural history has a fine collection of birds, fishes, reptiles, shells and minerals. The library, incorporated in 1867, contains 15,000 volumes. The Marine hospital, erected in 1855, at a cost of \$80,000, is an imposing edifice. On a promontory at the E. end of the city, rising abt. 100 ft. above the water, stands a tower, 70 ft. high, erected in 1807, by the merchants of Portland, for the purpose of observing vessels at sea. It is furnished with a large telescope, and with signals to be raised on the approach of vessels making this port. This position commands a most extensive and beautiful prospect in all directions, embracing the Atlantic Ocean as far as the eye can reach ; Casco Bay, to the mouth of the Kennebec, with the numerous verdant and beautiful islands reposing upon its bosom ; the Agamenticus hills in York, and the whole range of mountains on the borders of N.H., from Ossipee, near Lake Winnipisogee, to the White Mts., which constitute the crowning feature of the landscape. The serene, majestic form of Mount Washington, as it stands in clear relief against the distant heavens, is here a most impressive object ; while below, "in the immediate vicinity," as one has said of it, "lie the city and adjacent country, as a gem in its emerald setting." The principal lines of railroads which have here their E. terminus, are the E., the M.

C., the P.&O., the B.&M., the P.&R., and the G.T. Portland is the winter port of the ocean steamers connecting with G.T.R.R. at Montreal in summer, and plying to Liverpool and Glasgow. There are 2 lines of steamers daily to New York, daily boats to Boston, and lines to Bangor, St. John and Halifax. The harbor is one of the best in the U. States, being near the ocean, easy of access, safe and ample, with sufficient depth of water for the largest vessels. It is not obstructed with ice, except occasionally in the most extreme cold weather. This city, from its relative position, enjoys fine advantages for trade and commerce. The foreign trade is chiefly carried on with the West Indies, South America and Europe, the exports being for the most part provisions, lumber, ice, and fish, and the imports molasses, sugar, crockery, salt and iron. The value of imports for the year 1882 was \$2,650,000 (of which \$326,432 were foreign exports); of exports \$2,453,394. The number of entrances from foreign ports in 1882 was 338, tonnage 176,789; clearances 478, tonnage 235,773; entrances in the coastwise trade and fisheries, 728 of 610,064 tons, clearances 597 of 550,240 tons. There were, belonging to the district, 351 sailing vessels of 108,915 tons, 23 steamers of 7,985 tons, and 2 barges of 718 tons; built during the year, 5 sailing vessels of 3,256 tons, and 2 steamers of 165 tons. The vessels employed in the cod and mackerel fisheries in 1882 were 135 of 5,824 tons. Portland has 19 public schools, numerous charitable associations, 25 churches, 3 lines of street cars, 6 nat. banks, besides private banking houses, 28 newspapers and periodicals (of which 5 daily), a safe deposit company, 2 iron rolling-mills, manuf. of locomotives and marine engines, a dry dock deeper than any other in the U. States, and manuf. of carriages, furniture, varnishes, etc. The canning of corn and lobsters is extensively carried on. The city is divided into 7 wards, and is governed by a mayor and a board of aldermen of one member, and a common council of 3 members, for each ward; it has an organized police force, an efficient fire department, and is abundantly supplied with good and clean water from Sebago Lake, 17 m. distant. Portland was settled in 1632, and has had a steady growth; but on the night of July 4, 1866, a great fire swept away half the business portion, destroying \$10,000,000 worth of property. The entire district destroyed by the fire has since been rebuilt. Pop. in 1800, 3,704; in 1870, 31,413; in 1880, 33,810.

Portland, Mich., p.v. and tp., Ionia co., on Grand R., 26 m. N.W. Lansing by D.L.&N.R.R. It has fine water-power, a wkly paper, 2 banks, a union school, 2 foundries and several mills. Pop. 1,670; of tp. 2,809.

Portland, Oreg., a city, cap. of Multnomah co., and port of entry of the district of Willamette, on the W. bank of the Willamette R., 12 m. above its mouth in the Columbia, and 122 m. by these rivers from the Pacific ocean, 50 m. N. of Salem, and 530 m. N. of San Francisco. It is the head of ship navigation, and is built on a plateau rising gradually from the river, a range of fir-covered hills surrounding it in a semi-circle on the west, and commanding fine views of the Willamette valley with the Cascade Mts. in the distance. The streets are regularly laid out, well paved, lighted with gas, and except in the business portion shaded with maples. There are many

handsome residences and good public buildings. Portland is the N. terminus of the O.C.R.R. and is connected by two ferries with East Portland on the opposite bank of the Willamette, the N. terminus of the O.&C.R.R. A semi-wkly line of steamers run to Victoria, British Columbia, a tri-monthly line to San Francisco, and a monthly line to Victoria and Sitka, Alaska. There are also frequent lines to various points on the Columbia and Willamette Rs. A daily line to Kalama, Wash., 50 m. distant, connects with the Pacific div. of the N.P.R.R. for points on Puget Sound. The trade and commerce of Portland are increasing rapidly, the chief articles of shipment being wheat, flour, salmon, and lumber. The greater part of the wheat is exported to the British Isles, while the flour is shipped to San Francisco, New York, Liverpool, China, and Japan. The total exports for the year 1880 amounted to \$3,105,290. During the same year 125 vessels of 203,193 tons in aggregate entered and 102 vessels of 187,746 tons cleared the port in the coastwise trade. In 1881 there were belonging to the port 10 sailing vessels of 2,346 tons, and 57 steamers of 27,079 tons in aggregate. The U. States courts for Oregon are held here. There are good graded schools, an Episcopalian grammar and divinity school, 2 Roman Catholic academies, a library association with a reading room and a library of 7,000 volumes, 1 nat. and 5 other banks, 4 daily, 14 wkly, and 6 monthly papers, and numerous foundries, saw-mills, and factories. Portsmouth, N.H., a city, port of entry, and semi-cap of Rockingham co., the only seaport in the State, is built on a beautiful peninsula, on the S. side of the Piscataqua R., abt. 3 m. from the ocean, and on B., L.&C. and E.R.Rs., 54 m. N. by E. from Boston. The ground rises gradually from the harbor, affording to the city a peculiarly pleasant and healthful situation. It is supplied with excellent water, brought by an aqueduct from a fountain 3 m. distant, and has a good fire department. The Piscataqua is from $\frac{1}{2}$ to $\frac{3}{4}$ m. wide where it passes the town, and although the current has so much rapidity as to prevent the river from freezing, it forms one of the most secure and commodious harbors in the U. States, into which ships of any size may enter with perfect safety. It is well protected, by its islands, from the N.E. storms, which are the most to be dreaded on this coast, and can be easily defended, and rendered perfectly impregnable, in time of war. The main channel passes on the E. side of Great Island, on the

N.W. point of which is Fort Constitution, and opposite, in Kittery, is Fort McClary. On two other islands are Forts Washington and Sullivan. There is another entrance on the S. side of New Castle, called Little Harbor, where the water is shoal and the bottom sandy. The U. States navy yard, situated on the harbor of Portsmouth, is admirably located for its objects on an island called Continental, or Badger's Island, on the E. side of the river, within the limits of Kittery tp., Me. Here is every convenience for the construction and repair of vessels of the largest class, among which a balance dry dock, 350 ft. long, 121 ft. wide, and 72 ft. high. The value of the foreign commerce of Portsmouth is unimportant. In the coastwise trade 1,067 vessels of 119,355 tons entered, and 1,033 vessels of 120,527 tons cleared the port in 1880. In 1880 there were belonging to the port 71 sailing vessels of 10,505 tons and 6 steamers of 317 tons in aggregate. The manuf. are of considerable extent, and include cotton fabrics (Kearsarge mills, with 26,000 spindles), hosiery, ale and beer, boots and shoes, carriages, medicinal cod-liver oil, copper and brass foundry products, sleighs, soap, leather, &c. Ship-building is also carried on. There are high and graded schools, a commercial college and a young ladies' seminary, the Portsmouth Athenæum with a reading room, a library of abt. 12,000 volumes, and cabinets of minerals and natural history, 4 nat., 2 savings, and 1 other bank, 2 daily and 4 wkly papers, and abt. 12 churches. Portsmouth was settled in 1623, and incorporated as a city in 1849. It was the cap. of the colony and State till 1807. Pop. 9,690.

Portsmouth, Va., a city and seaport of Norfolk co., on the left bank of the Elizabeth R., opposite Norfolk with which it is connected by ferry, and at the terminus of the S.&R.R.R. It is on level ground and is regularly laid out. The harbor is one of the best on the Atlantic coast, and is accessible by the largest vessels. Gosport at the S. extremity of the city is the seat of a U. States navy yard, dry dock, and naval hospital. Lines of steamers run to Boston, Providence, New York, Philadelphia, Baltimore, Washington, Richmond, and other points. The exports are cotton, lumber, oak staves, naval stores, pig iron, and early vegetables for the Northern cities. There are 13 churches, 2 banks, 2 daily and 2 wkly papers, 2 academies, 12 public schools, and several factories. Pop. 11,390.

Potomac, a river forming the S. boundary of Md. through its whole course, dividing it from Va. and W. Va. It rises by two main branches in the Alleghany Mts., called the N. branch and the S. branch; and also receives numerous other streams from the same elevated regions, which are among its more distant sources. The course of the two main branches is N.E. at first, until the N. branch passes Cumberland, where it is inflected to the S.E. and breaks through several ridges of elevated lands into the valley of the S. branch, and forms a junction with it. From the junction, which is abt. 20 m. S.E. Cumberland, its course forms an irregular curve, first N.E. and then generally S.E. until it reaches the city of Washington. Thence flowing S. and S.W. it expands into an estuary from 6 to 8 m. broad, and after a course of 40 m. again changes to S.E. for abt. 70 m. and enters Chesapeake bay, 75 m. from the Atlantic, the entire length being nearly 400 m. Its principal tributary is the Shenandoah, which enters it just W. of the Blue Ridge. Several other streams, but none of considerable size, also contribute to its volume. Of these the principal are the Savage and Monocacy R.s., and the Conococheague, Patterson, Occoquan, and Aquia Creeks, all of which are navigable for short distances. The tide extends to Georgetown, 125 m. from its mouth, and it is navigable for ships of the line to the city of Washington. From its source to tide water the river has a great descent. There are a number of falls, including Houre's, the Shenandoah, Seneca, Great, and Little; and from Westport to Washington, abt. 220 m. the difference in its altitude is 1,160 ft. It abounds in beautiful scenery, and its passage through the Blue Ridge at the junction of the Shenandoah at Harper's Ferry ranks among the finest natural curiosities of the country.

Prairie (prá'ri), [French, a *meadow*], is a tract of country in its natural state, covered with grass. In this country the name has been applied by the early French explorers to the great fertile, treeless plains which lie between O. and Mich. on the E. and the arid plains on the W. The region over which they mainly extend is the W. part of O., nearly the whole of Ind., Ill., and Iowa, the S. part of Mich., the N. part of Mo., and portions of Wis., Kan., and Neb. On the head waters of the Illinois and Wabash, and S. and W. of Lake Michigan, the prairies are very level and smooth, and are termed flat. Those of other regions, where the surface is undulating and broken by the depressions of the streams, are known as rolling prairies. Trees are met with upon the prairies under peculiar circumstances of moisture and soil, in scattered groups, called groves, or along the larger streams, or occasionally on low rocky ridges. West of the Mississippi they become less frequent, and near lon. 98° W. they disappear altogether. The soil of the prairies is generally free from stones. In the swales and in some of the bottom lands the rich black vegetable mould is very deep, but on the upper prairies its depth is usually from one to two ft. The subsoil is almost invariably an argillaceous loam, more or less mixed in its lower portions with sand and occasional pebbles. The vast plains lying between the 99th and 104th meridians, and reaching from the Big Horn Mts. on the N. to the Llano Estacado on the S., differ from the prairies in being arid and partly desert, although irrigation generally renders them very fertile. The mound prairies near Puget Sound, and in other parts of the Pacific coast, are so called because they are thickly studded with earth mounds, generally 3 or 4 ft. high and 30 to 40 ft. in diameter at the base.

Prairie, Ark., a central co., bounded E. in part by the White R., which also intersects it, and N. by Cypress bayou, one of its branches; area, 710 sq. m. The chief prod. in 1880 were 135,462 bush. of corn, 31,944 of oats, and 6,977 bales of cotton. Cap., Des Arc. Val. of taxable prop. abt. \$3,000,000. Providence, R.I., a N. co., bordered N. and E. by Mass. and W. by Conn., and drained by the Blackstone R., which runs partly along the E. border, and the Pawtuxet, which forms a portion of the S. boundary; area, 390 sq. m. It has an uneven surface and generally fertile soil. Market garden products, potatoes and hay are extensively raised. The manuf. interests are of very considerable magnitude. Cap. Providence. Val. of taxable prop. abt. \$250,000,000. Pop. 197,874.

—the largest city in the State, port of entry, cap. of Providence co., and semi cap. of the State, is the 2d city of New England in wealth and pop. It is situated at the head of navigation on Providence R. (an arm of Narraganset Bay), and on the B.&P., the N.Y.&N.E., the P.&S., the P.&W., the N.Y., P.&B., and the P., W.&B. R.R.s., 35 m. from the sea, 30 m. N.N.W. Newport, 40 m. S.W. Boston, and 169 m. N.E. New York. The river extends to the centre of the city when it expands into a cove nearly a mile in circumference, surrounded by an elm shaded park, which, in its situation and capability, is one of the most attractive features of any city in the country. The land on the E. side of the river is hilly, attaining, at its greatest height, 204 ft. above tide water. The soil is rich and heavy. On the W. side of the river the land is more level, and the soil light and sandy, its greatest height above tide water being only 78 ft. The harbor of Providence is safe and commodious, but it is not safely approached by large vessels without a pilot. Commerce was the favorite pursuit of the citizens of Providence at an early period of its history. The East India business, before 1812, was pursued with great success for many years. Since that period, this and all foreign commerce has gradually declined. The value of imports from foreign countries for the year 1882 was \$124,004; exports, \$1,214. There is still a large amount of coasting business done in Providence. There were belonging to the port in 1882 115 sailing vessels of 15,104 tons, and 29 steam vessels of 22,440 tons. But for years the attention of the money-making part of the community has been withdrawn from commerce and fixed on manuf. Much of the capital and enterprise of Providence men is invested in the manuf. establishments in and near its borders. The water power is occupied to its full extent, besides which there are in operation a large number of steam engines. They are employed in grinding grain, sawing and polishing marble, printing, bleaching, calendering, and dyeing cloths, sawing and planing lumber, driving bellows in furnaces and foundries, manuf. machinery, screws, nails, rubber shoes, small wares, furniture, power loom pickers, carriages, iron, gold and silver wares, fire-arms, cotton and woolen goods, refining gold and silver, &c. The most prominent industry is the manuf. of gold jewelry, in which are engaged abt. 150 establishments of all sizes. There are abt. 25 establishments engaged in the manuf. of woolen cloths, yarns, &c., and worsted goods, and abt. 50, with 150,000 spindles, in the manuf. of printing cloths, yarns, batings, thread, spool cotton, lacings, braids, &c. Providence is the leading market for the trade in cloth printing, and has the largest manuf. of solid silver ware and of "small wares" in the world. There are 25 nat. banks having an aggregate capital of \$12,000,000; 9 State banks; 7 savings banks; and 6 private bankers. The city is noted for its elegant and spacious private residences, surrounded by beautiful and expensive grounds. The most noteworthy buildings are the arcade, the largest of the kind in the U. States, the city hall, the State house, the county court-house, the opera house, the Butler exchange, the Union depot, and the Narraganset hotel. There are also several handsome churches. Westminster street is the main business thoroughfare. On the

heights in the E. section of the city are the spacious grounds and substantial buildings of Brown university, an old and important institution of learning, founded in 1764. Its library numbers over 50,000 volumes and is housed in a handsome fire-proof building. The museum of natural history is rich in specimens, and the art collection includes some good portraits. The grounds comprise 16 acres, and are shaded with grand old elms. The Rhode Island historical society has a fine brick and granite building opposite the University grounds, in which are a valuable library and some interesting historical relics. The Athenaeum is a substantial granite building, containing a reading-room, a library of 38,000 volumes, and some valuable paintings. The Butler hospital for the insane occupies large and imposing buildings on the W. bank of Seekonk R., surrounded by extensive grounds and commanding broad views. The Dexter asylum for the poor is a fine edifice of brick, situated on elevated land in the N.E. part of the city. The Rhode Island hospital has stately buildings surrounded by pleasant grounds in the S. part of the city, fronting on the harbor. The reform school is in the S.E. section of the city, and near by is the home for aged women. The State farm, in Cranston, comprises 500 acres, and contains the State prison, work-house, house of correction, almshouse, and State hospital for the insane. The city has always been noted for the number and effectiveness of its public schools and higher institutions of learning, among the latter of which, besides Brown university are the yearly meeting boarding school, under the control of the society of Friends, 3 flourishing Roman Catholic academies, and the female academy of the sacred heart of Jesus. There are 5 daily and 15 weekly and monthly papers and periodicals. The city is divided into 10 wards, and is governed by a mayor, a board of aldermen of 10, and a common council of 40 members, elected annually. It is liberally, since 1871, supplied with excellent water from Pawtuxet R., 6 m. distant, the waterworks costing abt. \$4,500,000. The police force numbers abt. 200 men, and there is an efficient paid fire department, consisting of 150 officers and men, divided into 5 steam-engines, 6 hose, and 3 hook and ladder companies. Providence was settled by Roger Williams in 1636, received its first patent in 1643, suffered much in the war of King Philip in 1675, and was incorporated as a city in 1832. Pop. in 1800, 7,614; in 1850, 16,836; in 1860, 50,666; in 1870, 68,904; in 1880, 104,850.

Puget Sound, Wash., an inland sea, perhaps the finest body of water in the world. It extends S. from the E. end of the Strait of Fuca, through which it communicates with the Pacific Ocean, into the N. W. portion of the territory, for a distance in a direct line of about 80 m. Its principal constituents are Admiralty Inlet, Puget Sound proper, the S. termination of this inlet, and Hood's Canal. Admiralty inlet extends from Strait of Fuca a little E. of S., with an average breadth of nearly 6 m., for 70 m., and communicates with the sound proper through the "Narrows," 1 m. wide and 4 m. long. The sound extends S. W. from the Narrows, ramifying into numerous bays and inlets, and containing many islets. Hood's Canal branches off from Admiralty Inlet 18 m. S. of the Strait of Fuca, and extends S. W., with an average breadth of 2 m., for 50 m., when it bends abruptly and extends N. E. for 15 m., nearly connecting with the waters of the sound. Hood's Canal on the one hand and Admiralty Inlet and the sound on the other, enclose a peninsula of which Kitsap co. forms the greater part. "Nothing can exceed" says Admiral Wilks, in a report to the Navy Department, "the beauty of these waters and their safety. Not a shoal exists within the Straits of Juan de Fuca, Admiralty Inlet or Hood's Canal that can in any way interrupt their navigation by a 74-gun ship. I venture nothing in saying there is no country in the world that possesses waters equal to these. They cover an area of abt. 2,000 sq. m. The shores of all these inlets and bays are remarkably bold; so much so that in many places a ship's side would strike the shore before her kneel would touch the ground. The country by which these waters are surrounded is remarkably salubrious and offers every advantage for the accommodation of a vast commercial and military marine, with convenience for docks and a great many sites for towns and cities, at all times well supplied with water and capable of being well provided with everything by the surrounding country, which is well adapted for agriculture. The Straits of Juan de Fuca are 95 m. in length and have an average width of 11 m. At the entrance (8 m. in width) no danger exists and it may be safely navigated throughout. No part of the world affords finer inland sounds or a greater number of harbors than are found within the Straits of Juan de Fuca, capa-

ble of receiving the largest class of vessels, and without a danger in them which is not visible. From the rise and fall of the tides (18 feet) every facility is offered for the erection of works for a great maritime nation. The country also affords as many sites for water-power as any other." There is a slight error in the report as to the length of the straits, but it is correct in everything else. The whole length of the shore line of Puget Sound, as shown by the Coast Survey, is as follows:—

	Miles.
Straits of Juan de Fuca.....	161
Rosario Strait, Canal de Haro, Gulf of Georgia.....	627
Admiralty Inlet.....	334
Hood's Canal.....	192
Puget Sound proper.....	280

Total..... 1,504
 The statistics of the Puget Sound trade are very meagre and imperfect. Most of the coal and lumber leaves the sound in coasting vessels, and no record is kept of the quantity they ship.

Red River, the first large river which enters the Mississippi above its mouth, coming down from the far S.W. It rises in the Llano Estacado or great Stake Plain in the Pan-Handle of Texas, in lat. 34° 40' N., lon. 103° 2' W. It flows E. to the 100th meridian, then S. and E. by S., separating Texas from Indian T. and Arkansas, and entering the latter State, bends to the S., passes into Louisiana, and afterwards flows S.E. until it falls into the Mississippi, 341 m. below its mouth. Its length is abt. 1,200 m., and its basin is abt. 97,000 sq. m. in extent. Its remotest drainage-slope is on an elevated and barren plain, 2-450 ft. above sea-level, marked by no channels or hills, but by a few isolated water-holes, which from time immemorial have been designated by stakes to guide even the Indian traveler. The imperceptible slopes converge at abt. lon. 102° on the same lat., and then enter a canyon of more than 100 m. in length amid broken mountains, and of such depth (500 to 1,000 ft.) and such steepness as to be inaccessible, so far as known, except at the two extremities. This remarkable chasm has a varying breadth of 5 to 20 m., said to have a soil of great fertility. It is owned and held by Comanches and Stake Plain Indians, who effectually guard it against white intrusion. On emerging from the canyon, the river flows over a broad bed of light shifting sands through an arid prairie country to the "cross timbers" a belt of woodland between the 98th and 97th meridians. Below this the river flows through rich and densely wooded alluvial bottoms. Here the borders contract, and the water for a great portion of the year washes both banks, carrying the loose alluvium from one side and depositing it on the other, in such a manner as to produce constant changes in the channel, and to render navigation difficult. This character continues throughout the rest of its course; and in this section it is subject to heavy inundations, which often flood the bottoms to such a degree as to destroy the crops, and occasionally leave a deposit of white sand, rendering the soil barren and worthless. Its depth greatly varies, being only 6 or 8 ft., even in floods, throughout the desert, while it is some 50 ft. in the fertile region. In extreme low water a depth of 3 ft. may be depended upon below Alexandria, about 4 ft. thence to the head of the raft, and 1 ft. thence to Fort Towson (Ind. Ter.). Steamers of 4 ft. draught can ascend to Shreveport, La. (330 m. above its mouth), at any time except in extreme low water, but to Fort Towson or even Fulton for only about three months in the year, and frequently only run in one direction during a single rise. The raft, an immense collection of trees and drift wood, extending abt. 15 m. from Shreveport above, has long obstructed the navigation but in 1873 a navigable channel was opened through its whole length. Red R. receives its name from its peculiar color, supposed to be derived from the red clay of the gypsaceous formation through which its upper course lies. The chief tributaries on the left bank are the North fork (a little W. of the 99th meridian) and the Washita, in Indian Ter., Little R. in Arkansas, and Black R., formed by the Washita and Tensas, which enters in Louisiana not far from the Mississippi. On the right bank the chief tributaries are the Pease and Big Wichita R.s., which enter from W. Texas. In Louisiana, Red R. sends off numerous bayous, which find their way back again to the main stream, forming frequent lakes.

Red River of the North, rises from Elbow Lake, 1,680 ft. above the sea, on the border of Becker and Beltrame cos., Minn. It flows S. for abt. 100 m. through several small lakes to Otter Tail Lake, and thence W. 100 m. to Breckinridge, Wilkin co. whence it runs N. abt. 550 m. separating Dakota from Minnesota, crossing the U. States boundary, traversing Manitoba, and finally flowing into Lake Winnipeg (628 ft. above the sea). The portion between Breckinridge and Otter Tail Lake is also called Otter Tail R., the term Red R. being sometimes restricted to the portion below Breckinridge. It is sluggish, except at the rapids or chutes, flowing through a very flat prairie, between clay banks varying from 20 to 60 ft. in height.

Rhode Island, a New England State, the smallest in the Union, bounded N. and E. by Massachusetts, S. by the Atlantic Ocean, and W. by Connecticut. It is situated between lat. 41° 8' and 42° 3' N., lon. 71° 8' and 71° 53' W. The greatest length is 48 m., the breadth 39 m., and the area, (including water surface) 1,250 sq. m. The natural features of the State are somewhat peculiar. About one-tenth part of it is water, and of the residue, a very considerable portion is made up of islands. The interior, with the exception of the intervals along the streams, is generally rough and hilly, better adapted to grazing than to the raising of grain. The most considerable hills in the State are Mount Hope in Bristol, Pine in Exeter, Easchaogue and Hopkins in West Greenwich, Chopmist in Scituate, Neutaconkanet in Johnston, Woonsocket in Smithfield, and Diamond in Cumberland. Narragansett Bay, which divides the State into two unequal parts, leaving far the greater portion on the West, extends N. from the Atlantic Ocean a distance of 28 m. It is from 3 to 12 m. wide, and holds in its embrace the islands of Aquidneck, or Rhode Island, Conanicut, and several smaller ones. The first named, which has been called the "Isle of America," is 15 m. long, from 3 to 3½ m. wide, and contains abt. 50 sq. m. It comprises the city of Newport, the town of Middletown, and the greater part of Portsmouth. Newport, near its S. end, is a celebrated watering place. Newport harbor, which lies between Conanicut and Rhode Island, is one of the finest in the world, and has a depth of water sufficient for the largest ships. Conanicut is 7 m. long and about 1 m. wide, and forms the town of Jamestown. Projecting southward from the mainland on the E. is a peninsula which divides Narragansett Bay and forms Mt. Hope Bay, at the head of which Taunton R. enters. In the Atlantic, abt. 10 m. S. by W. of Point Judith (at the W. entrance of Narragansett Bay), is Block Island. R.I. has 3 considerable rivers, which, though none of them navigable for any great distance, afford valuable water-power; these are the Pawcatuck, called above the town of that name the Blackstone, the Pawtuxet, which flows S.E., and the Pawcatuck, which flows through the W. portion of the State and forms a part of the boundary between Rhode Island and Connecticut.—The W. half of the State and a small tract along the E. shore of Narragansett Bay are Eozoic, but a tract covering all the islands of Narragansett Bay and part of its western shore belongs to the Carboniferous era and forms the easternmost bed of anthracite in the U. States. The coal has not been esteemed as equal to the Pennsylvania anthracite in quality, though perhaps even more extensive in quantity, but it improves

in quality as lower strata are reached. About 10,000 to 15,000 tons are annually mined. Excellent iron ore is found in various parts of the State, and lime of the best quality is burned from the limestones at Lime Rock, which belong to the coal measures and abound in fossil plants. Sandstone, serpentine and marble abound in several parts of the State, and excellent brick are made from the clay of Providence co.—The soil of the State is for the most part moderately fertile, though the gravelly and pebbly soil of the W. part, and the sand-dunes and salt marshes of the S.W., are exceptions; but much of it is broken, rocky and difficult of cultivation. The islands of Narragansett Bay and the region drained by Pawtucket and Pawtuxet Rs., is the most arable.—The vegetation does not differ materially from that of Massachusetts and Connecticut, though, from the presence of a large body of landlocked water like Narragansett Bay, the temperature is somewhat milder than that of either of the adjacent States. About one-fourth of the surface is in woodland. The flora and fauna also of the State are almost without exception those of Massachusetts and Connecticut. Narragansett Bay is a favorite resort for the duck, brant and teal families, and the swamps and marshes adjacent for snipe, woodcock and grouse.—The climate, though modified to some extent by the influence of the bay, is not materially different from that of the adjacent States. The summer climate of Newport is delightful; the E. winds are tempered by the breadth of land over which they come, and the S. winds become mild by the influence of the Gulf Stream. Careful observations upon meteorology were made by Professor Caswell, of Brown university, at Providence, during a period of 29 years. The mean of Feb. (the coldest month) for the whole period was 26.73°, and the mean of July (the warmest month), 70.69°. The highest annual mean was 49.86°, and the lowest, 44.62°; mean for the 29 years, 48.19°. Fifteen degrees below zero was the lowest temperature recorded, and 94 degrees above the highest, giving a range of 109 degrees. The largest annual rainfall was 53.27 inches, and the smallest, 30.96 inches; mean for the whole period, 40.38 inches.—R.I. is not an agricultural State. Her pop. is too dense, and her best lands too valuable for town-sites, to make farming, except in the way of market gardening, largely profitable. The area of farming-lands in the State, as in Massachusetts and Connecticut, has been gradually diminishing, mainly because the lands were becoming too valuable to be cultivated as farms. The crops of cereals are never large enough for home consumption. The principal products in the census year 1880 were 17,783 bush. of barley, 327,967 of corn, and 159,339 of oats. The live-stock in farms consisted of 9,661 horses, 3,523 working oxen, 21,460 milch cows, 10,601 other cattle, 17,211 sheep, and 14,121 hogs.—R.I. is essentially a manuf. State. It stands 8th among the States of the Union in the amount of capital engaged, and 14th in the value of products; but in proportion to area or pop. it is unrivaled. In 1880 the State had 2,205 manuf. establishments, employing 62,878 hands; capital invested, \$75,575,943; wages paid during the year, \$21,355,619; value of materials, \$58,103,443; value of products, \$104,163,621. The first cotton-mill in the U. States was erected in R.I., which now stands next to Mass. in this branch of industry. In 1880 there were 115 cotton-mills working 29,660 looms and 1,764,569 spindles employing 21,474 hands; capital invested, \$28,047,331; wages paid during the year, \$5,320,303; bales of cotton consumed 177,480; value of materials, \$12,291,437; value of products, \$22,875,111. The other leading industries are printing, cotton and woolen goods, bleaching and dyeing, woolen goods, machinery, cotton and woolens, jewelry, worsted goods, screws, India-rubber and elastic goods. The State is divided into 3 customs

districts whose ports of entry are Bristol, Newport, and Providence (which see). In 1882 there were 212 m. of railroad in operation in the State.—The public schools are free, and are supported by State, town and district taxes. In 1882 the number of children in the State between the ages of 5 and 15 years was 52,273; children attending public schools, 33,504; number of schools, 824; number of teachers, 889; expenditures for school purposes, \$544,200. Brown university is the only college. An agricultural and scientific department has been added to it. The boarding school of Friends at Providence has a property valued at \$850,000. The newly established school for the deaf, which has been established only four years, is on a successful basis, and has 25 pupils. The permanent school fund of the State is \$266,950. The penal, correctional, and charitable institutions on the State farm at Cranston cost \$147,190 for support during the year 1881. A new reform school, with separate departments for boys and girls, has been added, for which the buildings are not yet complete. In 1882 the work-house and house of correction contained 180 men and 57 women; the asylum for the incurable insane, 113 men and 132 women.—R.I. is divided into 8 cos., viz.: Bristol, Kent, Newport, Providence and Washington. Providence and Newport are the capitals; the other cities are Lincoln, Pawtucket, Warwick, and Woonsocket. The legislature consists of a senate of 36 members, and a house of representatives of 72 members. They hold two sessions annually, the principal one at Newport, and an adjourned one at Providence in Oct. The executive power is vested in a governor and lieutenant-governor, both annually elected by the people. The secretary of State, attorney general, general treasurer, and State auditor, are also chosen by the people. The commissioner of public schools was for many years appointed by the governor and senate, but is now chosen by the board of education. The judicial power is vested in a supreme court, consisting of 1 chief-justice and 4 associate justices, which holds its sessions twice a year in each co., and has both appellate and original jurisdiction; of courts of common pleas, presided over by one of the associate justices of the supreme court, also holding sessions twice a year in each co.; of justices' courts; and of probate courts, the judges of which in Providence, Pawtucket, and East Providence, are elected by the general assembly. The State sends 2 members to congress, and has 4 electoral votes. The State debt in 1882 was \$2,521,500. The receipts into the treasury for the year 1881 amounted to \$919,792; expenditures, \$794,655. The val. of taxable prop. was \$328,530,559 (real estate, \$243,658,190; personal, \$84,872,369).—The official designation of the State is "the State of R.I. and Providence Plantation." It was first settled by Roger Williams, who fled from religious persecution in Mass., in June, 1636. He received a grant of territory from the Narragansett Indians, March 24, 1638, and obtained a charter in 1644, which was renewed by Charles II. in 1663, and remained in force till 1842 when—after an insurrection, in which a number of the people took up arms under Wilson Dorr, who was made prisoner,—a new constitution was agreed to, and became into force in 1843. R.I. suffered much from the Indian wars, until the defeat and death of Philip, king of the Wampanoags. It was seized by the English, Dec. 8, 1776; attacked by the French and Americans without effect, Aug. 8, 1778; abandoned by the English in 1779; and occupied by the French, July 11, 1780. R.I. was the last of the States that gave in their adherence to the federal constitution, which was done in May, 1790. Pop. in 1790, 68,825; in 1830, 97,199; in 1860, 174,620; in 1870, 217,353; in 1880, 276,531 (of whom 133,030 males and 143,501 females; 202,538 natives and 73,993 of foreign birth; 269,939 whites, 6,488 colored, 27 Chinese, and 77 Indians).

Richmond, Va., a port of entry, the cap. and largest city of the State, also cap. of Henrico co., is pleasantly situated on the N. side of James R. here crossed by 5 bridges, immediately below the falls, at the head of tide-water, and 150 m. from its mouth, on the R.&P., the R., F.&P., the C.&O., R.&D., and R., Y.R. & C. R.R.s, 116 m. S.S.W. of Washington by rail. Directly opposite to Richmond, and connected to it by two bridges, is Manchester, which may be regarded as a suburb of the city. From its peculiarly favorable situation, between the upper and the lower country, Richmond is one of the most healthy cities in the U. States. Seldom, if ever, has it been visited with yellow fever, or any desolating epidemic. The city is divided into two unequal parts by a valley, through which passes the Shockoe Creek, to enter James R. It is chiefly built upon the more elevated grounds on either side of this depression, which present a beautiful variety of surface, and afford in many parts highly picturesque situations for dwellings and for public edifices, Shockoe Hill, on the W. part of the city, and Richmond Hill stand opposite to each other, with the creek between them; and near the E. limit is Church Hill, which is also a commanding eminence. Over these elevated grounds, and the valley between them, declining towards the river, the

streets and buildings of the city are spread. The streets mostly cross each other at right angles, and are most commonly 65 ft. in width. Near the brow of Shockoe Hill which is an elevated plain, and a favorite place of residence, is Capitol Square, a beautiful public ground, containing abt. 9 acres, surrounded by a handsome iron railing, ornamented with gravel walks, and shaded with a variety of trees. In the centre stands the State house, which is remarkable for its commanding position, and its chaste yet beautiful proportions. It is a Greco-Composite building, adorned with a portico of Ionic columns, the plan having been furnished by Thomas Jefferson after that of the Maison Carrée at Nîmes, in France. The view from the platform on the roof is extensive and beautiful. In an open hall, in the centre of the building within, is placed the celebrated marble statue of Washington, by Houdon, which was erected in 1788, during the lifetime of Washington. On the E. Capitol Square are also the governor's mansion, a bronze equestrian statue of Washington, a marble statue of Henry Clay, and Foley's statue of Gen. "Stonewall" Jackson. Richmond has a fine system of public free schools, including a high school. Private schools for both sexes are also numerous, including Richmond college for males and Richmond female institute for girls and young ladies. The medical college of Va. was established in 1851. The Roman Catholics have several excellent schools under their control, and for the higher education of the colored people there are the Richmond normal school and the Colver theological institute. The city has 52 churches. Besides the State central lunatic asylum (for colored insane), and the city almshouse, there are a number of orphan asylums, homes, etc., sustained by the various denominations and private charity. The State penitentiary is also here. The city has an excellent police, and its efficient fire department has 5 steam engines. The city owns and operates its own gas and water-works. The water power afforded by the falls is immense and easily utilized, but comparatively little of it has yet been taken advantage of. The falls of James R. afford immense water power. Vessels drawing 16 ft. can ascend to within a mile of the centre of the city, at a place called Rocketts, and those of 18 ft. draught to Warwick, 3 m. below. A canal has been built around the falls, and above them there is navigation for over 200 m. Improvements are in progress in the river, which are expected to render the docks accessible by vessels drawing 19 ft. The James R. and Kanawha canal extend to Buchanan, 195 m. Regular lines of steamers run to Norfolk, Baltimore, Philadelphia, and New York. Richmond had in 1880 702 manuf. establishments, employing 16,932 hands; and the sale of their products amounted to \$24,705,083. The manuf. included iron-works, machine shops, foundries, sugar refineries, cigar factories, coach and wagon factories, furniture, sheetings and shirtings, and stoneware. The value of its foreign commerce for the year 1882 was as follows: imports, \$125,607; exports, \$1,685,311. The number of entrances was 28 of 3,378 tons; clearances, 81 of 37,651 tons. Number of vessels belonging to the district, 59 of 6,468. In 1882 there were 4 nat., 5 State and 8 private banks, 40 newspapers and periodicals, of which 5 were daily.— Richmond was founded in 1737, was incorporated in 1742, and became the State cap. in 1779, at which period it was a small village. In 1861 it was made the capital of the Southern confederacy; and one of the great aims of the federal authorities, throughout the war, was to reduce it into their possession. The obstinacy with which the confederates defended it was a proof of the great importance they attached to its retention. When General Lee evacuated Petersburg, April 2, 1865, the troops defending Richmond on the E. were withdrawn, and

to prevent the tobacco warehouses and public stores from falling into the hands of the federal forces, the buildings—together with the bridges over James R.—were fired. This resulted in the destruction of a large part of the business section of the city, the number of buildings destroyed having been estimated at 1,000, and the loss at \$8,000,000. With the cessation of hostilities, Richmond set to work to rebuild her blackened quarters, which she has now almost wholly accomplished, and the city is rapidly surpassing its former prosperity. Pop. in 1790, 3,761; in 1830, 16,060; in 1860, 37,910; in 1870, 51,038; in 1880, 63,803.

Rio Grande, RIO GRANDE DEL NORTE, or RIO BRAVO DEL NORTE, a large river which rises in the S.W. part of Colorado, in the San Juan Mts., in abt. lat. 37° 40' N., and lat. 107° 30' W., near Rio Grande Pyramid, a mountain abt. 13,700 ft. high, remarkable for its nearly regular pyramidal form. The river flows E. for abt. 150 m. then bends abruptly S. entering New Mexico, between the Sierra Madre and the main chain of the Rocky Mts., and flows through that territory to the Mexican border; thence it pursues a general S.E. course, separating Texas from Mexico, to the Gulf of Mexico, which it enters in abt. lat. 26° N. Its entire length is estimated at 1,800 m. The upper part of its course is obstructed by rocky ledges and cataraets, and the lower part by sand banks and numerous wooded islands; but small steamers have

ascended to Kingsbury's rapids, abt. 450 m. from the sea. The Rio Grande is subject to periodical floods, which commence in April, are at their greatest height in the beginning of May, and fall toward the end of June. For the greater part of the year it is fordable almost everywhere above the influence of the tide. The only important tributary is the Rio Pecos. Both the Rio Grande and the Pecos flow for the most part through an arid region; but their valleys, which are generally from 1 to 4 m. wide, that of the Rio Grande expanding in places to 10 or 15 m. are productive when irrigated.

Rochester, N. Y., city, port of entry, and cap. of Monroe co., is situated on both sides of the Genesee R., 7 m. S. from its entrance into Lake Ontario, on the Erie Canal and on the N.Y. C.&H.R., the N.Y., L.E.&W., the R.&L.O., and the R.&P.R.Rs., 250 m. W.N.W. of Albany and 69 m. E. by N. of Buffalo, by rail. The Erie Canal crosses the Genesee by an aqueduct of cut stone, built at an expense of \$600,000, and the Genesee Valley Canal, a tributary to the Erie, has its N. terminus here. The city is regularly laid out with wide and handsome streets, of which many are lined with shade trees. Within the city limits the Genesee undergoes a descent of 268 ft., falling in 3 distinct cataracts within the distance of 2 m. These cataracts evidently formed at one time a single cascade, but the different degrees of hardness of the several rocks have caused an unequal retrograde movement of the falls, until they have assumed their present position. At the Upper Falls, the water descends 96 ft. over the perpendicular face of Niagara limestone, underlaid by shale. Below it, the river flows between nearly perpendicular walls abt. 1½ m. to the Middle Falls, where it has a descent of 25 ft. One hundred rods below, it descends 84 ft. at the Lower Falls, over a ledge of Medina sandstone to the level of Lake Ontario. The magnificent water-power thus afforded, located in the midst of one of the finest wheat growing regions in the world, in connection with the facilities of transportation afforded by the Erie Canal, Lake Ontario, and the railways, have given a powerful impulse to the prosperity of the place, and it has become one of the most important manuf. cities in the State. In earlier years, flour was the chief prod., and although now dwarfed by other branches, it is still of great importance, there being 18 mills, grinding annually, with 75 run of stone, 2,500,000 bush. of wheat. The manuf. interests of Rochester are both immense and diversified. Ready-made clothing is by far the largest manuf.; boots and shoes rank next. The other leading branches of industry are India rubber goods, iron bridges, flour barrels, breweries, tobacco factories, cigar making, carriages, furniture, optical instruments, perfumery, steam-engines, blast-furnaces, fruit-canning, glassware, bank locks, agricultural machinery, &c. The greatest nurseries of America are here. Thousands of acres, within five mile of the city, are devoted to the culture of fruit trees, and millions of trees are annually sent abroad to other States and foreign lands. The annual product of these nurseries is \$2,000,000. The direct foreign commerce of Rochester is with Canada. The exports at the port of Genesee for the year 1882, were valued at \$362,531; imports, \$753,236. The city is becoming a great distributing centre for coal, which is loaded from railroads on the banks of the river directly into vessels, which convey it to all points on the lakes in yearly increasing quantities. The business centre of the fertile Genesee Valley, Rochester, exhibits a steady growth in business and wealth, which has never been seriously checked since its foundation. A magnificent system of water-works has recently been constructed at a cost of \$3,250,000, with two sources of supply—one from the river, the water being forced through 8 m. of mains in the business centre by the Holly system, and is used for sup-

pressing fires and running light machinery; the other is from Hemlock Lake, 29 m. S. and 400 ft. above the city. There is a receiving reservoir of 85,000,000 gallons capacity, and a distributing reservoir of 45,000,000 gallons, sending water through 60 m. of mains. The two systems can be connected in case of accident to either, and thus a certain supply is guaranteed. The pressure on the mains is such as to throw from the hydrants a stream 130 ft. perpendicularly, and no city is more perfectly guarded from fire. At the corner of W. Main and State sts. are the Powers buildings, a tubular block of stores, built of stone, glass and iron, 7 stories high. In the upper halls is a fine collection of paintings, and on the top is a tower from which may be obtained a fine view of the city and its surroundings. Near it is the Arcade, roofed over with glass, and containing numerous shops. Nearly opposite is the county court-house, in which is the atheneum with a library of 20,000 volumes. Back of the court-house is the city hall, a handsome building of gray limestone, 138 by 80 ft., with a tower 175 ft. high. The most ornate business block in the city is the Rochester savings bank, cor. W. Main and Fitzhugh sts. The finest church edifices are the First Baptist, the First Presbyterian, and St. Patrick's Cathedral (Roman Catholic). There are twelve spacious parks, and four elegant bridges over the Genesee. The university of the city of Rochester is located on a tract of twelve acres, just E. of the city limits. It was founded by the Baptists in 1850, and has a valuable library, and fine mineralogical cabinet. Connected with it is the Baptist theological seminary. This has a German department, and a library of 15,000 volumes. The Western house of refuge, a State reform school for vicious boys, is a large and imposing edifice, abt. 1 m. N. of the centre of the city, containing usually abt. 400 inmates. There are two large hospitals, St. Mary's, under the management of the Sisters of Charity, the other a city institution. Mount Hope cemetery is located in Brighton, near the S. line of the city, on Mount Hope, a beautiful eminence overlooking the city. It is laid out in excellent taste, and is one of the finest rural cemeteries in the country. In 1882, the city had 3 nat., 2 State, and 4 savings banks, 34 newspapers and periodicals, of which 6 were daily. Rochester was first settled in 1810, and was incorporated as a city in 1834. Pop. in 1820, 1,502; in 1840, 20,191; in 1860, 48,204; in 1870, 62,386; in 1880, 89,363.

Rocky Mountains. Along the whole of the Western side of North America, from near the mouth of the Mackenzie in the Arctic Ocean, and from Alaska on the Pacific shore, to the Isthmus of Nicaragua and Panama, that is, across 60° of lat. from N. to S., extends with a grand double curve the continuous length of the Rocky Mts., and others which prolong the line, having a position in North America similar to that of the Andes in South America, and shutting off, in some parts, a comparatively narrow portion of the continent, with the Pacific shore, from the great

central plain. But several minor ranges, branching off or confronting the principal mountain ridge or backbone of North America, enclose large spaces of a table-land, traversed by the Columbia, the Fraser, and the Colorado Rs., with those which join them, and holding the Great Salt Lake of Utah in its central basin. The Cascade Mts. of Washington and Oregon, the Sierra Nevada of California, and the Coast Range prolonged through the Californian peninsula, have a general direction from N. to S.; while the Wahsatch, the Humboldt, the Blue Mts., the Salmon R., and other ranges, stand rather across the table-land, or obliquely, from W. to E. It may be convenient to speak of the former series, regarded altogether, as the general Pacific Coast Range, which we also observe to be continued northward, with some intervals, beyond lat. 60° N., to the peninsula of Alaska, presenting summits of increased height, that of Mount St. Elias being above 17,000 ft., and Mount Fairweather nearly 15,000 ft. In the Cascade Range are Mount St. Helens, N. of the Columbia R., attaining an elevation of 15,750 ft.; Mount Hood and Mount Jefferson, abt. 15,500 ft. The Sierra Nevada, at its northern extremity, where it forms an acute angle with the Coast Range, displays the lofty terminal peak of Mount Shasta, having an altitude of 14,400 ft. The minor California Coast range nowhere rises to 4,000 ft. The main Cordillera or spine of Western North America, which in the British Dominion and in the U. States territory is called the Rocky Mts., but which takes the name of the Sierra Madre in Mexico, and in the isthmus, farther S., is split into two lower groups of a volcanic character, attains the height of 16,000 ft. in Mount Brown, and 15,700 ft. in Mount Hooker, both near the 54th degree of lat., above the source of the Saskatchewan R.; but Fremont, in the Wind R. group, between Oregon and Nebraska, is 13,560 ft. high, and there are peaks of 10,000 ft. or 12,000 ft. in Utah and New Mexico. The highest mountains, however, in North America, excelling even Mount St. Elias, belong to a volcanic series which crosses the table-land of Southern Mexico from W. to E., and of which the culminating points are Popocateptl, 17,884 ft., and Orizaba, 17,373 ft.; while Agua, in Guatemala, rises to 13,000 ft. Thus we may remark, at each extremity of the Cordillera, at its N. end, towards Alaska, and at its S. end, in Central America, it is encountered by a cluster of volcanoes, Mount St. Elias being one of this description, which exceed the height of the Rocky Mts. The spaces enclosed between the main trunk and branches of this immense system of mountains are several hundred miles wide, and their surface is elevated 5,000 ft. or 6,000 ft. above the sea-level, as in the Utah Lake basin, the Nevada territory, and the plateau of Anahuac, or Southern Mexico, which last has an elevation of 6,000 ft. to 8,000 ft., and has therefore, a temperate climate within the tropics.—In the U. States, the Pacific slope is drained by rivers which flow into the Pacific Ocean. It embraces the greater part of California, all of Oregon, and a part of Washington, Idaho, Nevada, Utah, Colorado, Wyoming, New Mexico and Arizona. It forms three separate divisions, the Northern, Southern and Western. The Northern division embraces the section N. of the great inland basin, between the Rocky Mts. and the Cascade Range. This entire region is a table-land with an average elevation of from 2,500 to 3,000 ft. above the sea, and it is traversed by many broken mountain ridges. It is a region of general sterility, with the exception of some valleys where the soil is better constituted for fertility and the rains are more abundant; but even these oases are better adapted for grazing than for agriculture. The Southern division includes the country lying between the Wahsatch and Rocky Mts., which is drained by rivers flowing into the Gulf of California. It is in general a table-

land, with an average elevation of abt. 4,000 ft. above sea level, and it is traversed, like the northern division, by many broken mountain ranges. The Western division embraces the country between this chain and the Cascade Range and Sierra Nevada. This is a region 1,200 m. in length by 120 m. in breadth, containing an area of 144,000 sq. m. It is well watered and exceedingly fertile. In the S. part of this division, so extraordinary are the prolific influences of the soil and climate, that the grasses, trees, fruit, and grains attain a very remarkable development. The principal rivers of the Pacific slope are the Colorado, the Columbia, and the Sacramento. The Colorado is one of the most remarkable rivers in the world. Rising from numerous sources ten or twelve thousand feet above the level of the sea, on the W. side of the Rocky Mts., this great river descends into the plateau of the same name, through which it has worn its present wondrous channel, the walls of which sink down perpendicularly from the edge of the table-land for a distance of more than 300 m. The distance from the top of the bank to the surface of the river varies from 1,000 to 6,000 ft. The most remarkable part of its course is the Big Cañon, which is in the N.W. corner of Arizona, and begins at the mouth of the Diamond R., abt. 35 m. from Yamais Village. At this point its walls have an altitude of 3,000 ft., but a few miles farther eastward the table-land rises to the altitude of more than 7,000 ft. above the sea, and the vast cliffs of the cañon tower to the height of more than a mile above the stream. The Columbia has its source in the Rocky Mts., and plunging from these lofty ranges in cataracts and rapids through cañons more than 1,000 ft. in height enters the Pacific after a course of 1,200 m. The passage of the Columbia R. through the Cascade Mts., which is known as "The Cascades," is a scene of great grandeur and beauty. The Sacramento and its tributary, the San Joaquin, drain one of the richest countries in the world, viz., the famous gold-producing valleys of California. The high ranges of Colorado extend N. into Wyoming, but they are all of much less altitude than in Colorado. The Laramie Range has an elevation of abt. 9,000 ft. It is crossed by the U.P.R.R. at Sherman, 8,269 ft. The Medicine Bow Range, which is an offshoot from the Front Range, has abt. the same elevation as the Laramie Range. Between them lie the beautiful Plains of Laramie. The Park Range is the third and last of the series. Beyond these, the country consists of a series of high, cold, desert plateaux. The first swell in this plateau, beyond the North Platte, separates the waters of the Atlantic from those of the Pacific, the Platte R. from the Green. Thence the country descends to the Green R. basin, the arid valley upon which that fugitive name "Great American Desert" has finally been bestowed, and where it will probably remain. A second rise of the plateau separates the waters of the Pacific from those of the Great Basin, the Green R. from the Bear. These divides are broad and flat, the water partings are ill defined, and they contain numerous salt lakes without outlets, and streams which flow nowhere. The great system of ranges known as the Rocky Mts. is composed of two sections, separated by this great extent of plateaux, stretching N.W. and S.E. for 200 m. The trans-continental traveler on the U.P.R.R., crosses this great depression between the ranges, and sees little or nothing of the Rocky Mts. Toward the N. part of Wyoming, the mountain system suddenly starts again into being, with a great breadth of alternate mountain and valley. On the E., the Big Horn Range rises from the plains to a height of 12,000 ft. above the sea-level. Then follow the Big Horn basin and the valley of Wind R., upon which from the lofty, snow-capped peaks of the Wind R. Range, with their glaciers and eternal snow, and the rugged, volcanic peaks of the

Yellowstone Range. W. of the former lies the upper part of the Green R. basin, at whose head are the Gros Ventre and other mountains and hills abt. the head of the Snake R. Here the country is all on edge. There is but little valley country. Excepting Jackson's Hole, a valley at the base of the Tetons, the valleys are mere gorges and cañons. Beyond the Yellowstone Range, which marks roughly the eastern boundary of the Yellowstone Park (which see), the country is mainly a high plateau, abt. 8,000 ft. above sea-level, densely timbered and abundantly watered.—The Great Inland basin, sometimes called "Fremont's Basin," embraces nearly all of Nevada and parts of Oregon, California, Idaho and Utah. This singular region is a plateau with an average elevation of 5,000 ft. above the level of the sea, surrounded by rugged mountains. It is a dreary, desolate country, abounding in salt lakes and alkaline springs, and it has a system of lakes and rivers of its own, having no connection with the ocean. Great Salt Lake is almost saturated with salt, the amount of saline matter being so large that no living thing can exist in it. Utah Lake, a beautiful sheet of pure fresh water, communicates with Great Salt Lake through the river Jordan. The longest river in the Great Inland Basin is the Humboldt R., which empties into Humboldt Lake, called its "sink," because there is no outlet. This river is 350 m. long, but is in no place larger than a mill-stream.—The basin of the Red R. of the N. embraces a part of Minnesota and Dakota. The Missouri R. cuts Dakota into nearly equal parts. E. of the river the country consists mainly of elevated table-lands, the Coteaus du Missouri et des Prairies. The former, which is the most western, comes down in a longue tongue from the British possessions, occupying the space between the Missouri and the James Rs. On the N., it is slightly above 2,000 ft. above the sea, with a gradual descent southward. Its surface is somewhat uneven and broken, with numerous "sinks" and ponds of alkaline water. Vegetation is scanty; and of timber there is practically none. The other plateau lies E. of the James R., extending over into Western Minnesota. Its elevation is slightly less than that of the Missouri Coteau; but its surface resembles very closely that of the latter in its sinks and alkaline lakes. In general, these coteaus are limited sharply by lines of bluffs. In the N.E., the Coteau des Prairies breaks down to the valley of the Red R. of the North, so called to distinguish it from the Red R. of Louisiana. This valley has become, of late, one of the greatest wheat-producing regions of the N.W. Southward the coteau sinks gradually to the fertile country near the Missouri. W. of that river, the country as a whole assumes a more forbidding aspect. On the lower course of the Little Missouri and the Lower Yellowstone, much of the country is what is known as "Bad Lands." This is the worst section. Aside from it, the whole region resembles the rest of the Great Plains, of which it forms a part. The surface is level or gently rolling. The vegetation is mainly bunch grass. As we progress southeastward, however, beyond the Cheyenne, we detect a marked amelioration in the vegetation, consequent upon reaching a less arid climate. The Niobrara has considerable large timber along its course; and the grasses grow much more luxuriantly in this neighborhood. The Black Hills, the only group of mountains in Dakota, lie within, and closely embraced by the two forks of the Cheyenne R. This group has an elliptic shape, its longer axis lying N.W. and S.E. Its highest peaks range between 6,000 and 7,000 ft. above sea-level. Its core is of granite, around which the sedimentary formations are arranged in concentric ellipses, forming long and beautifully curved "hogbacks," between which are beautiful valleys carpeted with luxuriant grasses and gay with flowers. For many years

it had been a current tradition that there was gold in the Black Hills; but this report did not assume tangible form until 1874, when some miners connected with Gen. Custer's expedition found gold in placers, in paying quantities. The U. States army attempted to stop the rush that ensued, upon the ground that the hills were a part of the Sioux reservation; and for a time they succeeded in keeping the miners off. This attempt was soon abandoned, and the hills given over to the miners. The first discoveries of gold were in placers, which were speedily worked out. Then followed, in due course, the discovery of the *somrees* of the placers, which are now yielding largely and steadily. The mines of the Black Hills produce gold only. In form the deposits are true fissure veins. The ore is native gold, in quartz, and is, in most mines, of a very low grade. This is compensated for by the great breadth of the veins and the fact that the ore can be worked in stamp mills, and does not require smelting. Mining the ore is very cheap thus far, as few mines have got to any great depth below the surface, and it is simply a question of quarrying. The total production of this section in 1880 was \$4,123,081.

m. W. by N. from Albany, and 39 m. E. of Syracuse. It is built upon a level plot of ground at the head of Mohawk Valley, and is laid out with wide streets, well shaded with maples and elms. Public and private parks and fountains add to its beauty, and pure water is obtained from the Mohawk by the reservoir and direct pumping system combined. The city contains abt. 15 churches, a public library, a free academy, excellent schools, 4 nat. and 2 other banks, 3 wkly papers, and the Central New York institution for deaf mutes. Rome is the centre of the dairy interest, the cheese-factory system having originated here. Its manuf. embrace puddled and railroad iron, merchant iron, locomotives, railroad rolling-stock, knit goods, lumber, builders' wood-work, fishing tackle, agricultural implements, and patent medicines. Sacomango River, N.Y., rises in Warren co., and enters the Hudson R. in Fulton co.

Sacondaga River, N.Y., rises in several small lakes in Hamilton co., of which the largest are Piseco, Round, and Pleasant Lakes. The river then flows in a winding E. direction through the N.E. corner of Fulton co., and enters the Hudson, opposite the v. of Luzerne, Saratoga co.

Saco River, N.H. and Me., is one of the largest in New England, yet, being much broken in its course by falls, is not navigable to any considerable extent. It rises in the White Mts., in Coos co., N.H., and formed by the junction of 3 principal branches at Bartlett, Carroll co. It flows S.E. until it enters Me., then makes an abrupt turn N. and again pursues a S.E. direction through that State to the ocean below Saco. Total length, abt. 160 m. The main branch passes through the noted Notch of the White Mts. Its falls afford valuable water-power. The principal of them are the Great Falls, at Hiram, 72 ft.; Steep Falls, at Limington, 20 ft.; Sabnon Falls, at Hollis and Buxton, 30 ft.; and Saco Falls, 42 ft. This last fall is abt. 4 m. from the mouth of the river, and is at the head of tide water. The river has an ordinary rise in the spring of from 6 to 15 ft., but it has frequently

very far exceeded that height, causing destructive inundations.

Sacramento, Cal., a river rises in Lassen co., flows W. then S., and empties into Saisun Bay on the line between Contra Costa and Solano cos., after a total course of abt. 500 m. Its upper portion is called Pitt R., the name Sacramento being often given to a comparatively small branch which rises S. of Mount Shasta. The principal branches are Feather, American and Mokelumne Rs. Its broad and fertile valley is a northward continuation of that of the San Joaquin. The stream is navigable from its mouth some 50 m. and by small vessels to Red Bluffs, 320 m. in good stages of water.

—a central co., bordering N. on American R., S. on Calaveras and San Joaquin Rs., and W. on the Sacramento, and intersected by the Mokelumne and Cosumnes Rs.; area, 1,000 sq. m. It has a diversified surface, nearly level in the W. and hilly toward the E., and the soil is generally fertile. The E. portion contains deposits of gold. The chief prod. in 1880 were 804,631 bush. of wheat, 650,448 of barley, 149,550 of corn, and 22,745 of oats; wool, butter, hops, potatoes, wine, and cheese are also largely produced. Cap., Sacramento. Val. of taxable prop. abt. \$45,000,000. Pop. 34,391 (of whom 12,494 for., 14 Indians, 573 colored, and 4,878 Chinese).

—a city, cap. of the State, and also of the above co., the second city in the State in pop. and importance, on C.P. and S.&P.R.Rs., 90 m. E.N.E. San Francisco. It is situated in an extensive and lovely plain on the E. bank of the Sacramento R., here spanned by a fine bridge, immediately S. of the mouth of the American R., and is one of the handsomest cities W. of the Rocky Mts. The streets are wide and straight, and cross each other at right angles. Those running E. and W. are named by the letters of the alphabet; those crossing them N. and S. are numbered. The shops and stores are mostly of brick, the dwellings mostly of wood and surrounded by gardens. Shade trees are abundant. The streets in the business portion are paved with Nicolson pavement and cobblestones. The city is supplied with gas, and water is pumped up from the Sacramento R. and distributed through the streets in pipes. The climate is semi-tropical, and a luxuriant growth of flowers and shrubs may be seen in the open air at all times of the year. The only important public building is the State capitol, one of the finest structures of the kind in the U. States. It is situated almost in the heart of the city, and the grounds cover 18 blocks, beautifully laid out with trees, shrubs, and flowers. Steamers run to San Francisco, Marysville, and various points on the Sacramento R. There are various factories. The machine, repair and car shops of the C.P.R.R. employ from 1,000 to 1,500 hands. Sacramento has 1 nat. and 3 other banks, 3 daily and 6 wkly papers, 17 public schools, a female college, a normal school, a Roman Catholic college, a conventual school, under the charge of the Sisters of Mercy, and a number of private schools. The State library in the capitol has more than 35,000 volumes, and the Sacramento library, in a fine building belonging to the association, abt. 7,000. The State agricultural society has ample accommodations for the exhibition of stock and one of the finest race courses in the world. It holds a fair annually about the middle of September. Sacramento was first settled in 1839, and was then called New Helvetia; it became cap. of the State in 1854, and was incorporated as a city in 1863. Pop. 21,420.

Saguache (sa-woch), *Col.*, a range of the Rocky Mts., also called Sierra Madre, and National range, divides through nearly its whole extent the waters of the Atlantic from those of the Pacific. It is parallel with and about 16 m. W. of the Park range terminating some 40 m. N.W. Mt. Lincoln in the Mount of the Holy Cross, 13,400 ft. high. The highest part of this range commences in Grand Mt., abt. 14,200 ft. above the sea, 20 m. S. of the Holy Cross, whence for 50 m. further S. the whole range is 13,000 ft. high, with 10 peaks rising at intervals of from 2 to 8 m. to a height of from 14,000 to 14,400 ft. Among the principal summits are Mts. Antoro (14,245 ft.), Massick (14,368 ft.), Elbert (14,326 ft.), La Plata (14,302 ft.), Harvard (14,385 ft.), Ouray (14,043 ft.) and Princeton (14,199 ft.) and Yale.

—a river rises among the Cochetopa Hills, near San Luis Peak, Saguache co., flows N.E. and then S.E. through the N. part of San Luis Park, and empties into San Luis Park, a swamp abt. 10 m. wide and 30 m. long, which receives several considerable streams and however has no visible outlet.

St. Augustine (aw'gus-tin), Fla., city, port of entry, on the Atlantic coast, and cap. of St. John's co., on St. J. & L. E. R.R., 33 m. S.S.E. Janesville. The city stands back abt. 2 m. from the coast on the side of a peninsula, and is shielded from the force of the main ocean by Anastasia Island, which lies before it, but is so low and narrow as not to intercept the sea breezes. On the N. end of that island is a revolving light, lat. 29° 53' N., lon. 91° 16' W. The site of St. Augustine is itself low, being not over 12 ft. above the level of the ocean; and the soil is rich in calcareous and vegetable deposits. The climate here is reckoned equally mild and grateful with that of Italy or the S. of France. There are only one or two months in the year when frosts are ever experienced, and the winters are sometimes passed entirely without them. In the summer, too, the alternation of sea and land breezes both tempers the heats by day and renders the nights generally cool and pleasant. This is, therefore a favorite resort for invalids seeking to avoid the more variable and rugged climate of the north. The city lies in the form of a parallelogram, 1 m. long and $\frac{3}{4}$ m. wide, fronting E. on Matanzas Sound, which spreads $\frac{1}{2}$ m. before it, forming a harbor, protected by Anastasia Island, of large capacity and of perfect security. Not more than one-half the extent of the city is compactly built, and much of this has yet an antiquated appearance. St. Augustine, indeed, is the oldest city in the U. States, having been settled by the Spaniards 43 years earlier than Jamestown, in Virginia, by the English. The streets are generally very narrow, some not more than 10 ft. wide, and the principal ones not more than 15 to 18 ft. in width, and sometimes very crooked. The houses in the compact part of the city, are on a line with the street, and are generally two stories high, with the second story projecting over the first. Until within a few years the only material used in building was the coquina rock, a conglomerate of small sea shells, quarried on Anastasia Island and dried hard in the sun. In the E. part is a fine large square, opening from the sound, on three sides of which are the court-house, a splendid Roman Catholic Church, an Episcopal Church, a neat Gothic edifice, and several elegant residences. The barracks are among the finest and most complete in the country. The old Spanish Castle of St. Mark, now Fort Marion, is quite an object of curiosity. It is of coquina, is well preserved, and will accommodate a garrison of 1,000 men. The city is embosomed in orange, lemon, olive, and palm trees, which grow here in great perfection, and which give to the place a rural rather than a commercial appearance. The chief business is the manuf. of "palmetto straw" work, which is largely shipped to the north. Two lines of sailing packets run to New York. Pop. 2,293.

St. John, Me., a river, which rises, under the name of the S.W. branch, in the highlands that separate Me. from Quebec, Canada, at the Metjarmette portage. It is for nearly 40 m. the boundary between the U. States and Canada. It then traverses for 112 m. the wilds of Northern Me. and is known as the

Walloostook Main, or St. John. Some 150 m. below its origin it joins with the St. Francis, and changes its N.E. to a more E. course. Below the mouth of the St. Francis it is the N. boundary of Me. for abt. 75 m. Below this part of its course it is wholly in Canadian territory; shortly after entering which its Grand Falls occur, 225 m. above its mouth. The river here falls 75 ft. perpendicularly. From its mouth at St. John, New Brunswick, it is navigable by large steamers for 80 m. to Fredericton, and at high water to Woodstock, 145 m. and by small steamboats, at good stages of water, even as high as the Grand Falls, above which it is again navigable some 40 m. The total length of the river is 550 m. Its navigation is free to U. States citizens by the Ashburton Treaty. —a plantation of Aroostook co. Pop. 166.

St. Lawrence, a great river forming the outlet of the chain of lakes, or inland seas, lying between the U. States and Canada. It may be considered as descending from Lake Superior, and passing through Lakes Huron, Erie, and Ontario, to the Gulf of St. Lawrence, a distance of 2,000 m.; draining an area, of over 500,000 sq. m. in extent. Its course through the centre of these lakes and below, until it crosses

45° N. lat., forms the boundary between the U. States and Canada. After crossing 45° lat., the course of this majestic river is wholly within the territory of Canada. In the upper part of its course it loses its character as a river, when passing through the lakes; and even when it passes from lake to lake, connecting and bearing along their waters, it is known by different names in different sections; as the St. Mary's between Superior and Huron; the St. Clair and the Detroit between Huron and Erie, having the small lake St. Clair in the intermediate course; and the Niagara between Erie and Ontario. From Lake Ontario to Montreal it is sometimes called the Iroquois, though it is more commonly known as the St. Lawrence proper, from the outlet of Lake Ontario to its mouth. Below Montreal the river varies in breadth from $\frac{1}{2}$ m. to 3 m. and it passes through the Lake St. Peter, 50 m. below Montreal, which is from 12 to 15 m. wide. Below Quebec the river increases rapidly in width, until it enters the gulf by a mouth nearly 100 m. across. Its average fall is about six inches to the mile, although this is very unequally distributed, on account of the numerous rapids, and one stupendous cataract in its course. It receives many tributaries, the most important of which, on the S. side, is the Richelieu, which is the outlet of Lake Champlain, entering at the head of Lake St. Peter; and, on the N. the Saguenay, 140 m. below Quebec; and the Ottawa, or Grand R. which enters it a little above Montreal. The St. Lawrence, with the chain of lakes which empty their waters through its channel into the N. Atlantic, constitutes one of the great commercial thoroughfares of the North American continent. It is navigable by sea-going vessels to Montreal. Above that city its navigation is impeded by rapids, of which the Cedar and Lachine are the most considerable. The inclination of these rapids is so regular, that steamboats drawing 7 ft. of water can descend the river safely; and for the purpose of obviating the difficulty of ascent (Lake Ontario being 231 ft. above the ocean level according to former measurements, and according to J. T. Gardner's recent calculations several feet higher), seven different canals have been constructed, of an aggregate length of 41 m. which will admit the passage of vessels of 1,000 tons. A canal has also been constructed from Lake Ontario to Lake Erie, called the Welland Canal, 28 m. in length, and having capacity to pass a vessel of 500 tons burden. There is also a ship canal of large size around the falls of St. Mary, between Lake Huron and Lake Superior. A vessel of 500 tons may load from the mouth of the St. Louis river at Duluth, Minn., or from Chicago, and, without breaking bulk, pass down the St. Lawrence to any port in the world.

St. Paul, Minn., a city and port of delivery, cap. of the State and of Ramsey co., on both sides of the Mississippi R., 2,200 m. from its mouth, 8 m. in a direct line S.E. of the falls of St. Anthony, and 350 m. N.W. Chicago. It was formerly confined to the left bank, the site embracing four distinct terraces, forming a natural amphitheatre with a southern exposure, and conforming to the curve of the river, which, here flowing N.E. by an abrupt circular sweep takes a S.E. course. The city is built principally upon the second and third terraces which widen into level semi-circular plains, the last, abt. 90 ft. above the river, being underlaid with a stratum of blue limestone from 12 to 20 ft. thick, of which many of the buildings are constructed. St. Paul is the centre of 11 railroads over which arrives and departs abt. 100 trains daily. The main lines are the C., M. & St. P., the C., St. P., M. & O., the N. P., the St. P., M. & M., and the St. P. & D. R.R.s. There are 13 school buildings, a fine high school, 2 female seminaries of a high order, several private schools, while the Roman Catholics have parochial schools with over 2,000 scholars. The city contains 38 churches, 2 theatre buildings, 3 public libraries, ranging from 7,000 to 10,000 vols. each, an academy of natural sciences, and 5 daily, 6 wkly and 2 monthly papers. St. Paul is supplied with water from a large and beautiful lake on the high land back of its site. It is lit with gas, and has an admirable system of sewerage. It has a well-managed police force and an efficient, paid fire department. There are 3 nat., 1 saving, and 3 other banks, and a Clearing-House association, 2 orphan asylums, 3 hospitals, a house for the friendless, 2 Magdalen reformatories, and the State reform school is located on the edge of the city. The U. States has a granite custom-house and post-office building costing \$350,000, in which the federal courts are held. The State capitol, built in 1853 and subsequently enlarged, is small and plain. There are 2 extensive grain-elevators, a number of wholesale houses, many fine business-blocks, hotels, &c. Manuf., agricultural implements, machinery, furniture, boots and shoes, &c. St. Paul is the practical head of navigation of the Mississippi R., 5 m. below the mouth of the Minnesota, its most northern navigable tributary. An average of 90 steamboats and 100 barges trade with this port. The average length of the season of navigation is 7½ months. Pop. in 1860, 10,401; in 1870, 20,830; in 1880, 41,498.

Salem, *Mass.*, a city ✦ and port of entry, and one of the caps. of Essex co., on B., L. & C. and E. R.R.s., 16 m. N.E. Boston. It is nearly surrounded by water, being situated between 2 inlets of the sea, called the North and South Rs. To the main and now inhabited part of the town is attached a peninsula portion of land, called the Neck. This was the first inhabited, and is now occupied as the Almshouse Farm. Salem was formerly noted as one of the leading commercial cities of America, carrying on more trade with the East Indies at one period than all other American ports combined. Though its harbor is safe and convenient, it is not of sufficient depth for vessels of the largest class, and this first led to the withdrawal of its commerce to Boston and New York. It has now very little foreign commerce, but a large coasting trade, and it is a point of shipment for large quantities of coal landed here in vessels and sent to the interior by rail. Manuf. is a prominent interest, and is increasing. The leading industry is the manuf. of leather, but in addition there are a successful cotton company, 2 lead-mills, 1 or 2 jute-factories, 7 nat. and 1 other bank, 1 daily, 2 semi-wkly, 4 wkly, and 2 monthly papers, and a large number of machine-shops and small industries. It is an important centre of retail trade. Salem has many interesting old houses, and its general appearance is attractive. It is divided into 6 wards, and has an efficient police force and a good fire department. The streets are lighted with gas, and water is supplied by an aqueduct from Wenham Lake, 4 m. distant. Besides the almshouse and small-pox hospital, there are an orphan asylum, a dispensary, a reform school for boys, and several charitable societies. There are a high school, five grammar and twelve primary schools, two evening schools, two drawing schools, and a special school for factory operatives and others unable to pursue the regular course. One of the State normal schools (for females) is here. Among the principal public institutions is the East India marine society, organized in 1799, and formed of those who, as captains or supercargoes, have doubled Cape Horn or the cape of Good Hope. The museum of this society is one of the most interesting and valuable in the country. The Essex institute, organized in 1848, besides its extensive cabinet of natural history, has a library of 30,000 volumes, a large collection of portraits, and many historical and other relics. The Salem Athenæum, formed in 1810, has a library of 15,500 volumes. The office of the permanent secretary of the American association for the advancement of science, organized in 1848, is in the East India marine hall, and contains a small and select scientific library. The charitable mechanical association, organized in 1817, has a library of 4,000 volumes. Other important associations are the marine society, instituted in 1766; the lyceum, in 1830; the young men's union in 1855; and the young men's Christian association, in 1858. Salem is after Plymouth the oldest town in Mass. It was settled in 1628, and became a city in 1836. In 1692 the famous witchcraft delusion made its appearance here, and 19 persons from this and adjacent towns were executed on the eminence now known as Gallows Hill. Pop. 27,598.

W. of Houston by G.,H.&S.A.R.R., 81 m. S.W. Austin, and 154 m. N.E. Laredo by I.R.R. San Antonio was the cap. of Texas under the Spanish and Mexican governments, and one of the oldest settlements in the State. It consists of 3 parts; the old town, or San Antonio proper, between the two streams; Alamo, E. of the San Antonio; and Chihuahua, W. of the San Pedro. The old town is the business quarter, and has in great part lost its Mexican character, having been almost entirely rebuilt since 1860. Chihuahua is almost exclusively Mexican in character and population. The houses are one story high, partly built of stone and partly of upright logs with cane roofs. Alamo, is the largest quarter of the city, is considerably higher than the other two, and is mostly inhabited by Germans. The land immediately around the city is level. A mile distant rises a chain of limestone hills, which furnish an excellent building material. San Antonio is the chief city of W. Texas, and has an extensive trade. Its most important manufactories are 3 large flouring mills, a soap and candle factory, a wood and stone cutting establishment, 2 ice factories, a meat extract factory, and 3 breweries. It has a nat. and 4 other banks. It is divided into four wards, and has a good fire department. There are a hospital and a female orphan asylum, under the control of the Roman Catholics, a Roman Catholic college and convent, two German-American schools, 5 free public schools, 10 churches, and 4 daily and 3 wkly papers. San Antonio was founded in 1714 by the Spaniards, and was incorporated as a city in 1873. Pop. in 1870, 12,256; in 1880, 20,561.

Sany Bernardino, Cal., a S.E. co., bordering N.E. on Nev., and E. on Ariz., from which it is separated by the Colorado R.; area, 23,000 sq. m. The greater part of the co., composing the N. and E. portions, consists of dry desert valleys and volcanic mountains. This region has little vegetation, and is interspersed with hot springs and deposits of sulphur and soda. There are some streams that lose themselves in "sinks." Death valley, in which the Amargosa R. disappears, is from 100 to 250 ft. below the level of the sea, is destitute of good water, and is extremely hot in summer. Gold and silver are found in the Sierra Nevada Mts. in the N. In the S.W. part of the county, here crossed by the Coast range, are extensive valleys having a delightful climate and a

fertile soil. The mountains contain an abundance of pine, cedar, hemlock, maple, &c. In this district are found gold, copper, tin, marble, and alabaster, and silver mines are worked successfully. The largest stream is the Santa Ana, which flows into the Pacific. The view of Mt. San Bernardino, the loftiest peak of the Coast range, is exceedingly grand. The chief prod. in 1880 were 82,563 bush. of barley, 45,582 of wheat, and 23,136 of corn. Cap., San Bernardino. Val. of taxable prop. abt. \$3,000,000. Sand Diego, Cal., a S. co., separated E. from Ariz., by the Colorado R. and bordering W. on the Pacific Ocean; area, 14,600 sq. m. Two branches of the Coast range cross it from N. to S. dividing it into three parts differing much in climate, soil, and topography. The division along the coast is abt. 25 m. wide, and consists largely of level plains or gently sloping valleys, watered by San Bernardo, San Diego, and other rivers; the greater portion is suitable for agriculture and grazing. The central or mountain division is very irregular in outline, averaging 40 m. in width. Both ranges are covered with forests of oak, cedar, pine, and fir, and contain gold, silver, copper, and other minerals. Gold is extensively mined. There are a number of broad valleys or tablelands, having a delightful climate and a fertile soil. They produce grapes, oranges, wheat, barley, &c. The E. division is occupied by the Colorado desert, which is for the most part treeless and barren, and part of it is below the level of the sea. It is very dry and hot, and contains many natural curiosities, among which is a lake of boiling mud abt. half a mile long by 500 yds. wide. Staple prod. are wheat, barley, wool, cattle, horses, hogs, honey, wine and fruit. Cap., San Diego. Val. of taxable prop. abt. \$5,000,000. Sandy Hook, N. J., is the extreme N. point of the N.J. coast, and consists of a strip of sandy beach projecting into the water, and separating the ocean from Sandy Hook Bay. It is abt. 20 m. from New York. The main ship channel lies directly across the end of the Hook, and through this is the entrance to the lower or maritime bay of New York. On the point of the Hook are 3 lighthouses, and inside the Hook and abt. 2 m. from the point is the terminus of the N.J.S. RR.—*Sandy Hook Bay*, lies just S. of the lower or maritime bay of New York. It is triangular in shape, the shortest side being along Sandy Hook on the E. and the longest along the N.J. mainland on the S.W. The Neversink Highlands are in the corner formed by these two sides. Outward-bound vessels leaving to proceed to sea frequently take advantage of the anchorage afforded by the upper part of the bay known as the Horseshoe.

San Francisco, Cal., the finest and largest bay on the Pacific coast, between lat. 37° 48' and 38° 10' N. and lon. 122° and 122° 30' W., is connected with the Pacific Ocean by a strait 1 m. wide called the Golden Gate. It extends S.S.W. abt. 40 m., being separated from the Pacific by a peninsula from 6 to 15 m. wide, on the N. extremity of the S. arm of which is the city of San Francisco. The bay opposite the city is abt. 7 m. wide, and in its widest part 12 m. The shores of the Golden Gate are bold and rocky, rising on the N. in some places nearly 2,000 ft. while on the S. the hills are from 300 to 400 ft. high, many of them being covered with shifting white sand. On the bar there is 30 ft. of water at low tide; within there is a much greater depth and good anchorage. The principal islands are Alcatraz, in the middle of the channel, abt. 4 m. from the entrance; Angel, the largest, containing 800 acres, and Yerba Buena, or Goat Island, opposite the city. There is a fortification on Alcatraz Island, and another at Fort Point on the S. side of the Golden Gate. The bay is connected on the N. by a strait 3 m. wide, with San Pablo Bay, which is nearly round and abt. 10 m. in diameter, and this receives from the E. through Carquinez Strait (1 m. wide) the waters of Suisun Bay, which is abt. 8 m. long from E. to W., and 4 m. wide; San Pablo and Suisun Bays are deep, but Carquinez Strait has only 16 ft. of water at low tide. At the head of San Pablo Bay is Napa, or Mare Island, in which is a U. States navy yard.

—the chief city and seaport of California and of the Western coast of North America, and the 9th city of the U. States in point of pop., designated in law as "the city and county of San Francisco," the functions of city and co. government, usually separated, being here consolidated. It is situated in lat. 37° 48' 26.6" N., lon. 122° 24' 39.6" W., on the end of a peninsula there, 6 m. wide and 20 m. long, separating the S. arm of the San Francisco Bay from the Pacific Ocean. The city stands on the E. or inner slope of the peninsula. Its area is 42 sq. m.—sandy, dusty, rocky in different parts, hardly green anywhere. The harbor is part of a bay 50 m. long and 5 m. wide, has an entrance 35 ft. deep at low tide and 1 m. wide, and on the anchorage along the city front there is abundant room, with excellent holding ground and a depth of 40 ft., which increases to 400 ft. in the narrowest part of the Golden Gate, as the beautiful entrance to the bay is styled. San Francisco is connected by ferry-boat with Oakland, a beautiful city on the E. side of the bay, with groves and

gardens, beautiful streets, and delightful climate, which is a favorite residence of persons doing business in the metropolis. The city is regularly laid out, though not on a uniform plan. The streets are broad, and cross each other at right angles. The business streets are generally paved with Belgian blocks or cobble stones, and most of the residence streets are planked. The leading thoroughfare is Montgomery St., which is broad and lined with handsome buildings. At its N. end it extends to the top of a hill, which is so precipitous that carriages can not ascend it. A flight of steps enables pedestrians to mount with comparative ease; and from the top there is a fine view over the city and bay. Kearney St. and Market St. are the fashionable promenades, and contain some of the principal retail shops. In California St. the principal banks and brokers and insurance offices are located. The importers and jobbers are in Front, Sansome, and Battery Sts. The "Chinese quarter," comprises portions of Sacramento, Commercial, Dupont, Pacific, and Jackson Sts. The characteristics of San Francisco in 1882 have been thus given by Mr. C. S. Gleed: "What Paris is to France, San Francisco is to the Pacific coast of the U. States; and the similarity does not end in the mere matter of size. The character of San Francisco as a city is like that of Paris. San Francisco is a gay city, the metropolis of a light-hearted people. It is a condensation of California. It is a city of sunshine, flowers, music, poetry, painting, literature, business activity and swift social currents—swift, if not deep. Two hundred and fifty thousand people, or thereabouts, are gathered together on the extremity of a tumulus, sandy, wave-washed point of land. The city on its many hills is like Rome, only more so; in its water-beleaguered condition is like Venice, only not quite so much so; in its Chinese quarter is like Peking or Hong Kong; in its fog malady for half the year is like London; in its love for music, art and literature is like Boston; in its business mania is like New York or Chicago. Crossing the bay from Oakland the stranger lands in San Francisco, and at once realizes that he is a stranger. The street cars run without visible means of support; up hill and down they go with all the intelligence, steadiness and quiet of "the oldest inhabitants," the secret of their activity being a noiseless underground cable. The hotels, from the Palace and the Baldwin down to the What-cheer house are unusual and unprecedented. The Palace is a hollow square, seven stories high, covered with glass, having a conservatory or hanging garden on the top floor, and a band of music in the rotunda. Count Smith, chief clerk, is as remarkable as any other part of the institution. He knows everybody, and forgets nothing. The Grand hotel is just across the street from the Palace, and is the handsomest hotel building in the city. The What-cheer house is the house where a guest's plate is filled with soup from a monster syringe. If the necessary five cents in payment is not at once forthcoming the syringe is again applied to the plate and the soup withdrawn. The theatres are large and handsome, though of late the theatrical business has considerably declined. The churches, from Mayor Kallioeh's tabernacle to the Chinese Joss houses, are well built and well supported. The clubs—Bohemian and others—are conducted on the most "generous, gorgeous and gigantic" plan. Hospitality is the object of their every endeavor. The schools of the city are modern in every respect. The mint is an institution where the stranger should go to see how it seems to get gold and silver handled like corn and potatoes. Chinatown must be visited at night with a policeman or some other functionary as a guide. Here you will see a simon-pure chunk of China, broken off and relocated in San Francisco. The stores with their queer commodities; the merchants with their counting machines; the theatres

with their senseless performances—stale, flat and unprofitable; the Joss houses, or churches, with their idols, symbols and magnificent specimens of carving; the restaurants, where nimble-fingered Chinamen "catee lice" (rice) with two small round sticks; the opium dens, where one comes as near getting a smell of Hell and a sight of the Devil as anywhere else in the world; the underground burrowings, where there are more Chinamen to the square yard than there are inhabitants in Kansas to the square mile; the great aggregation of crooked smells and noises, and over and above all the babblings of a strange and chilling tongue—these are the tints which compose the picture of Chinatown. San Francisco jewelry stores, photographic establishments and Japanese importing houses should all be visited. "Nobb hill," is the place where much of the wealth of California has its place of residence. The grave of Starr King, the new city hall, the wharfs and naval posts, all should be seen. Golden Gate park, the Cliff house and Seal Rocks should be visited, and then may come an endless variety of excursions—North, East, South—near at hand along the bay, or further off inland or along the coast. San Francisco is a wooden city, the peculiar climate making it advantageous to build of wood and finish with a cement which gives buildings the appearance of marble. The red wood used does not burn rapidly, and altogether this system of building which at first seems shoddy and unsubstantial is really the best possible one. This is San Francisco. It must be seen to be appreciated."—The Southern Pacific is the only railroad terminating within the city limits; the Central Pacific terminates at Oakland, and the California Pacific and San Francisco and North Pacific lines terminate on San Pablo Bay N. of the city. Abt. 50 ocean steamers run from the port in regular lines to Japan, Australia, Panama, Mexico, Victoria, and domestic ports in Oregon and California, and a score of light steamers to various ports on the inland waters that have their outlet at the Golden Gate. San Francisco was first settled in 1776 as a Spanish military station and a Franciscan mission to Indians. It made little progress till 1848, when the discovery of gold directed a great tide of immigration to the Pacific coast; and nature had given San Francisco almost an absolute monopoly of the harbor privileges of 2,000 m. of coast. Its growth was rapid; its enterprises were magnificent, its ventures the most daring, and its speculations the wildest, in modern commercial history. As the country gained age, and surface mining wore out, more distant and more costly mining was managed from San Francisco; and the losses and the gains in that city upon ventures in Nevada and Colorado have been enormous. A great traffic has grown up in the development of the permanent grain and fruit resources, as well as in its commanding relation to Asiatic commerce. San Francisco ranks third among all the ports of the Union in the total value of its foreign commerce, which for the year 1882 was \$83,092,032 (exports \$53,476,356; imports \$41,001,636). In that year 922 vessels of 1,116,903 tons, and 992 vessels of 1,200,419 tons cleared the port in the foreign trade. There were, belonging to the port, 860 vessels of 208,058 tons, including 165 steamers of 75,129 tons. The following are items of the foreign and domestic commerce and business of San Francisco: mineral prod. \$18,190,973; treasure exports, \$26,218,171; mint coinage, \$38,065,750; quicksilver exports, 52,180 flasks; coal receipts, 618,094 tons; wine exports by sea, 1,401,438 galls., and by rail 676,916 galls.; salmon shipped E., 216,301 cases; coffee imports, 12,393,822; coffee exports by sea 514,741 lbs., and by rail, 2,822,965 lbs.; rice imports, 48,811,107; shipments of hides by rail, 4,622,920 lbs., and of leather, 1,791,275 lbs.; wool exports by sea, 12,731,297 lbs., valued at \$2,313,959, and shipped by rail, 37,379,044 lbs.,

valued at \$6,600,000; lumber receipts, 212,151,817 ft.; tea imports, 19,977,672 lbs.; sugar imports, 54,487,442 lbs.; on which the Hawaiian Islands constituted 46,682,801 lbs. The value of manuf. establishments in 1880 was \$80,000,000, including sugar refineries, woolen and silk-mills, and manuf. of watches, carriages, boots, furniture, candles, acids, soap, wire-work, castings of iron and brass, silverware, etc. Many of the mines of gold, silver, quicksilver and coal, the deposits of borax and sulphur, the quarries of granite, marble, trap, slate, and steatite, the mining and irrigating ditches, the railways and macadamized roads, the quartz mills and saw mills, the vineyards, farms, orchards, and ranches, from Arizona to Idaho, and from the Pacific to the Rocky Mts., are owned here.—San Francisco had, in 1882, 21 commercial banks and bankers, and 8 savings banks with \$36,374,655 deposits. The city is divided into 12 wards, and governed by a mayor and a board of supervisors of 12 members. It is supplied with water from Filaretos near the base of the peninsula, by a conduit 30 m. long. The regular police force consists of 150 men, and there is a paid fire department with 11 steam engines, 5 hose, and 3 hook and ladder companies. The most important educational institution near San Francisco is the university of California, at Berkeley. In the city, besides the public schools which accommodate 30,000 pupils in regular attendance, are an excellent school of design, two medical colleges, and three academies. Among the charitable institutions the principal are the U. States marine hospital, the new city hospital, St. Mary's hospital (Roman Catholic), the State woman's hospital, the almshouse, the Protestant orphan asylum, and the Roman Catholic orphan asylum. The mercantile library has 40,000 volumes, the mechanics' institute library 30,000, the odd fellows' library 25,000, and the law library 15,000. In 1882 there were 103 newspapers and periodicals, of which 16 daily. The Golden Gate park, W. of the city, comprises 1,043 acres beautifully laid out. The Laurel Hill cemetery is in many respects unsurpassed. Within the inclosure of the cemetery is a singular mountain, of conical shape, which rises up singly and alone to a considerable height above the surrounding country, which is tolerably level. On its summit is a large wooden cross; and both mountain and cross are very conspicuous, and may be seen from almost any part of the city. Pop. in 1846, 600; in 1848, 1,000; in 1852, 34,870; in 1860, 56,802; in 1870, 149,473; in 1880, 233,956 (of whom 20,000 Chinese).

Saratoga Springs, N.Y., p.v. and tp., Saratoga co., on the A., the D.&H.C.Co., and the S., Mt. McG. & L.G.R.Rs., 32 m. N. by W. from Albany. This is the most celebrated watering-place in the U. States. There are here, within the distance of about half a mile, as many as 28 mineral (including 6 spouting) springs, with properties considerably various, and all highly efficacious in their remedial use. This place is the annual resort of thousands, especially during the months of July and August, who come in pursuit of health or pleasure, from every section of this country and of Europe. Large and splendid accommodations are provided in the various hotels and boarding-houses, which, in the season of company, are often thronged with visitors, presenting an animated scene of gayety, luxury, and display. The village, which is in the N. part of the tp. is situated on a sandy plain, in part surrounded by a beautiful grove of pines, having its principal street upon the W. margin of a narrow vale in which the springs are found. On this broad street most of the largest hotels are situated, with several of the churches and other public edifices, which give to it an imposing appearance. The springs issue from the limestone formation, which underlies the whole sur-

face of sandy soil upon which the village is built; most of them coming out near the margin of a small stream which runs through the village, in the narrow valley on the E. of the principal street. Some springs are chalybeate, others impregnated with iodine, sulphur, and magnesia, and all powerfully charged with carbonic acid gas. The most celebrated are the Congress, Empire, Hathorn, High Rock, Washington, Geyser, (spouting), and Pavilion Springs. These waters are highly efficacious in many inveterate cases of disease. But even this is not their most important benefit. They have an almost magic effect upon the healthy system, to renovate and invigorate its energies, when relaxed from long confinement to business, or from sedentary habits, and to remove the latent causes of languor and disease. Their chief medicinal properties are of the cathartic and tonic kinds. Large quantities of these waters are bottled, and exported. The v. contains 7 large and 25 small hotels, abt. 50 boarding houses, a large town hall, 2 assembly rooms, a female seminary, a water cure, 8 churches, a nat. bank, and 1 daily and 5 wkly papers. Pop. 8,421; of tp. 10,820.

Savannah, Cal., p.h. in El Monte tp., Los Angeles co., on S.P. RR., 11 m. E. of Los Angeles. P. 50.

Savannah, Ga., a city and port of entry, cap. of Chatham co., and the second city in size and commercial importance in the State, on the S. side of the Savannah R., 18 m. from its mouth, on the C. G., the C. & S. and the S. F. & W. RRs., 295 m. E.S.E. Atlanta and 115 m. S.W. Charleston, S.C. The city is built on a sandy plain 40 ft. above the level of the river. It is laid out with regularity and beauty, by streets crossing each other at right angles, and having between every other street a public square, generally enclosed and ornamented with trees. These open parks, with their verdant carpeting and shaded avenues, together with the rows of trees with which the streets generally are lined on both sides throughout, give to the city, during the spring and summer months, an airy, cool, and rural appearance. Of public buildings the most prominent are the custom-house and post-office, exchange, police barracks, theatre, Oglethorpe Barracks (U. S.), and market; private buildings of rare and beautiful architectural proportions are prominent. The position and the harbor of Savannah offer fine advantages for navigation and commerce. The harbor is one of the finest on the S. coast of the U. States. The entrance from the sea, over the bar, is full a mile wide, the depth of water is 19 ft. at mean low water, and 26 ft. at mean high water; within, at the Tybee Roads anchorage, the depth is 31 ft. and 38 ft. respectively. Only 12 ft. however, at mean low water and 18 ft. at mean high water can be carried up to the city, and much dredging is required to keep the channel open in certain places to this extent. The river flows between marshy lands, which are intersected by numerous creeks and artificial channels, and are cultivated chiefly for rice. Long narrow islands and spits almost level with the water occupy a large portion of the space between the opposite banks, and reduce the main channel for a considerable part of the way between the city and the mouth to a width of a quarter of a mile and even less. The chief defences of the river are Fort Pulaski, a strong fortification on Cocksport Island, at the mouth of the river, and Fort Jackson on the right bank, 4 m. below the city. Steamers run regularly up the river to Augusta, and to New York, Boston, Philadelphia, Florida, and southern ports.—The chief business of Savannah is the receipt and shipment of cotton, though the trade in turpentine lumber is also considerable. As a cotton port it ranks second in the U. States. The value of imports from foreign countries in 1880 was \$429,519; of exports, \$21,527,235. During the year 319 vessels of 400,048 tons entered, and 366 vessels of 431,450 tons cleared the port in the coastwise trade. The number of vessels belonging to the port in 1880 was 71, with an aggregate tonnage of 16,347. The chief manuf. establishments are several planing mills, foundries, and flouring and grist mills. There are 1 nat. and 5 other banks, 2 daily, 3 wkly and 2 monthly papers. The city is governed by a mayor and 12 aldermen, elected biennially. It has a good police force and efficient fire department with a fire alarm telegraph. There are 13 public schools (10 white and 3 colored), several private schools, and a medical college. Savannah has also three noteworthy and attractive monuments—one in memory of Count Pulaski, who fell in the American assault on the British works in that city on Oct. 9, 1779; another in memory of Gen. Nathaniel Greene; and the third in honor of the Confederate dead—erected in the magnificent park on the southern limits of the city. Pop. 30,709.

Savannah River, S. C. and Ga., a river, formed by the junction on the line between Anderson co., S.C. and Franklin co., Ga., of the Tugaloo and Kiowee, two small streams which rise at the S. extremity of N.C. From its source, at the junction of these two rivers, to its mouth it has a channel length of 450 m. while the distance in a direct line is only 250 m. With its tributaries it drains an area of over 8,000 sq. m. It flows S.S.E. forming the boundary between S.C. and Ga., and enters the Atlantic 18 m. below Savannah City. The Savannah is a turbid stream, and the current in the upper portion of the river and its tributaries is rapid and carries a great deal of silt, particularly during the season of freshets. Bars are therefore formed in the broader portions of the stream where the current is less rapid, and the stream becomes sluggish. At Savannah the mean rise and fall of tide is 6½ ft. The tidal wave ordinarily ascends to a point abt. 28 m. above Savannah city, or 45 m. from Tybee Roads. The river is navigable to Savannah for vessels drawing 18 ft. of water, and by small vessels to Augusta, 231 miles, and even far beyond the latter place for small craft.
